SPECIFICATIONS

GENERAL

Format	:	VHS/S-VHS Europe standard
Power consumption	:	90 W
Power requirment	:	AC 110 – 127 V/220 – 240 V~, 50/60 Hz
Dimensions	:	42.9 (W) X 18.8 (H) X 56.5 (D) cm
Weight	:	23 kg
Operating temperature	:	5°C to 40°C
Storage temperature	:	–20°C to 60°C
Tape speed	:	23.39 mm/sec
Recording & Playback time	:	Max. 180 min. with JVC SE-180/E-180
Fast forward/Rewind time	:	Less than 2.5 min. for 180 min. tape

VIDEO

Recording and playback	:	Rotary two-head helical scanning system
Luminance	:	FM recording
Colour signal	:	Phase shift, converted sub-carrier direct recording
Video signal system	:	PAL-type colour signal/PAL-type Y/C signal
Input		
Line	:	1.0 Vp-p, 75 ohms, unbalanced
Y/C 443	:	Y: 1.0 Vp-p, 75 ohms, unbalanced C: 0.3 Vp-p, 75 ohms, unbalanced (Burst)
Output		
Line	:	1.0 Vp-p, 75 ohms, unbalanced
Y/C 443	:	Y: 1.0 Vp-p, 75 ohms, unbalanced C: 0.3 Vp-p, 75 ohms, unbalanced (Burst)
Signal-to-noise ratio	:	More than 46 dB (S-VHS) More than 45 dB (VHS)
Horizontal resolution	:	More than 400 lines (S-VHS) More than 250 lines (VHS)
Reference video input	:	0.3 to 1.0 Vp-p, 75 ohms, unbalanced (with loop-through, with the SA-T22E)
External sync input	:	0.3 to 4.0 Vp-p, 75 ohms, unbalanced (with one loop-through, without the SA-T22E)

AUDIO

Input		
Line	:	–6/0/+4 dBs, 10 k-ohms/600 ohms, balanced (Hi-Fi/Normal)
Mic	:	–67 dBs, 10 k-ohms, unbalanced
Output		
Line	:	–6/0/+4 dBs, Low impedance, balanced (Hi-Fi/Normal)
Monitor	:	–6 dBs, Low impedance, unbalanced
Phones	:	∞ to –17 dBs, 8 ohms
Signal-to-noise ratio	:	More than 43 dB (NR-off, Normal at 3% distortion)
Dynamic range	:	More than 87 dB (Hi-Fi)
Frequency response	:	20 to 20,000 Hz (Hi-Fi) 40 to 12,000 Hz (Normal)
Wow & flutter	:	Less than 0.005% WRMS (Hi-Fi) Less than 0.3% RMS (Normal)

TIME CODE

Input	:	0 dB ± 6 dBs, 10 k-ohms, unbalanced
Output	:	0 dB ± 3 dBs, Low impedance, unbalanced

CONNECTORS

Video		
Line input	:	BNC-type connector
Line output	:	BNC-type connectors
Y/C 443 input/output	:	7-pin connectors
Monitor	:	BNC-type connector
Audio		
Hi-Fi input/output	:	XLR connectors
Normal input/output	:	XLR connectors
Monitor	:	RCA connector
Remote control	:	9-pin connector

ACCESSORIES

Provided accessories : 7-pin cable

Important Safety Precautions

Prior to shipment from the factory, JVC products are strictly inspected to conform with the recognized product safety and electrical codes of the countries in which they are to be sold. However, in order to maintain such compliance, it is equally important to implement the following precautions when a set is being serviced.

● Precautions during Servicing

1. Locations requiring special caution are denoted by labels and inscriptions on the cabinet, chassis and certain parts of the product. When performing service, be sure to read and comply with these and other cautionary notices appearing in the operation and service manuals.

2. Parts identified by the ⚠ symbol and shaded (▒) parts are critical for safety.
   Replace only with specified part numbers.
   Note: Parts in this category also include those specified to comply with X-ray emission standards for products using cathode ray tubes and those specified for compliance with various regulations regarding spurious radiation emission.

3. Fuse replacement caution notice.
   Caution for continued protection against fire hazard.
   Replace only with same type and rated fuse(s) as specified.

4. Use specified internal wiring. Note especially:
   1) Wires covered with PVC tubing
   2) Double insulated wires
   3) High voltage leads

5. Use specified insulating materials for hazardous live parts. Note especially:
   1) Insulation Tape
   2) PVC tubing
   3) Spacers
   4) Insulation sheets for transistors
   5) Barrier

6. When replacing AC primary side components (transformers, power cords, noise blocking capacitors, etc.) wrap ends of wires securely about the terminals before soldering.

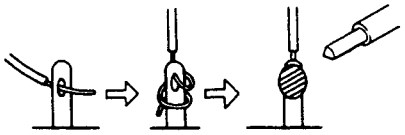

Fig. 1

7. Observe that wires do not contact heat producing parts (heatsinks, oxide metal film resistors, fusible resistors, etc.)

8. Check that replaced wires do not contact sharp edged or pointed parts.

9. When a power cord has been replaced, check that 10—15 kg of force in any direction will not loosen it.

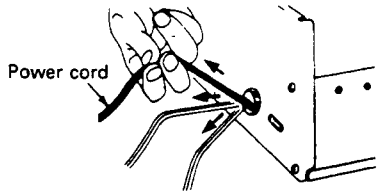

Fig. 2

10. Also check areas surrounding repaired locations.

11. Products using cathode ray tubes (CRTs)
    In regard to such products, the cathode ray tubes themselves, the high voltage circuits, and related circuits are specified for compliance with recognized codes pertaining to X-ray emission. Consequently, when servicing these products, replace the cathode ray tubes and other parts with only the specified parts. Under no circumstances attempt to modify these circuits. Unauthorized modification can increase the high voltage value and cause X-ray emission from the cathode ray tube.

12. Crimp type wire connector
    In such cases as when replacing the power transformer in sets where the connections between the power cord and power transformer primary lead wires are performed using crimp type connectors, if replacing the connectors is unavoidable, in order to prevent safety hazards, perform carefully and precisely according to the following steps.

    1) **Connector part number** : E03830-001
    2) **Required tool** : Connector crimping tool of the proper type which will not damage insulated parts.
    3) **Replacement procedure**
       (1) Remove the old connector by cutting the wires at a point close to the connector.
       Important : Do not reuse a connector (discard it).

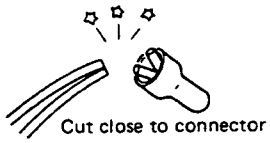

Fig. 3

(2) Strip about 15 mm of the insulation from the ends of the wires. If the wires are stranded, twist the strands to avoid frayed conductors.

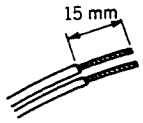

Fig. 4

(3) Align the lengths of the wires to be connected. Insert the wires fully into the connector.

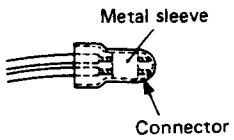

Fig. 5

(4) As shown in Fig. 6, use the crimping tool to crimp the metal sleeve at the center position. Be sure to crimp fully to the complete closure of the tool.

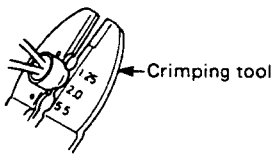

Fig. 6

(5) Check the four points noted in Fig. 7.

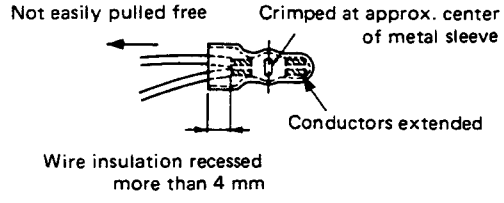

Fig. 7

● Safety Check after Servicing

Examine the area surrounding the repaired location for damage or deterioration. Observe that screws, parts and wires have been returned to original positions, Afterwards, perform the following tests and confirm the specified values in order to verify compliance with safety standards.

1. **Insulation resistance test**
   Confirm the specified insulation resistance or greater between power cord plug prongs and externally exposed parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table 1 below.

2. **Dielectric strength test**
   Confirm specified dielectric strength or greater between power cord plug prongs and exposed accessible parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table 1 below.

3. **Clearance distance**
   When replacing primary circuit components, confirm specified clearance distance (d), (d') between soldered terminals, and between terminals and surrounding metallic parts. See table 1 below.

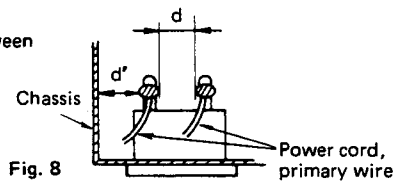

Fig. 8

4. **Leakage current test**
   Confirm specified or lower leakage current between earth ground/power cord plug prongs and externally exposed accessible parts (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.).
   Measuring Method: (Power ON)
   Insert load Z between earth ground/power cord plug prongs and externally exposed accessible parts. Use an AC voltmeter to measure across both terminals of load Z. See figure 9 and following table 2.

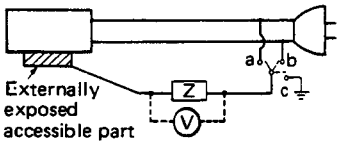

Fig. 9

5. **Grounding (Class I model only)**
   Confirm specified or lower grounding impedance between earth pin in AC inlet and externally exposed accessible parts (Video in, Video out, Audio in, Audio out or Fixing screw etc.).
   Measuring Method:
   Connect milli ohm meter between earth pin in AC inlet and exposed accessible parts. See figure 10 and grounding specifications.

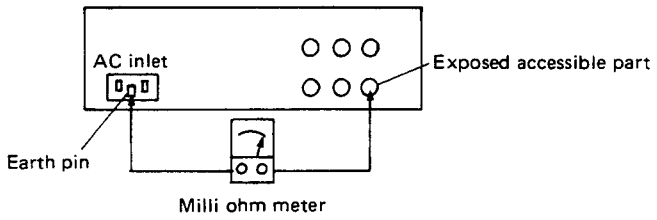

Fig. 10

Grounding Specifications

Region	Grounding Impedance (Z)
USA & Canada	Z ≦ 0.1 ohm
Europe & Australia	Z ≦ 0.5 ohm

AC Line Voltage	Region	Insulation Resistance (R)	Dielectric Strength	Clearance Distance (d), (d')
100 V	Japan	R≧1 MΩ/500 V DC	AC 1 kV 1 minute	d, d' ≧ 3 mm
100 to 240 V			AC 1.5 kV 1 minute	d, d' ≧ 4 mm
110 to 130 V	USA & Canada	–	AC 900 V 1 minute	d, d' ≧ 3.2 mm
110 to 130 V 200 to 240 V	Europe & Australia	R≧10 MΩ /500 V DC	AC 3 kV 1 minute (Class II) AC 1.5 kV 1 minute (Class I)	d ≧ 4 mm d' ≧ 8 mm (Power cord) d' ≧ 6 mm (Primary wire)

Table 1 Specifications for each region

AC Line Voltage	Region	Load Z	Leakage Current (i)	a, b, c
100 V	Japan	1 kΩ	i ≦ 1 mA rms	Exposed accessible parts
110 to 130 V	USA & Canada	0.15 μF, 1.5 kΩ	i ≦ 0.5 mA rms	Exposed accessible parts
110 to 130 V 220 to 240 V	Europe & Australia	2 kΩ	i ≦ 0.7 mA peak i ≦ 2 mA dc	Antenna earth terminals
		50 kΩ	i ≦ 0.7 mA peak i ≦ 2 mA dc	Other terminals

Table 2 Leakage current specifications for each region

Note: These tables are unofficial and for reference only. Be sure to confirm the precise values for your particular country and locality.

SAFETY PRECAUTIONS

Warning Notice
FOR YOUR SAFETY (Australia)

1. Insert this plug only into effectively earthed three-pin power outlet.
2. If any doubt exists regarding the earthing, consult a qualified electrician.
3. Extension cord, if used, must be three-core correctly wired.

IMPORTANT (In the United Kingdom)
Mains Supply (AC 240 V~)
WARNING - THIS APPARATUS MUST BE EARTHED

The wires in this mains lead are coloured in accordance with the following code;

GREEN-and-YELLOW:	EARTH
BLUE:	NEUTRAL
BROWN:	LINE

As the colours of the wires in the mains lead of this apparatus may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows.
The wire which is coloured GREEN-AND-YELLOW must be connected to the terminal in the plug which is marked with the letter E or by the safety earth symbol ⏚ or coloured GREEN or GREEN-AND-YELLOW. The wire which is coloured BLUE must be connected to the terminal which is marked with the letter N or which is coloured BLACK. The wire which is coloured BROWN must be connected to the terminal which is marked with the letter L or coloured RED.

POWER SYSTEM
Connection to the mains supply
The operating voltage of this set is preset to 220 – 240 V~ at the factory.
Before connecting to mains, check that the voltage selector on the rear panel is set to the same voltage as your local mains supply.
Adapting to local power line
This set operates on 110 – 127 V/220 – 240 V~ AC, 50/60 Hz.
If the preset voltage is different from the power line voltage in your area, reset the voltage selector by inserting a screwdriver into the slot of the voltage selector and turning it until the correct voltage is displayed.

This unit is produced to comply with Directives 76/889/EEC, 82/499/EEC, 87/308/EEC, and IEC Publ.65.

WARNING:
TO PREVENT FIRE OR SHOCK HAZARD, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE.

CAUTION
To prevent electric shock, do not open the cabinet. No user serviceable parts inside. Refer servicing to qualified service personnel.

Note:
The rating plate and the safety caution are on the bottom of the unit.

WARNING:
It should be noted that it may be unlawful to re-record pre-recorded tapes, records, or discs without the consent of the owner of copyright in the sound or video recording, broadcast, or cable programme and in any literary, dramatic, musical, or artistic work embodied therein.

HOW TO USE THIS MANUAL

This manual introduces you to the BR-S822E S-VHS Editing Recorder and shows you how to make the most of its many advanced features. Because the manual is written for the person who has some experience in videotape editing and is familiar with the terms and techniques described, explanations and definitions are kept to a minimum.

Also, some functions are available only when the corresponding optional boards are plugged in. Whenever these functions are referred to in the text, it is assumed that the corresponding boards have been installed.

- TBC functions are available only when the optional SA-T22E Time Base Corrector boards are installed.
- Component Y/R-Y/B-Y outputs are available only when the optional SA-T22E Time Base Corrector boards and accompanying component output connector board are installed.
- TC functions are available only when the optional SA-R22E Time Code Reader/Generator board is installed.
- 45-Pin parallel interface is possible only when the optional SA-K28E Interface board is installed.
- RS-232C interface is possible only when the optional SA-K27E Interface board is installed.
- Y/C 686/Y/C 924 Output is available only when the optional SA-E92E Output board is installed.

IMPORTANT

Instructions for all operations are based on the setup menu's initial settings unless otherwise specified. We recommend that you familiarise yourself with the available settings before operating the VCR. For more information, please refer to "Setup Menu", ☞ p.37

PRECAUTIONS

[redacted]

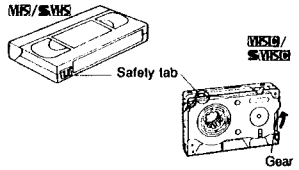
- Avoid using the recorder in places subject to the following conditions:
  - extreme heat, cold, or humidity,
  - dust,
  - vibrations, and
  - poor ventilation.
- Be careful of moisture condensation.
  Do not use the recorder immediately after moving it from a cold place to a warm place. The water vapor in warm air will condense on the still-cold video head drum and tape guides and may cause damage to the tape and the recorder.
- Handle the recorder carefully.
  - Do not block the ventilation openings.
  - Do not place anything heavy on the recorder.
  - Do not place anything which might spill on the top cover of the recorder.
  - Use in horizontal (flat) position only.
- During transportation,
  - Avoid violent shocks to the recorder during packing and transportation.
  - Before packing, be sure to remove the cassette from the recorder.

[redacted]

This recorder uses S-VHS, S-VHS-C, VHS, and VHS-C cassettes.
Only cassettes recorded in the standard play (SP) mode can be played on this recorder. LP recording is not possible.

S-VHS: SE-180 for 180 minutes, SE-120 for 120 minutes, SE-60 for 60 minutes, and SE-30 for 30 minutes of recording.
S-VHS-C: SE-C30 for 30 minutes of recording.
VHS: E-180 for 180 minutes, E-120 for 120 minutes, E-90 for 90 minutes, E-60 for 60 minutes, and E-30 for 30 minutes of recording.
VHS-C: EC-30 for 30 minutes of recording.

- To prevent accidental erasure, remove the cassette's safety tab. To record on a cassette whose safety tab has been removed, cover the hole with adhesive tape.
- Before loading a compact cassette, be sure the tape is not slack. If there is any slack, turn the gear on the cassette in the direction of the arrow to take up the slack.
- Avoid exposing the cassettes to direct sunlight. Keep them away from heaters.
- Avoid extreme humidity, violent vibrations or shocks, strong magnetic fields (near a motor, transformer or magnet), and dusty places.
- Place the cassettes in cassette cases and position vertically.



FEATURES

Newly-developed full-size/compact-compatible cassette loading mechanism

Similar in principle to the loading mechanisms employed in M-II, 3/4-inch, and other high-performance professional equipment, the BR-S822E's newly-developed cassette loading mechanism can directly accept both regular and C-sized S-VHS cassettes. The tape transport system has also been improved to provide faster search speeds and more stable transport. C-size S-VHS cassettes are already popular in image acquisition — as exemplified by the success of JVC's GY-X1 S-VHS-C camcorder — and are expected to assume a more important role in distribution, on-air transmission, and other applications. Since direct editing from C-size cassettes is possible with the BR-S822E, higher-quality edits are assured.

Open-ended system architecture with plug-in TC and TBC capability

To better meet the requirements of different edit suites, the BR-S822E has been designed to permit open-ended system expansion. Built-in interfaces are provided for 9-pin RS-422A serial remote, COMPOSITE IN/OUT, and Y/C443 IN/OUT. Further system expansion and customisation is facilitated by a variety of optional "snap-in" boards. These include a time code reader/generator (LTC/VITC), a TBC with field memory and COMPONENT OUT circuit, as well as a 45-pin remote control board, an RS-232C remote control board for connection to a computer, and a Y/C 686/Y/C 924 OUT processor board. Since these circuit boards can be slotted directly into the BR-S822E, it can easily be configured to fit into any existing system without the need for expensive alterations or additional space.

High-quality pictures

S-VHS picture quality* has been improved still further with the addition of advanced circuitry including a digital Y/C separator and digital DOC. Moreover, this high picture quality is maintained through multi-generational dubbing; even after as many as five generations, the results match those available from 3/4-inch equipment. For improved playback picture performance, noise reduction circuitry and switching noise masking are provided.

* Technology licensed by FARROUDJA Laboratories.
* Employs chroma-enhancing technology co-developed by JVC and FARROUDJA Laboratories and modified for S-VHS applications.

Fully-equipped for high-performance professional editing

The BR-S822E is equipped with a comprehensive set of studio-level editing functions. Search/jog dials are provided for fast and accurate location of edit points with maximum visual search speed increased to 32x. Edit quality is enhanced by features such as twin rotary erase heads, preroll, colour frame servo, auto H-Phase lock, and capstan bump functions. Convenient editing functions such as swap editing, preview, review, go-to, and edit point entry make high-performance editing possible even when an editing controller is not incorporated in the system.

Menu Display and On-Screen Mode Check

For easy set-up and customisation, the BR-S822E features a menu display which allows simple dial setting and switching of most basic functions while referring to indications on the counter display or on-screen. As a result, many seldom-used external switches have been eliminated. Even functions normally requiring DIP switch resetting can be switched directly via the menu display. On-screen mode check and warning indications are also provided.

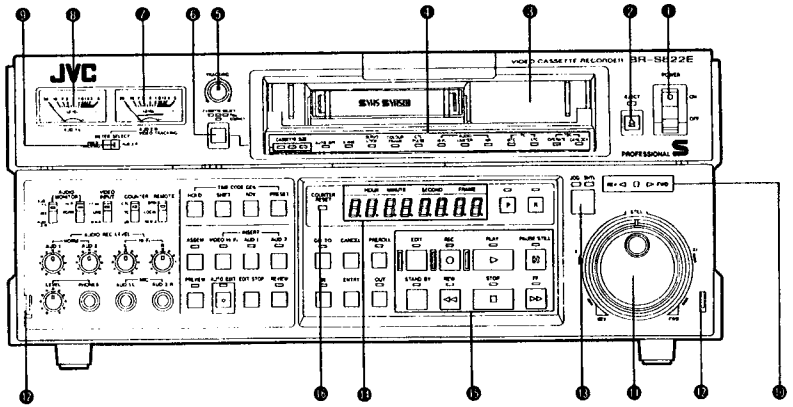
Other features

- 4-Field sequence colour frame servo
- Hi-Fi Stereo system with Hyper-tangent system to minimise switching noise for a dynamic range of more than 87 dB
- Two-channel normal audio with switchable Dolby B* noise reduction
- Independent audio level controls for all four channels
- XLR balanced audio connectors
- Two level meters switchable between Hi-Fi and Normal audio; the right meter can also function as a video level/tracking meter
- Video recording level control
- 8-Digit time counter for indication of editing data in either TC or CTL mode
- Built-in black burst signal generator
- Wide-aspect (16:9) ID recording capability
- External sync input for reference video
- Y-Frequency response control
- Tiltable control panel
- Heavy-duty full-loading mechanism with high-speed chassis
- Self-diagnostic warning system
- Front-access test points
- Automatic head cleaning mechanism
- 9999-hour meter switchable from tape counter
- Headphone jack with adjustable level output
- 19-inch EIA rack mounting

* Dolby noise reduction manufactured under license from Dolby Laboratories Licensing Corporation. "DOLBY" and the double-D symbol ⊡⊡ are trademarks of Dolby Laboratories Licensing Corporation.

CONTROLS AND CONNECTORS

FRONT PANEL



❶ POWER switch
- When power is ON, the time counter and level meters will be illuminated.

❷ EJECT button with LED indicator
- Ejects the cassette (from any mode).
- The indicator lights while the cassette is being ejected.

❸ Cassette loading slot
- Accepts either a compact or full-size S-VHS/VHS cassette according to the type selected with the CASSETTE SELECT button ❻.

❹ LED indicators

CASSETTE SIZE indicators
- Indicate whether the recorder is in the Full or Compact mode. When all three indicators are blinking, the recorder is ready to accept a full-size cassette. When only the centre indicator is blinking, the recorder is ready to accept a compact cassette. Press the CASSETTE SELECT button ❻ to change modes. When a cassette is inserted, the blinking will stop and the corresponding indicator(s) will remain continuously lit.

AUTO OFF indicator
- Lights when the unit malfunctions. All other controls are disabled.

S-VHS indicator
- Lights when an S-VHS or S-VHS-C cassette is inserted with the unit in the S-VHS mode, or when playing back a blank part of the tape.
- Blinks when S-VHS recording is attempted with a VHS cassette.

TBC indicators
(with optional SA-T22E TBC installed)

OPERATE: Lights when the TBC is in operation. A *timebase-corrected signal is output.*

GENLOCK: Lights when the TBC is in operation and locked to the external reference signal.

SERVO indicators

SERVO LOCK: Lights when the capstan and drum servos are locked to the reference signal.

CTL PULSE: Lights during playback of a tape with no control pulse recorded.

COLOUR FRAME: Lights when the capstan and drum servos are locked to PAL 4-field colour frame.

AUDIO indicators

Hi-Fi: Lights when the Hi-Fi REC circuit is ON (via menu setting) or when playing back Hi-Fi-recorded tapes.

LIMITER: Lights when the built-in audio limiter circuit is set to ON (via menu setting).

NR: Lights when the Dolby B* noise reduction circuit is set to ON (via menu setting).

TC (TIME CODE) indicators
(with optional SA-R22E TC [time code] generator/reader installed)

LTC: Lights green when LTC-recorded tapes are played back with the normal audio-2 track set for LTC use (via menu setting). If LTC is not picked up, the indicator lights orange. This indicator may also light green when normal-audio-recorded tapes are played back.

VITC: Lights when VITC-recorded tapes are played back or when recording a VITC signal.

❺ TRACKING control
- Adjusts tracking. Turn in either direction until the tracking meter deflects all the way to the right.
- Normally leave in the centre click-stop position.

❻ CASSETTE SELECT button
- Press to select FULL or COMPACT. The corresponding indicator(s) will light.

❼ AUD-2/R (VIDEO/TRACKING) level meter
- Indicates the audio level of the normal audio-2 or Hi-Fi right-channel signal during recording and playback.
- Functions as a video level meter during recording and as a tracking meter during playback when the METER SELECT switch ❽ is set to VIDEO/TRACKING.

❽ AUD-1/L level meter
- Indicates the audio level of the normal audio-1 or Hi-Fi left-channel signal during recording and playback.

❾ METER SELECT switch
- Switches the AUD-2/R level meter ❼ between audio level and video level indication.

AUD-2/R: Meter functions as the audio-2/Hi-Fi right-channel level meter.

VIDEO/TRACKING: Meter functions as a video level meter in recording, and as a tracking meter in playback.

❿ Tape direction indicators
- Indicate the current tape direction.

▷: Forward
□: Still
◁: Reverse

⓫ JOG/SHUTTLE dials
- Dual concentric controls. The outer functions as a Shuttle ring, the inner as a Jog dial. The Jog and Shuttle modes can be entered directly from the Play, Still, FF, REW, or Stop modes.

SHUTTLE ring: Search speed can be varied continuously from 1/30 to 32 times normal (up to 14 times normal with C-size cassettes) in forward or reverse. Set to the centre click-stop position to engage the Still mode.

JOG dial: Manual frame-by-frame search in either direction. Tape speed is determined by the speed of dial rotation. Releasing the dial engages the Still mode. Also used in edit point trimming, menu setting and TC/UB presetting.

⓬ Control panel lock release buttons
- To tilt the control panel, press these buttons and lift the panel at the same time. The panel can be tilted to 90° and locked at angles of 25°, 50°, and 75°.

⓭ JOG/SHUTTLE button with JOG/SHTL mode indicators
- Instantly re-activates the Shuttle mode with search speed determined by the current dial setting.

⓮ Time counter
- Shows tape time in hours, minutes, seconds, and frames.
- Displays edit-in and -out points.
- Displays user bits.
- Displays menu settings and warnings.

⓯ Operation buttons with LED indicators

PAUSE/STILL button
- Temporarily stops recording when pressed in the Record mode.
- Displays a still picture when pressed in the Play mode.

PLAY button
- Starts playback.
- Re-starts normal playback when pressed in the Still or Search mode.
- Starts recording when pressed together with the REC button.
- Starts editing when pressed together with the EDIT button in the Play mode (Run Editing).
- Re-starts recording when pressed in the Record-Pause mode.

REC button
- Starts recording when pressed together with the PLAY button.
- Outputs EE signals when pressed in the Play mode.
- Displays TC generator data when pressed in the Stop mode with REMOTE select switch ⓰ set to LOCAL. (Released by pressing STOP button.)

EDIT button
- Starts editing when pressed together with the PLAY button in the Play mode.
- Outputs EE signals (selected with the Edit Mode Select buttons) when pressed on its own in the Play mode.
- Displays TC generator data when pressed in the Stop mode. (Released by pressing STOP button.)

STAND BY button
- Switches the recorder between the Standby-On and Standby-Off modes while the VCR is in the Stop mode. Standby-On is automatically engaged when the Stop button is pressed.

Standby-On: The tape is loaded and the drum is rotating. The indicator is lit.

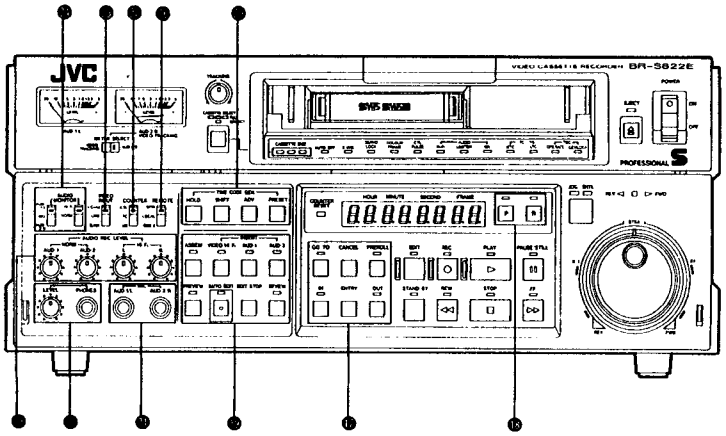
Standby-Off: The tape is loaded but tape tension is reduced and the drum does not rotate. The indicator is not lit.

REW button
- Starts rewind when pressed in any mode.

STOP button
- Engages the Stop mode (Standby-On). The tape stops, but remains in the full-loaded position with the drum rotating.
- The STOP and STAND BY indicators will light.

FF button
- Starts fast forward when pressed in any mode.

⓰ COUNTER RESET button
- Resets the CTL counter to zero.
- Clears the entered edit point.
- The CTL counter will be reset even if this button is pressed in the TC mode.



⑪ **Edit control buttons**

PREROLL button with LED indicator
- Prerolls the tape by about 7 seconds.

CANCEL button
- Press together with the IN or OUT button to clear the edit point from memory.

GO TO button
- Press together with the IN or OUT button to access the IN or OUT point.

ENTRY button
- Press together with the IN or OUT button to enter an IN or OUT point.

IN/OUT buttons with LED indicators
- Press together with the ENTRY button to enter the IN or OUT point.
- Press either button on its own to display the IN or OUT point.
- Press simultaneously to display edit duration.
- Turn the JOG dial while holding either button to trim the IN or OUT point.

⑫ **Player/Recorder select buttons**

For swap editing via the 9-pin connector.
- Press P to operate the Player with this recorder's controls.
- Press R to operate this recorder.

⑬ **Edit operation buttons with LED indicators**

Edit mode select buttons
- To select the editing mode.

ASSEM: All input video and audio signals are recorded.
VIDEO/HI-FI: Inserts the video signal and the Hi-Fi audio signal together.
AUD-1: Inserts the normal audio-1 signal.
AUD-2: Inserts the normal audio-2 signal or the LTC signal.

REVIEW button
- Reviews the executed edit.

EDIT STOP button
- Stops automatic editing.

AUTO EDIT button
- Executes automatic editing.

PREVIEW button
- Previews the programmed edit.

⑭ **Time Code setting buttons**

To preset time code/user bit data (with optional SA-R22E TC generator/reader installed).

HOLD button

This button is only effective when the SA-R22E's PRESET/REGEN switch is set to PRESET.
- Holds the current counter data; the leftmost digit will blink.

SHIFT button
- Shifts the blinking digit to the right. (You can also shift the blinking digit in either direction by holding down the SHIFT button and turning the JOG dial.)

ADV (ADVANCE) button
- Advances the value of the blinking digit. (You can also change the value in either direction by holding down the ADV button and turning the JOG dial.)

PRESET button
- Transfers the data set with the HOLD, SHIFT, and ADV buttons to the time code generator.
- Automatically cancels the Hold mode.

⑰ **MIC jacks (AUD-1/L, AUD-2/R)**
- For microphone connection. Input signal switches from line to microphone.

⑱ **PHONES jack/LEVEL control**
- Connect a set of headphones to monitor sound recording.
- Adjust output level with the LEVEL control.

⑲ **Hi-FI L/R and NORM AUD-1/AUD-2 AUDIO REC LEVEL controls**
- To separately adjust recording levels for the Hi-Fi left/right-channel signals and the normal (linear) audio-1/2 signals.
- Optimum level is the point where the corresponding meter's peak deflection is "0".

⑳ **AUDIO MONITOR select switches**
- To select the audio output for the PHONES jack and the AUDIO MONITOR OUT connector.
- The Hi-Fi/NORM switch also switches the audio level meters between Hi-Fi and NORMAL.

Hi-Fi: To monitor the Hi-Fi audio signals.
NORM: To monitor the normal audio signals.
AUD-1/L: To monitor the normal audio-1 or Hi-Fi left-channel signal.
MIX: To monitor the AUD-1/L and AUD-2/R signals together.
AUD-2/R: To monitor the normal audio-2 signal or Hi-Fi right-channel signal.

㉕ **VIDEO INPUT select switch**
- To select an input video signal for recording.

Y/C443: To record the signal input to the Y/C443 connector.
LINE: To record the signal input to the VIDEO IN LINE connector.
BLACK: To record the internally-generated black burst signal on a blank tape in preparation for insert editing. If set to this position during menu setting, on-screen information is output from all output connectors, not only the MONITOR OUT connector.

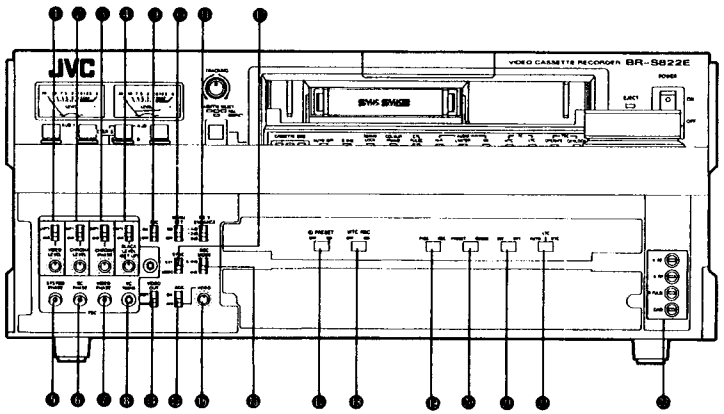
㉖ **REMOTE select switch**
- To select between remote and local control of the recorder.

9-PIN: For remote control via the rear panel 9-pin connector.
LOCAL: For direct control with the recorder's function buttons.
REM-2: For remote control via the optional 45-pin or RS-232C interface.

㉗ **COUNTER select switch**
- To select the time counter display mode with the SA-R22E TC generator/reader installed. If this is not installed, CTL signals are displayed regardless of the switch setting.

CTL: CTL signals are displayed on the time counter.
TC: Time code signals are displayed on the time counter.
UB: User bits are displayed on the time counter.

FRONT SUB-PANEL



TBC CONTROLS

The controls in this section function when the optional SA-T22E TBC (time base corrector) is installed.

❶ VIDEO LEVEL UNITY/VARIABLE select switch/level control

UNITY: The output signal's video level is the same as the playback signal. Normally set to this position.

VARIABLE: Allows you to adjust the output signal's video level with the VIDEO LEVEL control. Adjustment is possible within ±3 dB.

❷ CHROMA LEVEL UNITY/VARIABLE select switch/level control

UNITY: The output signal's chroma level is the same as the playback signal. Normally set to this position.

VARIABLE: Allows you to adjust the output signal's chroma level with the CHROMA LEVEL control. Adjustment is possible within ±3 dB.

❸ CHROMA PHASE UNITY/VARIABLE select switch/level control

UNITY: The output signal's chroma phase is the same as the playback signal.

VARIABLE: Allows you to adjust the output signal's chroma phase with the CHROMA PHASE control. Adjustment is possible within ±30°.

❹ BLACK LEVEL VARIABLE/UNITY select switch/level control

UNITY: The output signal's setup level is the same as the playback signal.

VARIABLE: Allows you to adjust the output signal's setup level with the BLACK LEVEL (SET UP) control. Adjustment is possible within ±107 mV.

❺ SYSTEM PHASE control

- Adjusts the output signal's horizontal phase with respect to that of the reference input signal. Adjustment is possible within a range of ±3 µsec.

❻ SC PHASE

- Adjusts the output signal's subcarrier phase with respect to that of the reference input signal. Up to 15 rotations are possible with continuous variation over a range of ±180°.

❼ VIDEO PHASE control

- Adjusts the output signal's video phase with respect to the playback signal's H sync. Up to 15 rotations are possible with continuous variation over a range of ±1.5 µsec.

❽ YC TIMING control

- Adjusts the output signal's C signal delay time with reference to the Y signal. Adjustable within ±500 nsec.
- Normally set to "8".

❾ TBC ON/OFF switch.

- Set to ON for TBC playback. (During TBC operation, the servo is locked to the reference signal supplied to the EXT REF connector even if the SYNC select switch is set to VIDEO.)
- Pressing any of the edit select buttons defeats TBC operation.
- Set to OFF to bypass TBC.

❿ MENU SET ON/OFF switch

- SET to ON to activate the On-Screen Menu. The counter display will also switch to the Menu Set mode.
- Most basic system setup operations are performed using the Menu.

⓫ PB Y ENHANCE switch

- Enhances the luminance signal for a sharper playback picture.

+4 dB: Boosts luminance signal level by 4 dB at 2.5 MHz for maximum picture sharpness.

+2 dB: Boosts luminance signal level by 2 dB at 2.5 MHz for a sharper picture.

0 dB: No effect. The same result is obtained by setting the VIDEO OUT select switch ⓮ to EDIT.

⓬ SYNC select switch

EXT: The servo is synchronised with the external reference signal supplied to the EXT REF input.

VIDEO: The servo is synchronised with the input video signal.

⓭ REC MODE select switch

S-VHS: To record in the S-VHS mode. (Use S-VHS cassettes only)

VHS: To record in the VHS mode.

⓮ VIDEO OUT select switch

EDIT: Set to this position when using this VCR as a feeder or recorder in editing.

NORM: Normally set to this position.

⓯ VIDEO AGC ON/OFF switch

- Set to ON to activate the built-in VIDEO AGC circuit.
- Set to OFF to adjust the luminance video recording level manually.

⓰ VIDEO control

- Use to adjust video recording level, referring to the VIDEO/TRACKING meter. The centre click-stop is the standard position. The VIDEO AGC switch must be OFF to use this control.

TIME CODE GENERATOR/READER SETTING SWITCHES (With SA-R22E TC generator/reader installed)

⓱ ID PRESET ON/OFF switch

ON: To record the ID code specifically preset for each VCR.

OFF: To use the user bits memory for standard procedures in the Preset mode.

⓲ VITC REC ON/OFF switch

ON: To record VITC time codes.

OFF: VITC time codes are not recorded.

NOTE:

This switch has no effect on LTC recording (enabled by setting menu item #206 to "01 – LTC").

⓳ FREE/REC switch

- This switch is effective only when the PRESET/REGEN switch is set to PRESET and the INT/EXT switch is set to INT.

FREE: The time code runs in real time, regardless of the video recorder's operating mode.

REC: The time code runs only during recording.

⓴ PRESET/REGEN switch

PRESET: To use the internal TC generator in the Preset mode (with the INT/EXT switch set to INT), or to use an external TC generator via the TIME CODE IN connector (with the INT/EXT switch set to EXT).

REGEN: To use the internal TC generator in sync with either the playback time codes (with the INT/EXT switch set to INT), or externally input time codes (with the INT/EXT switch set to EXT).

㉑ INT/EXT switch

INT: To use the internal TC generator.

EXT: To use an externally-connected LTC/VITC generator.

㉒ AUTO/LTC/VITC switch

- To select the TC reader mode. Select the mode according to the type of reference time code with which the internal TC generator is synchronised in the Regen mode.

AUTO: For tapes with matching VITC and LTC data. Counts time codes in VITC at tape speeds lower than normal, and in LTC at speeds higher than normal. Missing sections are interpolated with CTL counts.

LTC: For LTC-only tapes or when editing with LTC data. Counts time codes in CTL at tape speeds lower than normal and higher than 10 times normal, and in LTC at speeds higher than normal. Missing sections are interpolated with CTL counts.

VITC: For VITC-only tapes or when editing with VITC data. Counts time codes in VITC at tape speeds lower than 10 times normal, and in CTL at speeds higher than 10 times normal. Missing sections are interpolated with CTL counts.

㉓ Test points

V-RF test point

- Outputs the video head FM signal during playback.
- Can be used for detection of clogged or worn heads.

A-RF test point

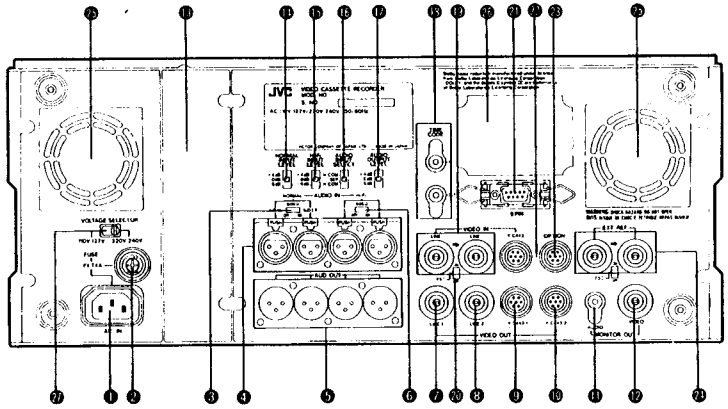
- Outputs the Hi-Fi audio FM signal during playback.
- Can be used for detection of clogged or worn heads.

D-PULSE pin

- Connect to the external trigger terminal of an oscilloscope.

GND

- Connect to the ground terminal of an oscilloscope.



❶ AC IN socket
- Connect to 110 – 120 V or 220 – 240 V AC, 50/60 Hz power outlet.

❷ Fuse holder

❸ NORM AUDIO INPUT impedance select switch
ON: 600 ohms.
OFF: 10 k-ohms. Normally set to this position.

❹ Audio input connectors
AUDIO IN NORMAL: Normal audio input connectors for Audio-1 and Audio-2.
AUDIO IN Hi-Fi: Hi-Fi audio input connectors for Left and Right.

❺ Audio output connectors
AUDIO OUT NORMAL: Normal audio output connectors for Audio-1 and Audio-2.
AUDIO OUT Hi-Fi: Hi-Fi audio output connectors for Left and Right.

❻ HI-FI AUDIO INPUT impedance select switch
ON: 600 ohms.
OFF: 10 k-ohms. Normally set to this position.

❼, ❽ VIDEO OUT LINE (1, 2) connectors
- The composite video signal is output from these connectors.

❾, ❿ VIDEO OUT Y/C443 (1, 2) connectors
- The Y/C443 signal is output from these connectors.

⓫ AUDIO MONITOR OUT connector
- The audio signal selected with the AUDIO MONITOR select switches is available at this connector.

⓬ VIDEO MONITOR OUT connector
- The composite video output signal is available at this connector. On-screen information is also supplied.

⓭ Expansion slot
- For installation of optional interface (SA-K28E or SA-K27E).

⓮ NORMAL INPUT LEVEL select switch
- To select -6 dB, 0 dB, or +4 dB according to the level of the normal audio input signal. Both channels are switched simultaneously.

⓯ HI-FI INPUT LEVEL select switch
- To select -6 dB, 0 dB, or +4 dB according to the level of the Hi-Fi audio input signal. Both channels are switched simultaneously.

⓰ AUDIO INPUT SELECT switch
H COM: "Hi-Fi Combined" recording. Set to this position to record audio signals input to the AUDIO IN Hi-Fi connectors on both the Hi-Fi and Normal audio tracks.
SEP: "Separate" recording. Set to this position to record audio signals input to the AUDIO IN Hi-Fi and NORMAL connectors separately on the Hi-Fi and Normal audio tracks.
N COM: "Normal Combined" recording. Set to this position to record audio signals input to the AUDIO IN NORMAL connectors on both the Hi-Fi and Normal audio tracks.

⓱ AUDIO OUTPUT LEVEL select switch
- To select -6 dB, 0 dB, or +4 dB according to the input level of connected audio equipment. All four audio channels are switched simultaneously.

⓲ TIME CODE IN/OUT connectors
Set menu item #206 to "01 – LTC" to record LTC time codes on the normal audio-2 track.
- Connect a time code generator to the IN connector for external time code recording.
- Connect a time code reader to the OUT connector for external time code reading.

⓳ VIDEO IN LINE connectors
- The composite video signal is input to the left connector.
- To output the loop-through signal to another unit, set the 75-ohm terminating switch to OFF.

⓴ 75-Ohm terminating switch
ON: The loop-through signal is terminated at the BR-S822E.
OFF: The loop-through signal is output to another unit.

㉑ 9-PIN connector
- Connect to an RS-422 9-pin serial remote control unit or to the RS-422 9-pin connector of a feeder for swap editing.

㉒ VIDEO IN Y/C443 connector
- The Y/C443 signal is input to this connector.

㉓ OPTION connector
- Delivers the Y/C 686/Y/C 924 signal (with optional SA-E92E Output board installed) to the DUB IN connector of 3/4" U-VCR machines.

㉔ EXT REF connectors with 75-ohm terminating switch
- Supply the reference signal (either black burst signal or composite video) to the left connector and set the 75-ohm terminating switch to ON.
- To output a loop-through signal to another unit, set the 75-ohm terminating switch to OFF.

NOTE:
- When using the SA-T22E, do not use a black-and-white signal or sync signal without burst as the reference signal, otherwise the intended synchronisation will not be obtained.

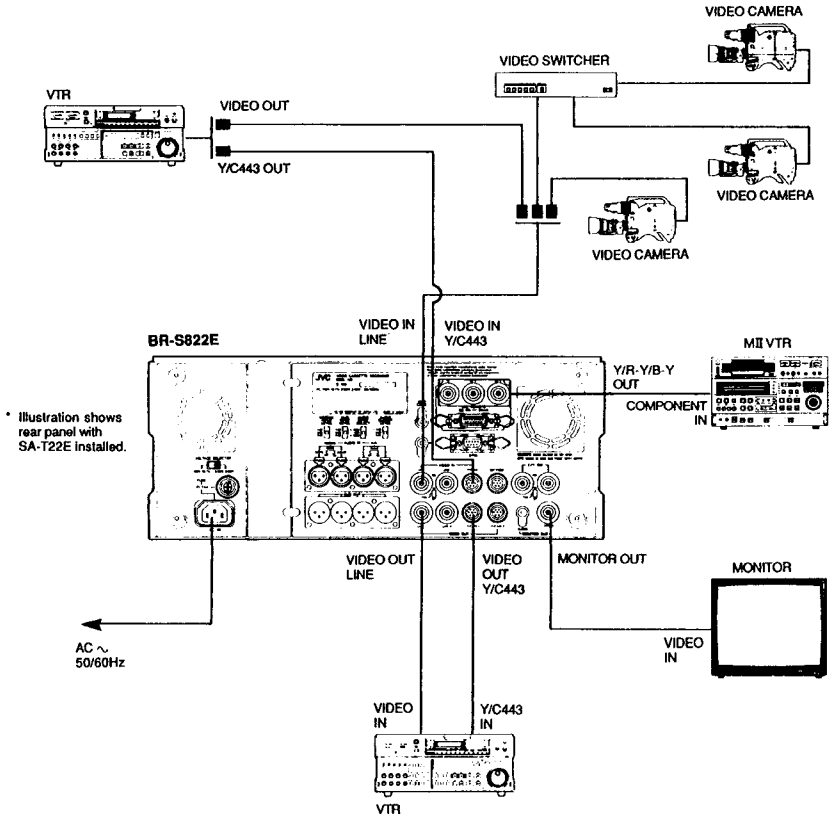
㉕ Fans

㉖ Expansion slot
For installation of COMPONENT OUT connector board when optional SA-T22E TBC is installed.
- Y/R-Y/B-Y output connectors: MII or Betacam component signal is output.
- TBC remote terminal: Connect a 15-pin remote controller for TBC operation.

㉗ VOLTAGE SELECTOR
- Select voltage according to your local power supply. (Be sure the POWER is off when setting the voltage.)

CONNECTIONS

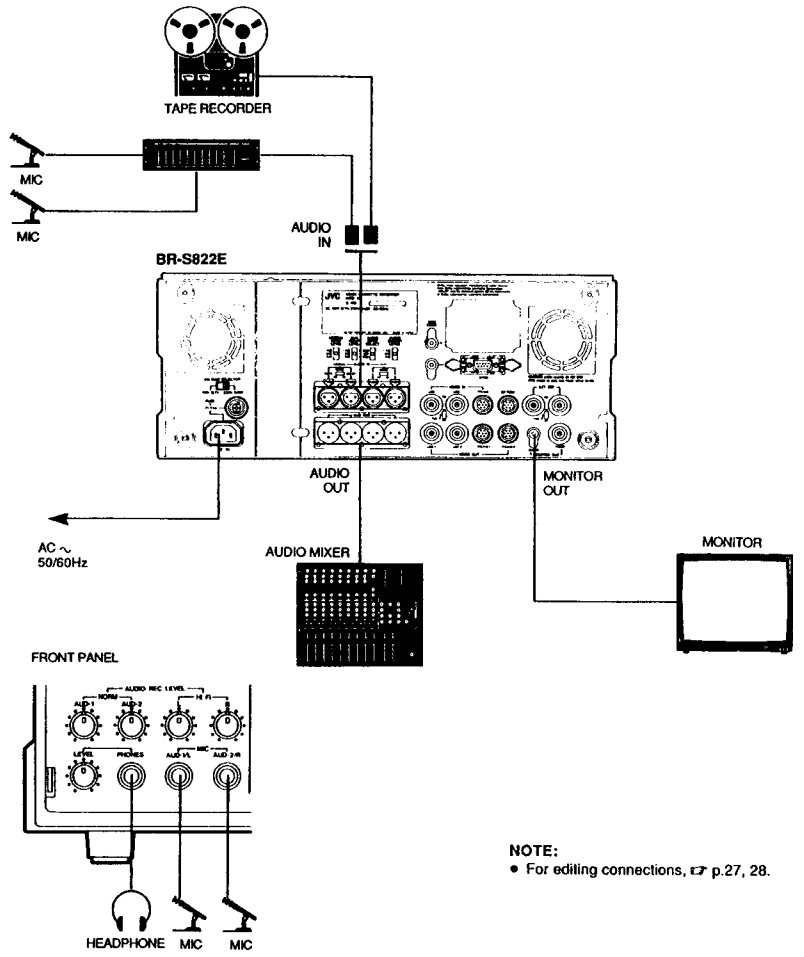
VIDEO EQUIPMENT



NOTES:

- To output the loop-through signal, set the 75-ohm terminating switch to OFF, otherwise set it to ON. (Be sure to terminate the signal at the last of the connected units.)
- On-screen information is output from the VIDEO MONITOR OUT connector only.
- Y/R-Y/B-Y component signals can be output when the optional TBC board SA-T22E is installed. M-II and Betacam component signals are selectable via menu item #104. (☞ p.39)

AUDIO EQUIPMENT



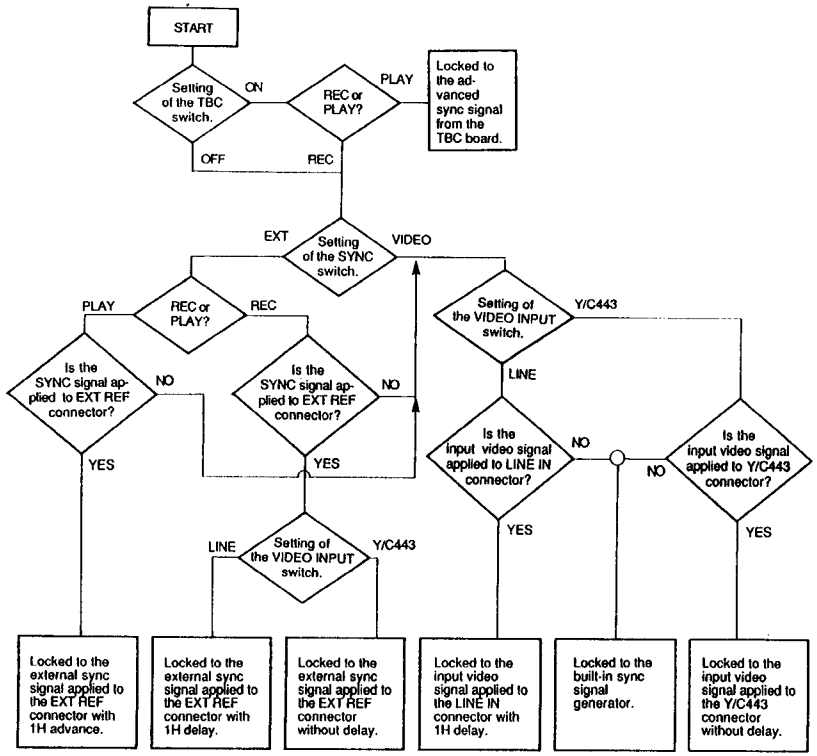
NOTE:

- For editing connections, ☞ p.27, 28.

NOTES:

- The MIC jack has priority over the rear panel AUDIO IN connectors. When a microphone is connected, the input signal is automatically shifted from AUDIO IN to MIC.

REFERENCE SYNC SIGNALS FOR RECORDING AND PLAYBACK



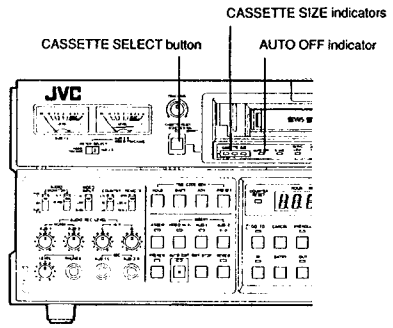
LOADING AND UNLOADING VIDEO CASSETTES

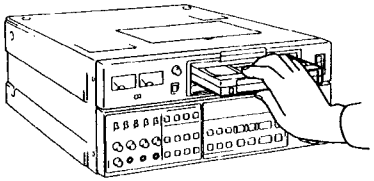
LOADING

1. Switch on the power.
2. Check the AUTO OFF indicator.
   - If this indicator lights, some abnormal condition such as condensation has occurred. All functions except Eject are disabled.
3. Check the CASSETTE SIZE indicators.
   - If you're loading a full-size cassette, be sure that all three indicators are blinking.
   - If you're loading a compact cassette, be sure that only the centre indicator is blinking.
   - Press the CASSETTE SELECT button to change modes.
4. Insert a cassette with its label side facing you.
   - The cassette is automatically retracted and loaded.
   - The VCR enters the Stop/Standby-On mode. The STOP and STAND BY indicators will light. In this mode, the tape is fully loaded and the head drum is rotating. The CASSETTE SIZE indicator(s) will stop blinking but remain illuminated.
   - Output signal changes from EE to playback.

NOTES:
- Be sure that the CASSETTE SIZE indicator(s) is blinking when inserting a cassette.

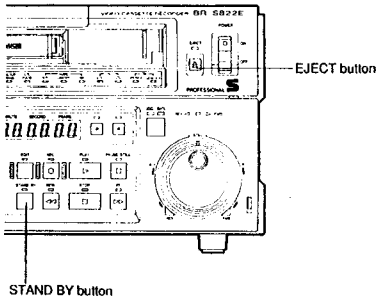
5. To cancel the Standby-On mode, press the STAND BY button.
   - The head drum will stop rotating, but the tape remains in the full-loaded position. The STAND BY indicator will go out.
   - As soon as you engage another mode (Play, Rewind, Fast Forward, Record, etc.), the STAND BY indicator will come on again.





UNLOADING

1. Press EJECT.
   - The cassette is ejected automatically.
   - You can press the EJECT button in any mode.
   - Output signal changes from playback to EE.
2. Remove the cassette.

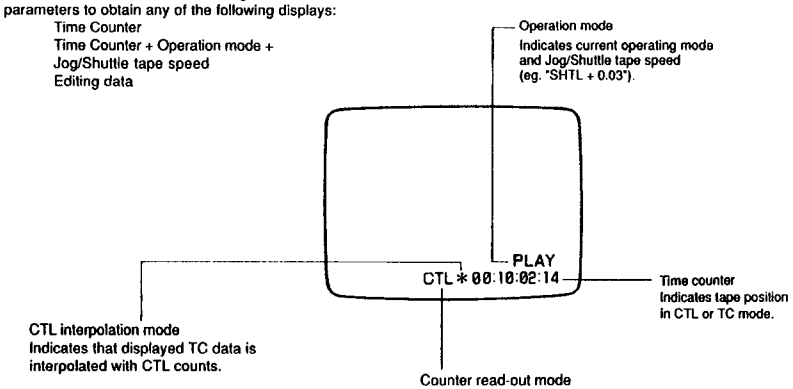


WARNING
- Do not insert fingers or foreign objects into the cassette loading slot as this may result in personal injury or damage to the mechanism.
- Do not try to remove the cassette once automatic loading has started.

ON-SCREEN DISPLAYS

You can choose the display mode via menu setting. The time counter, operation mode, and Jog/Shuttle tape speed displays are available with the initial setting. You can reset the menu parameters to obtain any of the following displays:

Time Counter
Time Counter + Operation mode + Jog/Shuttle tape speed
Editing data



Counter read-out mode

CTL	:	CTL reader data
VTCR	:	VITC reader data
LTCR	:	LTC reader data
TCG	:	Time code generator data
ETCG	:	External TC data
VUBR	:	VITC user bits reader data
LUBR	:	LTC user bits reader data
ID	:	ID data
UBG	:	User bits generator data

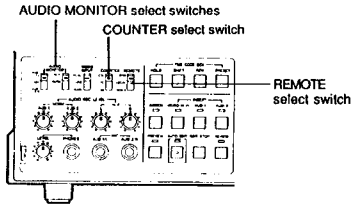
NOTE:

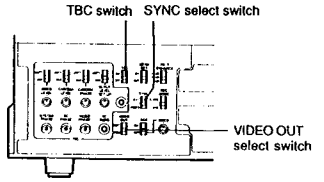
- For edit data display, ☞ p. 33.

PLAYBACK

PREPARATION

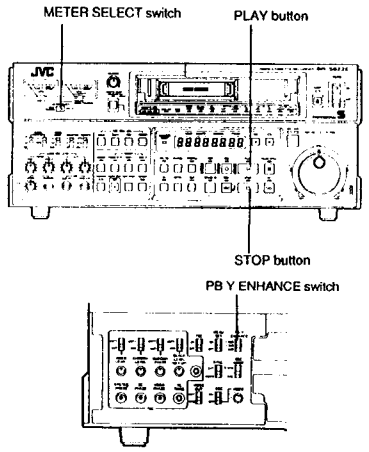
1. Set the SYNC select switch as required. (☞ p.10)
2. Set the AUDIO MONITOR select switches as required. (☞ p.8)
3. Set the COUNTER select switch as required. (☞ p.8)
4. Set the VIDEO OUT select switch as required.
   NOR: for normal playback.
   EDIT: when using the VCR as an edit feeder.
5. Set the REMOTE select switch as required. (☞ p.8)
6. Set the TBC switch to ON if you are using the SA-T22E or an external TBC.





PROCEDURE

1. Press the PLAY button.
   - Normal playback starts.
2. Check the tracking level.
   - Set the METER SELECT switch to VIDEO/TRACKING.
   - Adjust the TRACKING control until the tracking meter (AUD-2/R) deflects fully to the right.
   - Check the monitor screen to be sure that the picture is not blurred or marred by noise bars.
3. Set the PB Y ENHANCE switch as required.
   - If the VIDEO OUT select switch is set to EDIT, this switch has no effect.
4. Press the STOP button to stop playback.



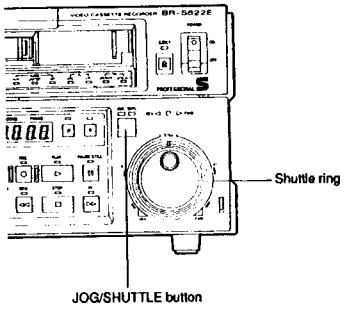
NOTES:

- LP recordings cannot be played back.
- To monitor the input signal during playback, press the REC button while in the Play mode.
- Do not press the REC and PLAY buttons simultaneously, otherwise the VCR will enter the Record mode.
- The VCR is preset to enter the Stop mode at tape end. If you want the VCR to automatically rewind when the end of the tape is reached, set menu item #312 to "01 – REW". (☞ p.40)

SHUTTLE SEARCH

The Shuttle Search mode is automatically activated when you turn the outer Shuttle ring in the Play, Still, FF, REW, or Stop mode. Turn the ring to adjust tape speed and direction as required.

- The STILL position (centre click-stop) provides a still picture.
- Turn the dial clockwise to search in the forward direction; counterclockwise to search in the reverse direction.
- The X1 click-stop provides normal speed search in the forward direction. X–1 provides normal speed search in the reverse direction.
- Another click-stop is located between X1 and the maximum position. This provides search at 4 times normal speed.
- When the dial is turned fully clockwise or counterclockwise, maximum search speed (about 32 times normal with full-size cassettes and 10 times normal with C-size cassettes) is provided.
- To change modes, press the button corresponding to the desired mode (PLAY, STOP , REW, FF)
- For immediate reactivation of the Shuttle mode at the search speed corresponding to the current dial setting, press the JOG/SHUTTLE button.



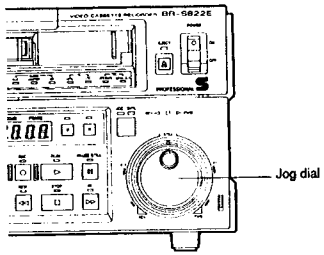
JOG SEARCH

Turn the inner Jog dial to adjust tape speed and direction as required.

- The VCR enters the Jog mode and the JOG indicator lights.
- Tape speed varies in relation to how quickly you turn the dial.
- When the dial is released, the VCR enters the Still mode.

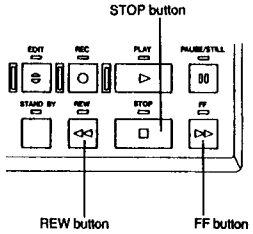
NOTES:

- Leaving the VCR in the Still mode for too long may damage the tape. To prevent this, the tape is automatically shifted to another video track when the Still mode continues for more than 5 minutes. (selectable with menu item #307, ☞ p.40.)



REWIND AND FAST-FORWARD

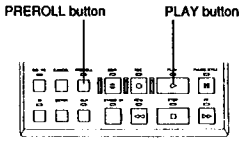
1. To rewind the tape at high speed, press REW in any mode.
2. To advance the tape at high speed, press FF in any mode.
3. Press STOP to stop rewind or fast-forward.



PREROLL PLAYBACK

This function allows you to cue programmes for feeding or insertion and ensures that the tape is stabilised when the picture is transmitted.

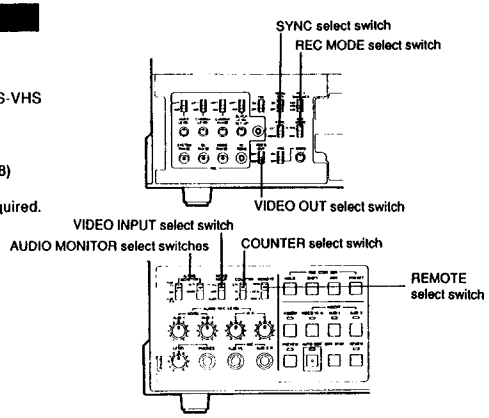
1. Locate the point where you wish playback to begin.
2. Press PREROLL.
- The tape will rewind about 7 seconds of programme time and enter the Stop mode. (Preroll time is selectable via menu item #320, ☞ p.41)
3. Press PLAY exactly 7 seconds before the scheduled insertion time.
- Playback starts. When transmission starts, the picture will be fully stabilised.



RECORDING

PREPARATION

1. Set the REC MODE select switch.
   VHS: To record in the VHS SP mode.
   S-VHS: To record in the S-VHS SP mode. (Use S-VHS cassette only)
2. Set the SYNC select switch as required. (☞ p.10)
3. Set the COUNTER select switch as required. (☞ p.8)
4. Set the VIDEO INPUT select switch as required. (☞ p.8)
5. Set the REMOTE select switch as required. (☞ p.8)
6. Set the AUDIO MONITOR select switches as required. (☞ p.8)
7. Set the VIDEO OUT select switch as required.
   NOR: For normal recording.
   EDIT: For recording with the aparture control circuit OFF.
8. Set menu item #000 to "01 — 4 FIELD". (☞ p.38)



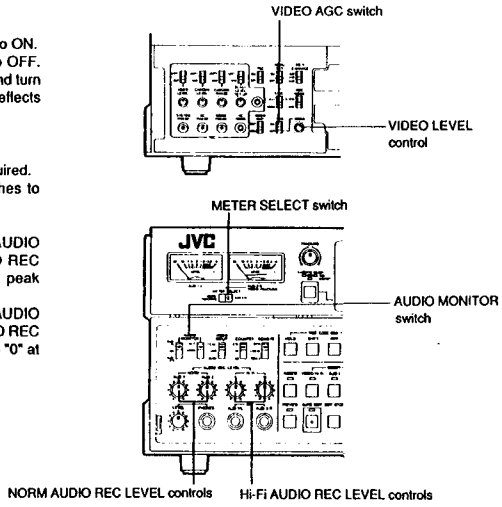
RECORDING LEVEL ADJUSTMENTS

Video Level Adjustment

- For automatic level control, set the VIDEO AGC switch to ON.
- For manual level control, set the VIDEO AGC switch to OFF. Set the METER SELECT switch to VIDEO/TRACKING and turn the VIDEO control until the VIDEO/TRACKING meter deflects to "0" with EBU-standard colour bar input.

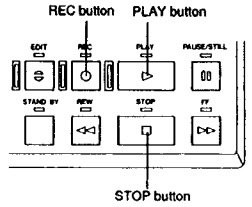
Audio Level Adjustment

- Set the rear panel AUDIO INPUT SELECT switch as required.
- Set the rear panel AUDIO INPUT LEVEL select switches to match the input signal level.
- Set the METER SELECT switch to AUD-2/R.
- For Hi-Fi audio recording level adjustment, set the AUDIO MONITOR switch to Hi-Fi and adjust the Hi-Fi AUDIO REC LEVEL L/R controls until the meters deflect to "0" at peak signal level.
- For normal audio recording level adjustment, set the AUDIO MONITOR switch to NORM and adjust the NORM AUDIO REC LEVEL AUD-1/AUD-2 controls until the meters deflect to "0" at peak signal level.



PROCEDURE

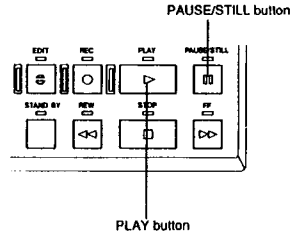
1. Press the REC and PLAY buttons simultaneously to start recording.
   - Both the REC and PLAY LEDs will light.
   - To temporarily stop recording, press PAUSE/STILL.
   - To resume recording, press PLAY.
2. Press the STOP button to stop recording.



RECORD-PAUSE & ASSEMBLE EDITING

The BR-S822E is equipped with an AEF function which automatically backspaces the tape about 3 seconds whenever the Record-Pause mode is engaged. In combination with the rotary erase head, this assures clean, smooth editing transitions.

1. Press the PAUSE/STILL button during recording. Recording will stop but the REC indicator will remain lit.
   - The tape automatically rewinds about 3 seconds of programme time and stops in the Record-Pause mode. Both the REC and PAUSE/STILL LEDs will light.
2. Press the PLAY button to restart recording.
   - The recorder will play back the tape for 3 seconds, then switch automatically to the Record mode at the point where the PAUSE/STILL button was originally pressed.
   - During the 3-second playback prior to re-engagement of the Record mode, the picture seen on the screen is not the playback picture, but the input signal.



TIME CODE/USER BITS

TIME CODE

This system simplifies location and specification of video frames by marking each frame with an 8-digit code number or "address". Essential for accurate editing, these "addresses" represent absolute tape positions and are displayed in hours, minutes, seconds, and frames, allowing you to specify exactly where edits are to start and stop by entering the IN and OUT time code values.
There are two different time code systems: LTC and VITC.

LTC (Longitudinal Time Code)
Time code addresses are recorded on a dedicated linear track by a fixed head. With the BR-S822E, the audio-2 track can be switched to LTC recording.

VITC (Vertical Interval Time Code)
The VITC is recorded during the video signal's vertical blanking period by a rotary head. Besides leaving the audio-2 channel free for editing, this permits accurate readout during still and search at speeds less than normal.

The time code used for the BR-S822E and the SA-R22E time code reader/generator conforms to the EBU standard.

USER BIT

"User bits" is a portion of the time code signal allocated to the user. It can be used to record the operator number or reel numbers.

ID CODE

User bits can also be used to identify the operating VCR. You can preset the VCR's ID code and record it on tape by setting the ID preset ON/OFF switch (on the TC board) to ON. Once the ID code has been preset, it need not be re-set unless you want to change it.

TIME CODE EDITING

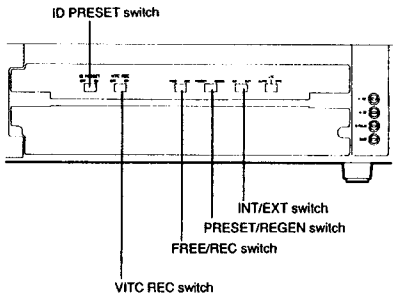
Accurate editing in reference to time code data is possible with editing suites controlled via 9-pin serial interface.
- Install the SA-R22E TC board in the BR-S822E.
- Use another VCR with TC reading capability as the player, eg. the BR-S822E or BR-S622E with SA-R22E TC board installed.
- For swap editing, connect the recorder and player via 9PIN connectors. Set the COUNTER switch to TC.
- For externally controlled editing, use a 9-pin serial editing controller. Switching between TC and CTL modes can be done with the controller.
- Time code editing is also possible with RS-232C interface using the optional SA-K27E.

NOTES:
When editing with VITC using SA-T22E's TBC, set menu item #601 V BLANK MASK to "00 — OFF". (☞ p.44)

TIME CODE/USER BITS RECORDING/PLAYBACK

PRESET RECORDING

This technique lets you record time code data starting from a newly specified value.
1. Put the VCR in the Stop mode.
2. Set the INT/EXT switch to INT.
3. Set the PRESET/REGEN switch to PRESET.
4. Set the FREE/REC switch to the desired position.
   FREE: Time code runs in real time, regardless of VCR's operating mode.
   REC: Time code runs only during VCR recording.
5. Set the VITC REC switch to the desired position.
   ON: Records VITC on the tape.
   OFF: VITC is not recorded.
   - Do not record the VITC signal on lines 7, 8, or 11. Line 11 is used for AUTO EQ. (S-VHS only)
   - To record LTC, set menu item #206 to "01 — LTC" (☞ p. 39).
6. Set initial time code/user bit values.

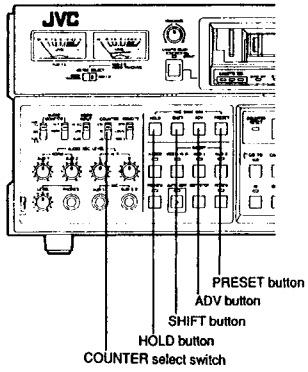


NOTES:
- The time code/user bits signal input to the rear panel TIME CODE IN connector can be recorded in its original form by setting the PRESET/REGEN switch to PRESET and the INT/EXT switch to EXT.
- Time code colour frame data may not always match VCR colour frame data.

Setting Initial Time Code/User Bit Values

- Engage the EE mode by pressing the REC button in the Stop mode. TC generator data is displayed on the counter.

1. Set the COUNTER select switch to TC or UB.
   TC: To set the time code.
   UB: To set the user bits. (When using user bits for ID, also set the ID PRESET switch to ON.)
2. Press the HOLD button.
   - The current counter data is held; the leftmost digit will blink in the Preset mode.
3. Press the ADV (ADVANCE) button.
   - This advances the value of the blinking digit. Set to the desired value. (You can also change the value in either direction by holding down the ADV button and turning the JOG dial.)
4. Press SHIFT.
   - The blinking digit shifts to the right. (You can also shift the blinking digit in either direction by holding down the SHIFT button and turning the JOG dial.)
5. Repeat steps 3 & 4 until all data is set.
6. Press the PRESET button.
   - The preset data will be transferred to the time code generator.
   - In the Free Run mode, time code starts running.
7. Press the STOP button to finish setting.
8. Proceed with recording or editing. (☞ p.21, 26)



NOTES:
- If the COUNTER RESET button is pressed during TC data setting, the counter is reset to "00:00:00:00".
- In user bits setting, all 8 digits can be changed from "0" to "F".
- TC data is cleared when the VCR's power is turned off.

REGENRATED RECORDING

Internal Regenerate Mode
This technique lets you record time code data on a new edit in sync with the playback time code data on the preceding edit. In automatic editing, jam-sync is also available.
1. Set the INT/EXT switch to INT.
2. Set the PRESET/REGEN switch to REGEN.

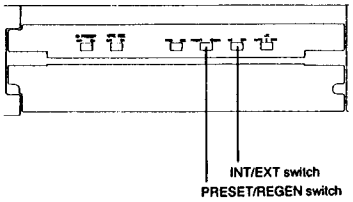
NOTES:
- When editing, use the Regenerate mode.
- If there is discontinuity in time code during preroll, go-to, or edit, the intended result may not be obtained.

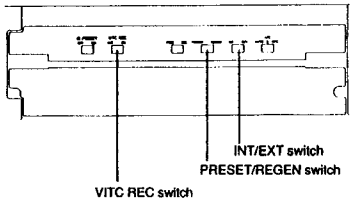
External Regenerate Mode
This technique lets you record time code data regenerated in sync with externally input time codes.
1. Connect an external LTC time code generator or the TIME CODE OUT connector of another VCR to the TIME CODE IN connector.
2. Set the COUNTER switch to TC.
3. Set the INT/EXT switch to EXT.
4. Set the PRESET/REGEN switch to REGEN.
5. Set the VITC REC switch as required.
6. Press the REC button in the Stop mode.
- The REC indicator lights and the counter shows time code running in sync with the external TC generator.

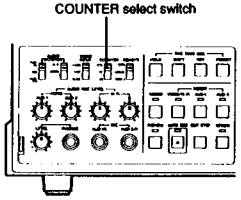
NOTES:
- When using an external VITC time code generator, menu item #409 must be re-set to "01 — VITC" (☞ p.43) and the VIDEO IN connector must be used instead of the TIME CODE IN connector.
- The EE picture does not include the VITC signal.

PLAYBACK

- When tapes with time code are played back, the rear panel TIME CODE OUT connector outputs the playback time code signal in its original form. The counter shows time code being read by the internal TC reader (with COUNTER switch set to TC).
- If you need regenerated time code from the TIME CODE OUT connector, re-set menu item #405 to "01 – TCG" (☞ p.43), and set the front panel INT/EXT switch to INT and the PRESET/REGEN switch to REGEN. To dub time code, or to supply the playback time code signal to another VCR, use this mode for more assured time code recording.







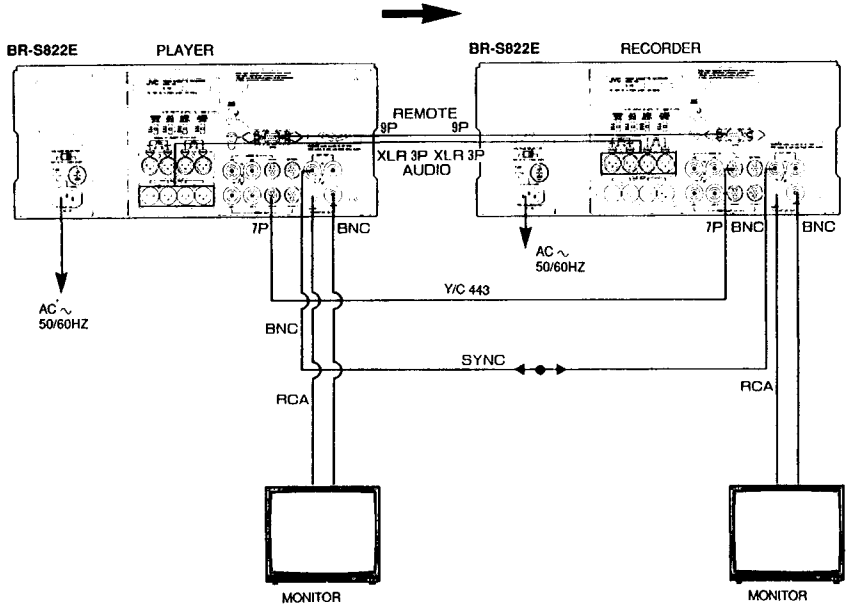
NOTES:
- All time code data is cleared when power is switched off.
- For more options, refer to TIME CODE menu settings. (☞ p.43)

GUIDE TO EDITING

QUICK GUIDE TO EDITING TECHNIQUES

Technique	Operation	
Manual preroll editing	• Without 9-pin connection:	Accurate insert or assemble editing of input camera or tape signals is possible using the BR-S822E's PREROLL and AUTO EDIT buttons.
Manual run editing	• Without 9-pin connection:	Insert or assemble editing of input camera or tape signals is possible directly from the Play mode.
Automatic swap editing	• With 9-pin connection:	All operations for both player and recorder can be controlled directly at the recorder. Once edit IN and OUT points have been entered, editing is automatic. Automatic insert and assemble editing are both possible.
A/B roll editing (See instructions of the editing control unit.)	• With 9-pin editing controller:	Automatic editing from two source players is possible. When a special effects generator is incorporated in the edit suite, special effects such as mixes, wipes, and fades can be applied to the edits. An audio mixer can be also incorporated in the edit suite for enhanced audio flexibility.

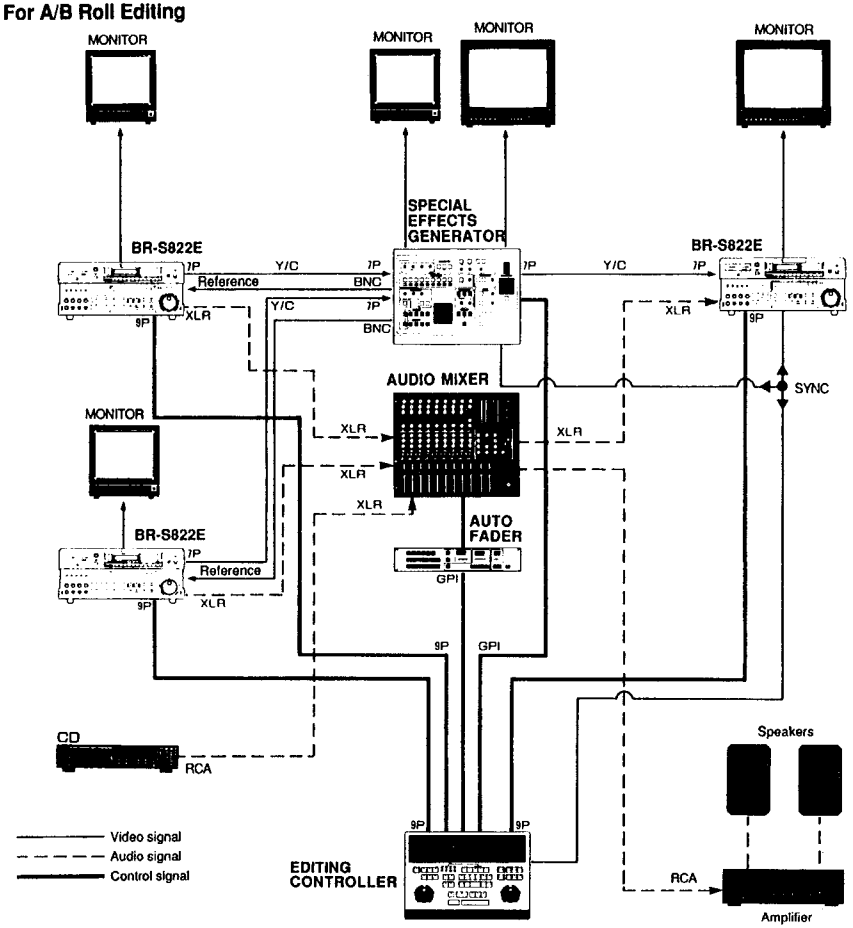
For Swap Editing



NOTES:

- To avoid distortion of the recorder's playback signal while the player is in the search mode, connect an external sync signal generator.
- If the player doesn't have an auto H-phase function, editing with the external sync signal may produce skew at the top of the edited picture.
- To avoid distortion or missing colours caused by unstable input signals, the player's signal should be processed by a TBC. (If you are using the BR-S822E or BR-S622E as the player, install the optional TBC board SA-T22E or connect an external TBC to the player. Set the player's TBC switch to ON.)
- Be sure to set the recorder's INT/EXT switch to INT in cases where the player doesn't have a TBC or the colour frame is not locked to EXT SYNC (eg. when connecting to the BR-S811E and SA-F911E.).

For A/B Roll Editing

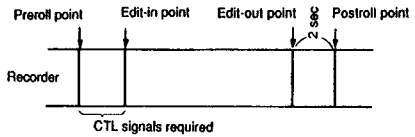


NOTES:

- If the special effects generator includes a TBC, set the player's TBC to OFF.

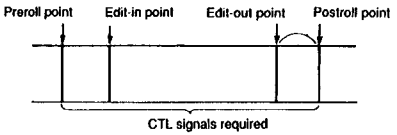
PREPARING RECORDING TAPES FOR EDITING

For Assemble Edits
When starting assemble editing from the beginning of a tape, or after a blank in the middle of tape, CTL signals must be recorded before the first edit-in point for a period exceeding the preroll time.



- Since the full erase head operates in assemble editing, a non-recorded segment is produced after the postroll point. If assemble editing is applied in the middle of a recorded tape, the picture will be distorted after the postroll point.

For Insert Edits
Record CTL signals before editing. At minimum, CTL signals must be continuously recorded in the section shown in the figure below.



- To record CTL signals on blank tape, set the VIDEO INPUT switch to BLACK and engage the Record mode.
- The edit-in point cannot be specified at the very beginning of a tape. Allow for a section corresponding to the preroll time before the first edit-in point.
- The LTC signal may leak onto normal audio-1 during LTC insert editing. When playing back such a tape, turn the TRACKING control fully clockwise.

- Preroll time
  It takes a few seconds for tape running to stabilize after starting. To ensure that tape running is stable before it reaches an edit point, the tape must start running before the edit-in point (prerolling). The preroll time can be set via menu item #320. (☞ p.41)

- Colour frame editing
  If the player and the recorder's colour frames do not match, missing colour or colour phase reverse may occur at the edit IN point. In this case, set menu item #000 to "01 — 4 FIELD". (☞ p.38)

MANUAL EDITING

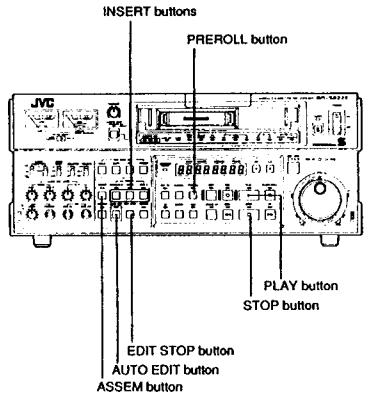
When editing from a camera or a VCR not connected to one of the BR-S822E's remote terminals, it is still possible to edit smoothly and accurately using the BR-S822E's AUTO EDIT and PREROLL buttons (Preroll Editing). Run editing is also possible using the EDIT button.

- Connect all necessary components correctly.
- Make all necessary preparations for recording. (☞ p.21)
- Set menu item #000 to "01 — 4 FIELD". (☞ p.38)

PREROLL EDITING

1. Select the editing mode.
   - Press ASSEM for assemble editing. All available input channels will be recorded.
   - Press one or more of the INSERT buttons for insert editing. Only the selected input channels will be recorded.
   VIDEO/Hi-Fi: The previously-recorded video/Hi-Fi audio signal will be replaced. Video and Hi-Fi cannot be inserted separately.
   AUD-1: The previously-recorded audio-1 soundtrack will be replaced.
   AUD-2: The previously-recorded audio-2 soundtrack or LTC will be replaced.
2. Press PLAY.
   - Playback starts.
3. Search for the edit IN point.
   - Use the Jog/Shuttle controls to locate the IN point.
4. Engage the Still mode at the IN point.
5. Press PREROLL.
   - The recorder will automatically rewind 7 seconds of programme time and enter the Stop mode.
6. Operate the player or camera as required.
7. Press AUTO EDIT to start editing.
   - The tape is played back for 7 seconds. Recording starts automatically at the edit IN point.
8. Press EDIT STOP to stop editing.
   - The recorder enters the Still mode.
   - To continue preroll editing, repeat steps 3 to 7.
9. To end preroll editing, press STOP .

NOTES:
- Insert editing is not possible if the recording tape does not have properly-recorded CTL signals.
- Insert editing will stop automatically if a tape segment without properly-recorded CTL is reached.



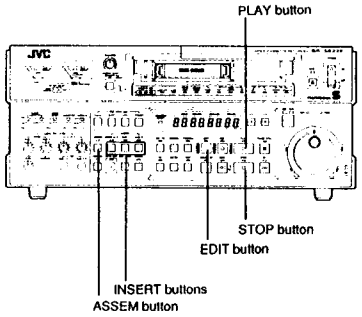
RUN EDITING

This type of editing allows you to edit directly from the Play mode. It is particularly useful in situations where you're editing stable, unchanging camera images (titles, stills, etc.) onto a prerecorded tape.

- Connect all necessary components correctly.
- Make all necessary preparations for recording. (☞ p.21)

1. Select the editing mode.
   - Press ASSEM for assemble editing. All available input channels will be recorded.
   - Press one or more of the INSERT buttons for insert editing. Only the selected input channels will be recorded.

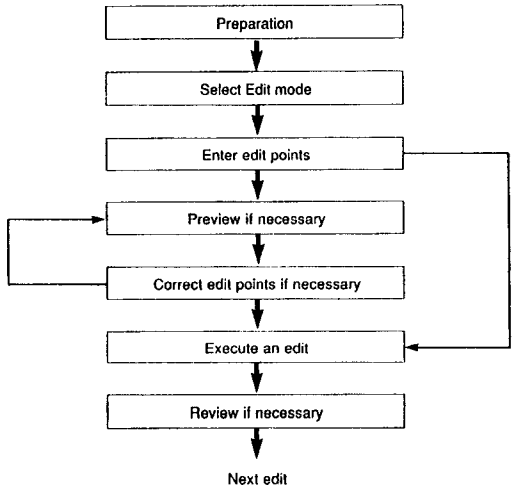
   VIDEO/Hi-Fi: The previously-recorded video/Hi-Fi audio signal will be replaced.
   AUD-1: The previously-recorded audio-1 soundtrack will be replaced.
   AUD-2: The previously-recorded audio-2 soundtrack or LTC will be replaced.
2. Press PLAY.
   - Playback starts.
3. Press EDIT and PLAY simultaneously to start editing.
4. To stop run editing, press PLAY or STOP .



AUTOMATIC EDITING

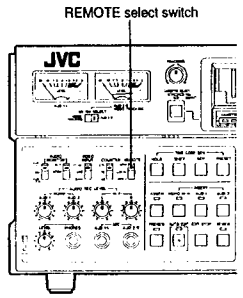
This recorder is fully equipped for programmed automatic assemble and insert editing in conjunction with a player equipped with a 9-pin serial remote connector (such as the BR-S622E). IN and OUT points can be preset for frame-accurate automatic editing and full control over all player operations is possible directly from the recorder.

OPERATION FLOWCHART



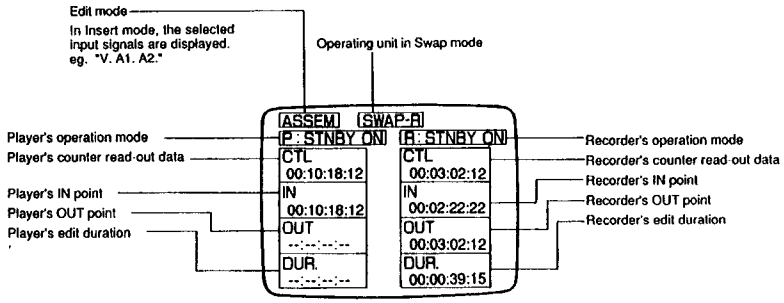
PREPARATION

- Make sure all components are connected correctly.
- Connect the BR-S822E's 9-pin connector to the player's 9-pin connector.
- Set the player's REMOTE select switch to 9-PIN.
- Set the player's menu item #000 to "01 — 4 FIELD".
- Set the BR-S822E's REMOTE select switch to LOCAL.
- Make all necessary preparations for recording. (☞ p.21)



ON-SCREEN EDIT DATA DISPLAY

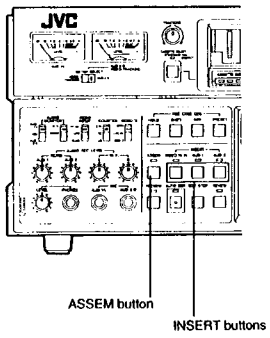
All edit data including IN/OUT points for both player and recorder can be displayed on-screen when the REMOTE select switch is set to LOCAL.
To display edit data on-screen, set menu item #504 to "02 – EDIT DATA". For details on menu setting operation, refer to "Setup Menu". (☞ p.37)



PROCEDURE

Edit Mode Selection

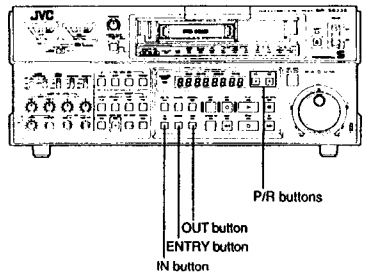
1. Select the editing mode.
   - Press ASSEM for assemble editing. All available input channels will be recorded.
   - Press one or more of the INSERT buttons for insert editing. Only the selected input channels will be recorded.
     VIDEO/Hi-Fi: The previously-recorded video/Hi-Fi audio signal will be replaced.
     AUD-1: The previously-recorded audio-1 sound-track will be replaced.
     AUD-2: The previously-recorded audio-2 sound-track or LTC will be replaced.



Edit Point Entry

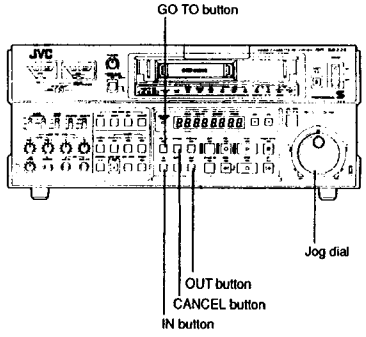
Enter the edit IN points for both the player and recorder, and the edit OUT point for either unit.
1. Press P (Player) or R (Recorder) to select the VCR to be operated.
   - The corresponding indicator will light.
2. Use the search functions to locate the edit IN point. (☞ p.19)
   - Engage the Still mode at the IN point.
3. Press IN and ENTRY simultaneously.
   - The edit IN point is entered.
4. Use the search functions to locate the edit OUT point.
   - Engage the Still mode at the OUT point.
5. Press OUT and ENTRY simultaneously.
   - The edit OUT point is entered.

NOTES:
- Edit point entry is also possible while the unit is in the Play mode.



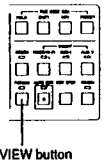
Edit Point Correction

When a new edit point is entered, the previous edit point is automatically cancelled.
- To check the picture at an edit point, press the GO TO button while holding the IN or OUT button.
- To cancel an edit point without entering a new one, press the IN or OUT button together with the CANCEL button.
- To trim the IN or OUT point, turn the JOG dial while pressing the corresponding button.



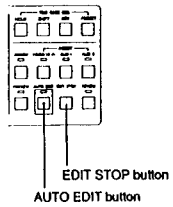
Edit Preview

1. Press PREVIEW.
   - The player and recorder rehearse the programmed edit, then enter the Still mode.
   - This step can be omitted if desired.
2. Press STOP at any time to stop Preview.



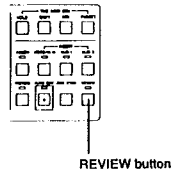
Executing An Edit

1. Press AUTO EDIT.
   - Automatic editing takes place. Editing starts and stops at the entered IN and OUT points.
   - If desired, you may switch input channels at any time during insert editing.
   - In assemble editing, the recorder continues recording for about 2 seconds after the OUT point, then rewinds and enters the Still mode at the OUT point. (This function can be defeated with the menu item #329 set to "01 – DISABLE".)
   - In insert editing, the recorder switches to the Play mode at the OUT point and continues playback for about 2 seconds after the OUT point, then rewinds and enters the Still mode at the OUT point. (This function can be defeated with the menu item #329 set to "01 – DISABLE".)
   - Press the EDIT STOP button if you want to cancel the editing operation before the designated OUT point. The recorder will enter the Still mode.



Edit Review

1. Press REVIEW on completion of the edit.
   - The VCR will play back the completed edit for review.
   - This step can be omitted if desired.



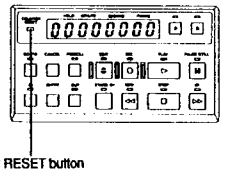
COUNTER DISPLAY

The BR-S822E's time counter shows tape time in hours, minutes, seconds, and frames in both CTL and TC modes. It also displays user bits, edit IN/OUT points, edit duration, menu settings, and warning codes.

Resetting the counter

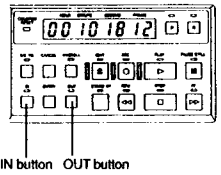
In the CTL mode, you can press the COUNTER RESET button to reset the time counter to zero.

NOTES:
- Stored edit points will be cleared if the COUNTER RESET button is pressed.
- The counter cannot be reset during preroll and automatic editing.



Edit point display

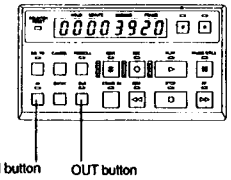
- To display the IN point, press IN.
- To display the OUT point, press OUT.
- The edit point is displayed only while the IN or OUT button is being pressed.



Edit duration display

- Press IN and OUT simultaneously. The counter shows edit duration in hours, minutes, seconds, and frames.

NOTE:
- For details on menu setting and warning code displays, ☞ p. 37 and p. 47.



SETUP MENU

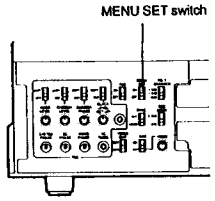
OPERATION

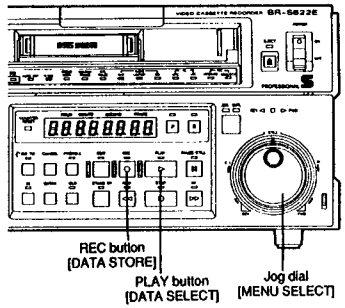
By engaging the Menu Set mode, you can cancel any preset functions that you don't require or change certain parameters as desired.

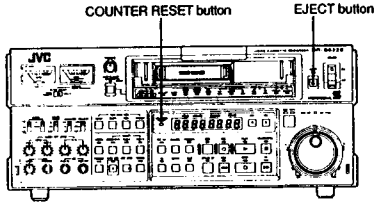
1. Set the MENU SET switch to ON.
   - The set-up menu appears on the monitor screen. The counter display will also switch to the Menu Set mode.
   - The Menu number (000) for the first item will blink.
2. Turn the Jog dial to locate the item you want to set.
   - Turning the dial clockwise increments the setting items (000→001→100, etc.); turning it counterclockwise, decrements the setting items.
3. When you locate an item you wish to change, press PLAY.
4. Press PLAY again to change the setting.
5. To continue setting, repeat steps 2 to 4.
6. Press REC to store the new settings.
7. To exit the menu, set the MENU SET switch to OFF.

NOTE:

- All menu items can be automatically restored to their initial settings. To do this, first switch off the VCR's power. Then, while pressing COUNTER RESET and EJECT simultaneously, switch on the power. All menu items will have been restored to their initial settings.
- Some of the menu items cannot be set during the VCR is in the Record mode. We recommend that menu setting be done in the Stop mode.

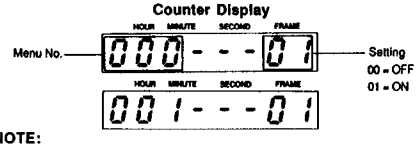




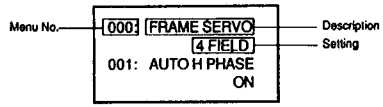


MENU SETTINGS

Counter Display



On-Screen Display



Blinking: Item ready to be set

NOTE:
For items with more setting variations, 02, 03 ... are displayed. In such cases, 00/01 does not mean OFF/ON.

(Initial settings are in brackets.)

Menu No.		On-Screen Description	Settings		Explanation
			Counter	On-Screen	
SERVO	000	FRAME SERVO	00	OFF	OFF: To defeat Frame Servo. When random-interlaced or low-S/N video signals are used, set to OFF.
			[01]	[4 FIELD]	4 FIELD: To use Colour Frame Servo when editing in colour frame servo mode.
			02	2 FIELD	2 FIELD: To use Frame Servo.
	001	AUTO H PHASE	00	OFF	OFF: To defeat Auto H-Phase Lock. Set to OFF for animation or CG recording.
			[01]	[ON]	ON: To use Auto H-Phase Lock. Normally set to ON.
VIDEO	100	SWITCHING POINT *1	[00]	[REC6.5H, PB4.5H]	Selects head switching point. REC6.5H, PB4.5H: To position head switching point 6.5H ahead of V sync in recording, and to shift it 2H in playback (1H lower than normal). Normally use this setting.
			01	REC6.5H, PB5.5H	REC6.5H, PB5.5H: To position head switching point 6.5H ahead of V sync in recording, and to shift it 1H in playback.
			02	REC2.25H, PB1.25H	REC2.25H, PB1.25H: To position head switching point 2.25H ahead of V sync in recording, and to shift it 1H in playback. Use this setting when you want a lower switching point for closed-circuit systems.
	101	S-VHS REC. EQ.			Selects video frequency response according to the characteristics of the tape used.
			00	TAPE TYPE-1	TAPE TYPE-1: Do not use this setting.
			[01]	[TAPE TYPE-2]	TAPE TYPE-2: Professional-S tape or other double-coated tapes.
			02	TAPE TYPE-3	TAPE TYPE-3: S-VHS master tape.
			03	TAPE TYPE-4	TAPE TYPE-4: Do not use this setting.
	102	U-VCR Y/C MODE			Selects the mode of the signal output via rear panel OPTION (Y-686/924) connector. (Effective with SA-E92E board)
			[00]	[CONV.]	CONV.: To output Y-686/924 dubbing signal to conventional 3/4" U-VCR machines.
			01	HB/SP	HB/SP: To output Y-686/924 dubbing signal to 3/4" U-VCR SP or Hi-Band machines.
	103	WIDE ASPECT ID REC.			Selects recording in wide aspect format (16:9 aspect ratio) or normal format (4:3 aspect ratio).
			[00]	[AUTO]	AUTO: Automatically detects wide aspect ID of input signal (Y/C input only) and records in wide aspect format.
			01	WIDE	WIDE: Records in wide aspect format regardless of the format of input signal. When recording wide-aspect pictures via composite input, use this setting.
			02	NORM.	NORM.: Records in normal aspect format regardless of the format of input signal.

Menu No.		On-Screen Description	Settings		Explanation
			Counter	On-Screen	
VIDEO	104	COMPONENT OUT LEVEL	[00] 01	[LOW] HIGH	Selects the level of component signals output via rear panel Y/R-Y/B-Y connectors. (Effective with SA-T22E) LOW: To output component signals to MII machines. HIGH: To output component signals to Betacam machines.
AUDIO	200	Hi-Fi AUDIO REC.	00 [01]	OFF [ON]	OFF: To defeat Hi-Fi audio recording. ON: To record Hi-Fi audio.
	201	NORM. AUDIO DOLBY NR	00 [01]	OFF [ON]	OFF: To defeat Dolby NR circuit for normal audio. ON: To activate Dolby NR circuit for normal audio.
	202	AUDIO LIMITER	00 [01]	OFF [ON]	OFF: To defeat audio limiter for normal audio tracks. ON: To activate audio limiter for normal audio tracks to avoid over-level recording. (Audio recording level adjustment is possible with limiter ON.)
	203	AUDIO OUT	[00] 01 02	[SEP.] Hi-Fi NORM	Selects output signals via rear panel AUDIO OUT connectors. SEP.: To output as labelled: normal audio from NORMAL AUD-1/AUD-2, Hi-Fi audio from Hi-Fi L/R. Hi-Fi: To output Hi-Fi audio from all connectors: NORMAL AUD-1 outputs Hi-Fi left-channel signal and NORMAL AUD-2 outputs Hi-Fi right-channel signal. NORM: To output normal audio from all connectors: Hi-Fi L outputs normal audio-1 signal and Hi-Fi R outputs normal audio-2 signal.
	204	Hi-Fi OUT AT SEARCH	[00] 01	[MUTE] NORM	Selects output signals via rear panel Hi-Fi AUDIO OUT connectors during search. MUTE: To output muted Hi-Fi audio. NORM.: To output normal audio.
	205	AUD-1 REC.	[00] 01	[AUD-1] AUD-1/2 MIX	Selects audio signals to be recorded on the normal audio-1 track. AUD-1: Audio signals input to AUD-1 are recorded. AUD-1/2 MIX: Mixed audio signals input to AUD-1 and AUD-2 are recorded. (Levels are controlled independently with the corresponding control.) Nothing is recorded on the normal audio-2 track unless menu item #206 is set to "01 – LTC".
	206	AUD-2/LTC *2	[00] 01	[AUD-2] LTC	Selects signals to be recorded on the normal audio-2 track. AUD-2: Audio signals input to AUD-2 are recorded. LTC: LTC signal is recorded.
SYSTEM	300	DIRECT EJECT	00 [01]	DISABLE [ENABLE]	DISABLE: EJECT command is accepted only from Stop mode. ENABLE: EJECT command is accepted from any mode.
	301	DIRECT SEARCH	00 [01]	DISABLE [ENABLE]	DISABLE: Jog/Shuttle dials do not function unless JOG/SHTL button is pressed first. ENABLE: Jog/Shuttle dials function directly from Stop, Play, Still, FF and REW modes.
	302	AUTO REC. PREROLL	00 [01]	DISABLE [ENABLE]	DISABLE: Enters Record-Pause mode without preroll. Picture will be distorted at record-start point. ENABLE: Enters Record-Pause mode with preroll of about 3 seconds.
	303	WARNING INHIBIT	[00] 01	[OFF] ON	OFF: Malfunctions are detected for warning indications. Normally keep set to this position. ON: Detection of malfunctions is inhibited. No warning indication is available.
	304	RECORDING INHIBIT	[00] 01	[OFF] ON	OFF: Recording is possible with cassettes with safety tab in place. ON: Recording is inhibited regardless of the presence of safety tab. Use this position if the VCR is used only as a player.
	305	REPEAT REC.	[00] 01	[DISABLE] ENABLE	This setting is for manufacturer adjustment purposes only. Always keep set to DISABLE.

Menu No.		On-Screen Description	Settings		Explanation
			Counter	On-Screen	
SYSTEM	306	LONG PAUSE	00 [01]	DISABLE [ENABLE]	DISABLE: To defeat Long Pause function. ENABLE: To use Long Pause function in Standby-On, Still and Record-Pause modes. (Long Pause parameters are selected with menu items #307, #308 and #309.)
	307	LONG PAUSE TIME	00 01 02 03 04 05 06 [07]	1 SEC 10 SEC 30 SEC 1 MIN 2 MIN 3 MIN 4 MIN [5 MIN]	With menu item #306 set to ENABLE, selects the length of time before normal Pause (Standby-On, Still and Record-Pause) mode changes to Long Pause.
	308	LONG PAUSE (STILL)	00 01 [02]	STANDBY-OFF T. RELEASE [STEP FWD]	Selects the contents of Long Pause mode. (After the time set with menu item #307 expires in Still or Record-Pause mode, the VCR operates as specified.) STANDBY-OFF: Enters Standby-Off mode. T. RELEASE: Tension arm is released for tape protection. Still pictures continue to be available. STEP FWD: Tape advances in slow-motion for about 2 seconds (about 2 frames). This action is repeated 5 times at the time intervals set with menu item #307. The VCR enters the Standby-Off mode after the final interval.
	309	LONG PAUSE (STOP)	[00] 01 02	[STANDBY-OFF] T. RELEASE STEP FWD	Selects the contents of Long Pause mode. (After the time set with menu item #307 expires in the Standby-On mode, the VCR operates as specified.) STANDBY-OFF: Enters Standby-Off mode. T. RELEASE: Tension arm is released for tape protection. STEP FWD: Tape advances in slow-motion for about 2 seconds (about 2 frames). This action is repeated 5 times at the time intervals set with menu item #307. The VCR enters the Standby-Off mode after the final interval.
	310	STANDBY-OFF MODE	00 [01] 02	DRUM ON [DRUM OFF] UNLOAD	Selects the status of Standby-Off mode. DRUM ON: Head drum continues to rotate with tape loaded. DRUM OFF: Head drum stops rotating with tape loaded. UNLOAD: Head drum stops rotating and tape unloads.
	311	MODE AT TAPE BEGIN	[00] 01	[SHORT-FF] PLAY	Selects the mode entered when the beginning of the tape is detected. SHORT-FF: Fast-forwards the leader section and enters Standby-On mode. PLAY: Enters Play mode.
	312	MODE AT TAPE END	[00] 01	[SHORT-REW] REW	Selects the mode entered when the end of the tape is detected. SHORT-REW: Rewinds the leader section and enters Standby-On mode. REW: Rewinds to the beginning of tape and enters Standby-On or Play mode depending on the setting of menu item #311.
	313	PB•PB/EE	00 [01]	PB/EE [PB]	Selects output signal in the mode specified with menu item #314. PB/EE: Outputs EE signal. PB: Outputs playback signal.
	314	PB/EE MODE	[00] 01	[STOP /FF/REW] STOP	Selects the mode in which EE signal is output. STOP /FF/REW: EE signal is output in Stop, FF and REW modes. STOP : EE signal is not output in FF and REW modes.
	315	LOCAL FUNCTION	[00] 01 02 03	[STOP ,EJECT] STP,EJ,PLY,FF, RW,STL ALL ENABLE ALL DISABLE	Selects functions that can be locally operated when front panel REMOTE switch is set to 9PIN or REM-2.

Menu No.		On-Screen Description	Settings		Explanation
			Counter	On-Screen	
SYSTEM	316	9PIN CMD FUNCTION	[00] 01	[ALL DISABLE] STOP ,EJECT	Selects 9-pin remote control commands that are acceptable when front panel REMOTE switch is set to LOCAL. ALL DISABLE: Accepts no command from 9-pin remote control. STOP ,EJECT: Accepts STOP and EJECT commands only. (Note: With some remote controls, no command is accepted.)
	317	9PIN DEVICE TYPE ID	[00] 01 02 03	[JVC SVHS-1] JVC SVHS-2 OTHER TYPE-1 OTHER TYPE-2	Selects device type ID returned from VCR to 9-pin remote control in response to its request. JVC SVHS-1: Use this setting with BR-S622E/BR-S822E. JVC SVHS-2: Use this setting if SA-F911E is included in the system. OTHER TYPE-1/OTHER TYPE-2: Consult a JVC dealer.
	318	TC DATA W/O TC BOARD	[00] 01	[TC MISSING] CTL DATA	Selects VCR's response to 9-pin remote control when remote control requests time code data when TC board is not installed. TC MISSING: VCR returns code meaning TC MISSING. CTL DATA: VCR returns substitute CTL data.
	319	TAPE MAX SPEED	[00] 01 02	[X100] X32 X16	Selects maximum tape speed (full-size cassette only). (FF and REW speeds also correspond to this setting. In the 100x mode, the EE signal is output. In the 32x and 16x search modes, the playback signal is output. The CTL signal is output in the 16x search mode using the RM-86U 45-pin remote control.)
	320	PREROLL TIME	00 ⋮ [07] ⋮ 15	0 SEC ⋮ [7 SEC] ⋮ 15 SEC	Selects preroll time in one-second steps from 0 to 15 seconds.
	321	TIME REF. FOR PREROLL	00 [01]	CTL [TC]	Selects time count reference for preroll in TC operation. CTL : Refers to CTL counts. Preroll is possible even when time codes are missing. TC : Refers to time codes.
	322	IN POINT AUTO ENTRY	00 [01]	NOT ENTERED [ENTERED]	Activates or defeats automatic IN point entry function. NOT ENTERED: IN point is not entered automatically by pressing PREROLL button. ENTERED: IN point is entered automatically by pressing PREROLL button if no IN point has been previously entered.
	323	MODE AFTER PREROLL	[00] 01	[STOP] STILL	STOP : Enters Stop mode after preroll is completed. STILL : Enters Still mode after preroll is completed.
	324	EDIT FIELD	[00] 01	[1st] 2nd	1st: Starts recording/editing on the first field and ends on the second field. 2nd: Starts recording/editing on the second field and ends on the first field. Use this setting when inserting two pictures in one frame for animation.
	325	CTL COUNTER MODE	[00] 01	[±9H] 24H	±9H: Counter shows from −9 to +9 hours in CTL mode. 24H: Counter shows from 0 to 24 hours in CTL mode.
	326	CTL COUNTER MEMORY	[00] 01	[OFF] ON	OFF: No counter memory function is available. ON: Enters Stop mode at CTL counter reading of zero in FF and REW modes.
	327	CTL CLEAR AT EJECT	00 [01]	DISABLE [ENABLE]	DISABLE: CTL counter is not reset when cassette is ejected. ENABLE: CTL counter is reset when cassette is ejected.
	328	EDIT POINT CLEAR	00 [01]	DISABLE [ENABLE]	DISABLE: IN and OUT points are not automatically cleared. ENABLE: IN and OUT points are automatically cleared after execution of an edit with AUTO EDIT button.

Menu No.		On-Screen Description	Settings		Explanation
			Counter	On-Screen	
SYSTEM	329	OUT POINT RETURN	00 [01]	DISABLE [ENABLE]	Activates or defeats OUT Point Return function. (After execution of an edit with AUTO EDIT button, tape automatically returns to the OUT point.)
	330	VIDEO EDIT DELAY	[00] 01	[8 FRAMES] 3 FRAMES	Selects the length of time before video recording starts after reception of EDIT command.
	331	AUDIO EDIT DELAY	[00] 01	[8 FRAMES] 3 FRAMES	8 FRAMES: To delay audio signals by 8 frames in editing for accurate synchronisation with video frames. Normally use this setting. 3 FRAMES: To delay audio signals by 3 frames. Use this setting only when the VCR is controlled via RM-86U remote control units.
	332	CASSETTE SEL. INHIBIT	[00] 01	[OFF] ON	OFF: Cassette size selection is possible with the CASSETTE SELECT button on the front panel. ON: Cassette size selection is inhibited.
	333	CF SERVO LOCK REPLY	00 [01]	DISABLE [ENABLE]	Selects information to deliver to 9-pin remote. DISABLE: Colour frame servo lock cannot be engaged. ENABLE: Colour frame is locked to 4-field colour framing mode.
	334	CF RE-LOCK AT PLAY	[00] 01	[DISABLE] ENABLE	Activates or defeats colour frame re-lock function when colour frame lock is disengaged in Play mode.
	350	SWAP VTR	[00] 01 02 03 04 05 06 07 08 09	[AUTO] PR-900 AUTO SA-F911 BR-S822 KR-M440 KR-M820 KR-M840 KR-M860 OTHER SVHS	Selects player type for swap editing. Normally use AUTO position.
	351	SYNCHRONIZE	00 [01]	DISABLE [ENABLE]	Activates or defeats Capstan Bump function in swap editing.
	352	SYNCHRONIZED VTR	[00] 01	[RECORDER] PLAYER	RECORDER: Applies capstan bump to recorder in swap editing with menu item #351 set to ENABLE. PLAYER: Applies capstan bump to player.
	353	SYNC GRADE	[00] 01 02 03	[ACCURATE] ±1 FRAME ±2 FRAME ROUGH	Selects editing accuracy after capstan bump. ACCURATE: In-phase editing at 0 frame accuracy. ±1 FRAME: In-phase editing at ± 1 frame accuracy. ±2 FRAME: In-phase editing at ± 2 frame accuracy. ROUGH: Editing starts when in-phase status is reached.
	354	SYNC GRADE AT RE-TRY	[00] 01	[NO CHANGE] DOWN	NO CHANGE: Applies same editing accuracy as set with menu item #353 when edit is re-tried. DOWN: Lowers editing accuracy of re-tries.
	355	AUTO-EE	[00] 01	[RECORDER ONLY] AUTO-EE	RECORDER ONLY: EE output is not available when "P" is pressed in swap editing. AUTO-EE: Recorder automatically switches to EE mode when "P" is pressed in swap editing. Convenient in one-monitor editing.
	356	MODE AT CF UNLOCK	00 01 [02]	EDIT STOP [RE-TRY]	Selects the VCR mode in cases where colour frame is unlocked when automatic editing or edit preview is started. EDIT: Executes editing or edit preview. STOP: Enters Stop mode. RE-TRY: Re-tries up to 3 times.

Menu No.		On-Screen Description	Settings		Explanation
			Counter	On-Screen	
TIME CODE	400	VITC POSITION-1	00 ⋮ [12] ⋮ 15	7LINE ⋮ [19LINE] ⋮ 22LINE	Selects the horizontal scanning line on which VITC data is stored. Selectable from line 7 to line 22 in the vertical blanking interval. • Do not select line 11 in S-VHS recording as this is reserved for AUTO EQ. • When using the SA-T22E TBC board, set above line 9.
	401	VITC POSITION-2	00 ⋮ [14] ⋮ 15	7LINE ⋮ [21LINE] ⋮ 22LINE	Selects the horizontal scanning line on which VITC data is stored. Selectable from line 7 to line 22 in the vertical blanking interval. (Two lines per field are used to store VITC data.) • Do not select line 11 in S-VHS recording as this is reserved for AUTO EQ signal. • When using the SA-T22E TBC board, set above line 9.
	403	TCG REGEN MODE	[00] 01 02	[TC & UB] TC UB	Selects code data to be regenerated in Internal Regen mode (with TC board's INT/EXT switch set to INT and PRESET /REGEN switch set to REGEN.) TC & UB: Records both time code and user bit data in Regen mode. TC: Records time code data in Regen mode and user bit data in Preset mode. UB: Records user bit data in Regen mode and time code data in Preset mode.
	404	TC SOURCE AT REGEN	[00] 01	[LTC] VITC	Selects the type of reference time code in the Regen mode. LTC: Reference code is LTC. VITC: Reference code is VITC.
	405	LTC OUT (REGEN)	[00] 01	[OFF TAPE] TCG	Selects output signal from TIME CODE OUT connector while playback is in progress in Internal Regen mode. OFF TAPE: Outputs time code signal picked up from tape. TCG: Outputs time code signal regenerated by TC generator.
	406	U-BIT BINARY GROUP	[00] 01 02 03	[NOT SPECIFIED] ISO CHAR. UNASSIGNED-1 UNASSIGNED-2	Selects character set configuration to use TC generator's user bits. NOT SPECIFIED: Character set configuration is not specified. ISO CHAR.: 8-Bit character set conforming to ISO 646 and ISO 2022 (with binary group flags at bit counts 43 and 59 in LTC; at 55 and 75 in VITC.) UNASSIGNED-1: Undefined. UNASSIGNED-2: Undefined.
	407	PHASE CORRECTION BIT	00 [01]	OFF [ON]	Selects recording of LTC phase correction bit (parity bit for bit error check). OFF: Not recorded. (Use this setting if 10s readout is not correct with external TC reader connected.) ON: Recorded.
	408	VITC LINE	[00] 01	[VITC MIX] CLEAN ONLY	Selects whether lines set with menu items #400 and #401 are to be cleaned in recording. VITC MIX: VITC is recorded after lines are cleaned. CLEAN ONLY: Lines are cleaned.
	409	EXT REGEN TC	[00] 01	[LTC] VITC	Selects the type of externally input reference time code in External Regen mode. LTC: To use LTC via TIME CODE IN connector. VITC: To use VITC via VIDEO IN connector.
	410	AUTO REGEN MODE	[00] 01 02 03	[ASM+INS] ASM INS OFF	Selects the edit mode in which time codes are recorded automatically in Regen mode regardless of PRESET/ REGEN switch setting in automatic editing. ASM+INS: Records in Regen mode in both Assemble and Insert modes. ASM: Records in Regen mode in Assemble mode only. INS: Records in Regen mode in Insert mode only. OFF: Records in the mode specified by PRESET/REGEN switch.

Menu No.		On-Screen Description	Settings		Explanation
			Counter	On-Screen	
ON-SCREEN	500	ON-SCREEN DISPLAY	00 [01]	OFF [ON]	OFF: No data is displayed on-screen. ON: Data is displayed on-screen.
	501	CHAR. H-POSITION	[00] ⋮ 08	[00] ⋮ 8	Adjusts on-screen VCR data display position in the horizontal direction. (Not effective when menu item #504 is set to 02.) 0 : VCR data is displayed at the rightmost position. 1 - 8: Display position shifts to the left with increasing numbers.
	502	CHAR. V-POSITION	[00] ⋮ 09	[00] ⋮ 9	Adjusts on-screen VCR data display position in the vertical direction. (Not effective when menu item #504 is set to 02.) 0 : VCR data is displayed at the bottom of screen. 1 - 9: Display position shifts up with increasing numbers.
	503	CHAR. BACKGROUND	[00] 01 02	[BORDER] SEMI. BLACK	BORDER: Displays bordered characters. SEMI.: Displays semi-transparent characters. BLACK: Displays characters on black background.
	504	INFORMATION	00 [01] 02	TIME [TIME & MODE] EDIT DATA	Selects available on-screen information. TIME: Time counter data. TIME & MODE: Time counter data, operation mode and Jog/Shuttle tape speed. EDIT DATA: Edit data in swap editing.
TBC	600	TBC FREEZE	[00] 01	[DISABLE] ENABLE	Selects the mode of still pictures in TBC operation. DISABLE: Outputs normal still pictures. ENABLE: Outputs 'freeze' still pictures from TBC's field memory when PAUSE/STILL button is pressed while in Play mode.
	601	V BLANK MASK	[00] 01	[OFF] ON	Activates or defeats vertical blanking interval masking function in TBC operation. OFF: No masking function. ON: Masks the entire vertical blanking interval in playback to erase VITC. VITC readout is impossible with this setting.

*1: When you set this item to "02 – REC 2.25H/PB 1.25H" in recording, be sure to set it to this position when playing back the tape in the TBC mode.
*2: When playing back a tape with no LTC recorded on the normal audio-2 track, set this item to "00 – AUD-2".

ROM VERSION/HOUR METER DISPLAY

By engaging the Menu Set mode, you can also check the numbers of device ROMs and the hour meter.

1. Set the MENU SET switch to ON.
   - The set-up menu appears on the monitor screen. The counter display will also switch to the Menu Set mode.
   - The Menu number (000) for the first item will blink.
2. Turn the Jog dial to locate items with numbers in the order of 900.
   - For quicker location, turn the Jog dial counterclockwise.

Menu No.	On-Screen Description	Explanation
900	SYSCON ROM Ver.	Indicates version number of SYSCON ROM.
901	MECHACON ROM Ver.	Indicates version number of MECHACON ROM.
902	OPERATION ROM Ver.	Indicates version number of OPERATION ROM.
903	SLOT ROM Ver.	Indicates version number of SLOT ROM. This item also shows the type of remote control installed in the slot. Available indications are: JVC45PIN (20 on 5th and 6th digits on counter display) RS-232C (21 on 5th and 6th digits on counter display) NO CONNECT (00 on 5th and 6th digits on counter display)
---	AVM/OS ROM Ver.	Indicates version number of AV microcomputer/on-screen ROM.
908	POWER HOUR METER	Indicates the total time (up to 4 digits in hours) the VCR has been powered.
909	DRUM HOUR METER	Indicates the total working time of the drum motor in hours.
910	CAP HOUR METER	Indicates the total working time of the capstan motor in hours.
911	REEL HOUR METER	Indicates the total working time of the reel motors in hours.

CAUTION
Do not set the following three settings together:
Menu item #303 WARNING INHIBIT — 01 ON, #305 REPEAT REC. — 01 ENABLE and #306 LONG PAUSE — 00 DISABLE.
We are not responsible for any malfunctions caused by this combination of settings.

WARNING DISPLAY

DIAGNOSTIC CODES

The WARNING display uses numerical codes to indicate various malfunctions and warnings on the counter display. Worded warning messages are provided on-screen. In some cases, power must be turned off before the machine can be recovered. When the AUTO OFF indicator lights, power must be turned on and off again before the machine can be recovered.

	AUTO OFF Indicator	Display code	WARNING (On-Screen Display)	Symptom/Operation
Sensors	YES	01	WARNING 01 LAMP FAILURE	Tape-end sensor LED burns out. The cassette will be ejected. All controls become inoperative.
	YES	02	WARNING 02 CONDENSATION ON DRUM	Moisture condensation on drum and in transport. The cassette is ejected. After ejection, the drum starts rotating and cassettes cannot be loaded until condensation has been eliminated. Do not turn the power off until the AUTO OFF indicator goes out.
	YES	08	WARNING 08 SUP TENSION FAILURE	Slack tape on the supply reel. All controls become inoperative.
Loading Mechanism		32	WARNING 32 FAILURE LOADING	Tape cannot load correctsy. Tape unloads and the cassette is ejected. The display turns off when a cassette is inserted again. Normal operation is restored.
	YES	33	WARNING 33 FAILURE UNLOADING	Tape cannot unload. All controls become inoperative.
Cassette Carriage	YES	41	WARNING 41 CASSETTE EJECT FAILURE	Cassette carriage does not lift during tape ejection (even after 3 seconds have passed). All controls become inoperative.
Leader Tape Detection		56*	WARNING 56 TAPE DEFECTIVE	Tape beginning and end sensors turn ON during loading because the tape is broken. The cassette is ejected. If the cassette fails to load properly, it may get stuck in the cassette slot. In this case, remove it by hand.The display turns off when an undamaged cassette is inserted. Normal operation is restored.
		57	WARNING 57 END LEADER DETECTION	Tape-end sensor turns ON during loading. Rewind mode is engaged. If the leader tape is detected within 3 seconds, the cassette is ejected. The display turns off when a cassette is inserted again. Normal operation is restored.
		58	WARNING 58 BEGIN LEADER DETECTION	Tape-beginning sensor turns ON during loading. FF mode is engaged. If the leader tape is detected within 3 seconds, the cassette is ejected. The display turns off when a cassette is inserted again. Normal operation is restored.

	AUTO OFF Indicator	Display code	WARNING (On-Screen Display)	Symptom/Operation
Rotating System	YES	70	WARNING 70 DRUM MOTOR FAILURE	Drum motor stops. All controls become inoperative. Recovers when a cassette is inserted again.
	YES	71	WARNING 71 CAP MOTOR FAILURE	Capstan motor stops. All controls become inoperative. Recovers when a cassette is inserted again.
	YES	72	WARNING 72 SUP REEL MOTOR FAILURE	Supply reel rotates abnormally. All controls become inoperative. Recovers when a cassette is inserted again.
	YES	73*	WARNING 73 TU REEL MOTOR FAILURE	Take-up reel rotates abnormally. All controls become inoperative. Recovers when a cassette is inserted again.
Others	YES	04	WARNING 04 REEL SERVO FAILURE	Power supply to reel tension servo stops. All controls become inoperative.
		IE	INVALID OPERATION	Invalid command has been given. (eg. S-VHS recording on a VHS cassette, Record or Edit command with VCR set to RECORDING INHIBIT, etc.)

* Cassette Insertion is not possible if the cassette slot remains open after cassette ejection. In this case, press the EJECT button to close the slot door, and insert the cassette again.

TEST POINTS

The output signals from the Hi-Fi audio heads and video heads are available at the front panel test points. Connect an oscilloscope to these test points to check the VCR's performance and condition.

Connection	Items to be checked	Standard waveform
Hi-Fi audio head output V-RF, A-RF, D-PULSE, GND To input terminal of oscilloscope To external trigger terminal of oscilloscope To ground terminal of oscilloscope	• Tape-to-head contact • Tape running stability • Inferior RF after head replacement • RF recording level	• "+" triggered CH-1 CH-2
Video head output V-RF, A-RF, D-PULSE, GND To input terminal of oscilloscope To external trigger terminal of oscilloscope To ground terminal of oscilloscope	• Compatibility of tape pattern • Tape-to-head contact • Tape running stability • Tracking • Video signal recording level • Abnormality in RF Use a 10:1 probe	• "+" triggered CH-2 CH-1

AUTOMATIC EQUALISER

To prevent deterioration of the luminance signal frequency caused by worn heads, or when using tapes with different signal characteristics or that have been over-played, the BR-S822E incorporates an automatic equaliser (AUTO EQ) circuit which functions in the S-VHS mode. The reference signal to operate this circuit is added to one H line of the vertical blanking time. Prior to shipment, the BR-S822E is preset to add the reference signal to line 11. If VITC (Vertical Interval Time Code) or VITS (Vertical Interval Test Signal) is inserted in this line, these signals will be erased. If you do not want these signals erased, consult a JVC service agent.

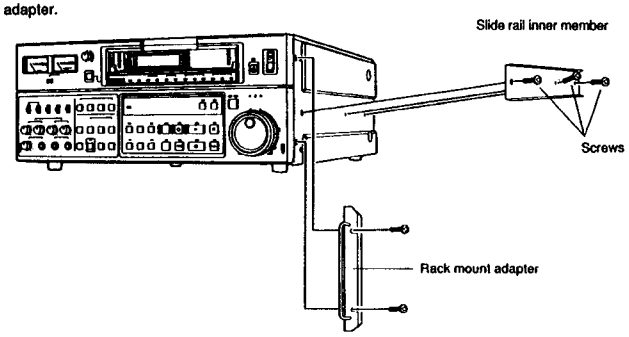
NOTE:
The AUTO EQ circuit does not function if the reference signal reading position differs from the position of the reference signal added in recording. It will also malfunction if VITC or VITS is recorded at the reference signal reading position.

INSTALLATION

RACK MOUNTING

Using the optional SA-K63UB Rack Mount Adapter, you can install the BR-S822E in a 19" EIA-standard rack.
- Use a complete slide and bracket unit such as the Accuride slide and bracket unit (Part No. C-2038-22/BK-2038).
- For more details, consult your local JVC service agent.

1. Attach the inner members of the slide rails with screws as illustrated. (Screws should be no more than 8 mm long.)
2. Attach the SA-K63UB rack mount adapter.



3. Attach the right and left brackets and outer members of the slide rails to the rack.
   - When installing the bracket at the back of the rack's panel surface.

   - When installing the bracket at the front of the rack's panel surface.

   * Adjust the distance between the front panel and the slide rail to between 50 and 55 mm.
4. Check that the unit slides in and out smoothly.

NOTE:
- The rack mount adapter handle is only for sliding the unit. Do not carry the unit holding the handle.
- Leave enough space at the back of the unit (at least 10 cm) for ventilation and connections.

SPECIFICATIONS

GENERAL

Format	:	VHS/S-VHS Europe standard
Power consumption	:	90 W
Power requirment	:	AC 110 – 127 V/220 – 240 V~, 50/60 Hz
Dimensions	:	42.9 (W) X 18.8 (H) X 56.5 (D) cm
Weight	:	23 kg
Operating temperature	:	5°C to 40°C
Storage temperature	:	–20°C to 60°C
Tape speed	:	23.39 mm/sec
Recording & Playback time	:	Max. 180 min. with JVC SE-180/E-180
Fast forward/ Rewind time	:	Less than 2.5 min. for 180 min. tape

VIDEO

Recording and playback	:	Rotary two-head helical scanning system
Luminance	:	FM recording
Colour signal	:	Phase shift, converted sub-carrier direct recording
Video signal system	:	PAL-type colour signal/PAL-type Y/C signal
Input		
Line	:	1.0 Vp-p, 75 ohms, unbalanced
Y/C 443	:	Y: 1.0 Vp-p, 75 ohms, unbalanced C: 0.3 Vp-p, 75 ohms, unbalanced (Burst)
Output		
Line	:	1.0 Vp-p, 75 ohms, unbalanced
Y/C 443	:	Y: 1.0 Vp-p, 75 ohms, unbalanced C: 0.3 Vp-p, 75 ohms, unbalanced (Burst)
Signal-to-noise ratio	:	More than 46 dB (S-VHS) More than 45 dB (VHS)
Horizontal resolution	:	More than 400 lines (S-VHS) More than 250 lines (VHS)
Reference video input	:	0.3 to 1.0 Vp-p, 75 ohms, unbalanced (with loop-through, with the SA-T22E)
External sync input	:	0.3 to 4.0 Vp-p, 75 ohms, unbalanced (with one loop-through, without the SA-T22E)

AUDIO

Input		
Line	:	–6/0/+4 dBs, 10 k-ohms/600 ohms, balanced (Hi-Fi/Normal)
Mic	:	–67 dBs, 10 k-ohms, unbalanced
Output		
Line	:	–6/0/+4 dBs, Low impedance, balanced (Hi-Fi/Normal)
Monitor	:	–6 dBs, Low impedance, unbalanced
Phones	:	∞ to –17 dBs, 8 ohms
Signal-to-noise ratio	:	More than 43 dB (NR-off, Normal at 3% distortion)
Dynamic range	:	More than 87 dB (Hi-Fi)
Frequency response	:	20 to 20,000 Hz (Hi-Fi) 40 to 12,000 Hz (Normal)
Wow & flutter	:	Less than 0.005% WRMS (Hi-Fi) Less than 0.3% RMS (Normal)

TIME CODE

Input	:	0 dB ± 6 dBs, 10 k-ohms, unbalanced
Output	:	0 dB ± 3 dBs, Low impedance, unbalanced

CONNECTORS

Video		
Line input	:	BNC-type connector
Line output	:	BNC-type connectors
Y/C 443 input/output	:	7-pin connectors
Monitor	:	BNC-type connector
Audio		
Hi-Fi input/ output	:	XLR connectors
Normal input/ output	:	XLR connectors
Monitor	:	RCA connector
Remote control	:	9-pin connector

ACCESSORIES

Provided accessories : 7-pin cable

Design and specifications subject to change without notice.

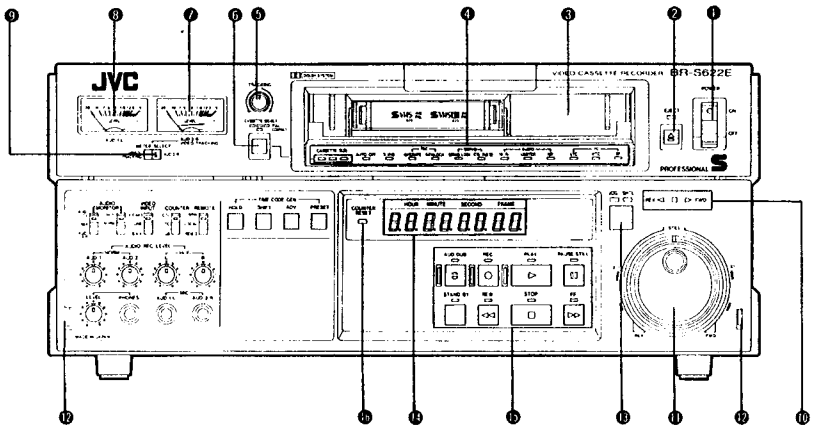
VIDEO CASSETTE RECORDER
VIDEOKASSETTENREKORDER
MAGNETOSCOPE A CASSETTE

S-VHS 625 VHS PAL Hi-Fi

PGD30002-284

CONTROLS AND CONNECTORS



❶ POWER switch
- When power is ON, the time counter and level meters will be illuminated.

❷ EJECT button with LED indicator
- Ejects the cassette (from any mode).
- The indicator lights while the cassette is being ejected.

❸ Cassette loading slot
- Accepts either a compact or full-size S-VHS/VHS cassette according to the type selected with the CASSETTE SELECT button ❻.

❹ LED indicators

CASSETTE SIZE indicators
- Indicate whether the recorder is in the Full or Compact mode. When all three indicators are blinking, the recorder is ready to accept a full-size cassette. When only the centre indicator is blinking, the recorder is ready to accept a compact cassette. Press the CASSETTE SELECT button ❻ to change modes. When a cassette is inserted, the blinking will stop and the corresponding indicator(s) will remain continuously lit.

AUTO OFF indicator
- Lights when the unit malfunctions. All other controls are disabled.

S-VHS indicator
- Lights when an S-VHS or S-VHS-C cassette is inserted with the unit in the S-VHS mode, or when playing back a blank part of the tape.
- Blinks when S-VHS recording is attempted with a VHS cassette.

TBC indicators
(with optional SA-T22E TBC installed)

OPERATE: Lights when the TBC is in operation. A timebase-corrected signal is output.

GENLOCK: Lights when the TBC is in operation and locked to the external reference signal.

SERVO indicators

SERVO LOCK: Lights when the capstan and drum servos are locked to the reference signal.

CTL PULSE: Lights during playback of a tape with no control pulse recorded.

COLOUR FRAME: Lights when the capstan and drum servos are locked to PAL 4-field colour frame.

AUDIO indicators

Hi-Fi: Lights when the Hi-Fi REC circuit is ON (via menu setting) or when playing back Hi-Fi-recorded tapes.

LIMITER: Lights when the built-in audio limiter circuit is set to ON (via menu setting).

NR: Lights when the Dolby B* noise reduction circuit is set to ON (via menu setting).

TC (TIME CODE) indicators
(with optional SA-R22E TC [time code] generator/reader installed)

LTC: Lights green when LTC-recorded tapes are played back with the normal audio-2 track set for LTC use (via menu setting). If LTC is not picked up, the indicator lights orange. This indicator may also light green when normal-audio-recorded tapes are played back.

VITC: Lights when VITC-recorded tapes are played back or when recording a VITC signal.

❺ TRACKING control
- Adjusts tracking. Turn in either direction until the tracking meter deflects all the way to the right.
- Normally leave in the centre click-stop position.

❻ CASSETTE SELECT button
- Press to select FULL or COMPACT. The corresponding indicator(s) will light.

❼ AUD-2/R (VIDEO/TRACKING) level meter
- Indicates the audio level of the normal audio-2 or Hi-Fi right-channel signal during recording and playback.
- Functions as a video level meter during recording and as a tracking meter during playback when the METER SELECT switch ❾ is set to VIDEO/TRACKING.

❽ AUD-1/L level meter
- Indicates the audio level of the normal audio-1 or Hi-Fi left-channel signal during recording and playback.

❾ METER SELECT switch
- Switches the AUD-2/R level meter ❼ between audio level and video level indication.

AUD-2/R: Meter functions as the audio-2/Hi-Fi right-channel level meter.

VIDEO/TRACKING: Meter functions as a video level meter in recording, and as a tracking meter in playback.

❿ Tape direction indicators
- Indicate the current tape direction.

▷ : Forward
□ : Still
◁ : Reverse

⓫ JOG/SHUTTLE dials
- Dual concentric controls. The outer functions as a Shuttle ring, the inner as a Jog dial. The Jog and Shuttle modes can be entered directly from the Play, Still, FF, REW, or Stop modes.

SHUTTLE ring: Search speed can be varied continuously from 1/30 to 32 times normal (up to 14 times normal with C-size cassettes) in forward or reverse. Set to the centre click-stop position to engage the Still mode.

JOG dial: Manual frame-by-frame search in either direction. Tape speed is determined by the speed of dial rotation. Releasing the dial engages the Still mode. Also used in edit point trimming, menu setting and TC/UB presetting.

⓬ Control panel lock release buttons
- To tilt the control panel, press these buttons and lift the panel at the same time. The panel can be tilted to 90° and locked at angles of 25°, 50°, and 75°.

⓭ JOG/SHUTTLE button with JOG/SHTL mode indicators
- Instantly re-activates the Shuttle mode with search speed determined by the current dial setting.

⓮ Time counter
- Shows tape time in hours, minutes, seconds, and frames.
- Displays edit-in and -out points.
- Displays user bits.
- Displays menu settings and warnings.

⓯ Operation buttons with LED indicators

PAUSE/STILL button
- Temporarily stops recording when pressed in the Record mode.
- Displays a still picture when pressed in the Play mode.

PLAY button
- Starts playback.
- Re-starts normal playback when pressed in the Still or Search mode.
- Starts recording when pressed together with the REC button.
- Starts audio dubbing when pressed together with the AUD DUB button in the Still mode.
- Re-starts recording when pressed in the Record-Pause mode.

REC button
- Starts recording when pressed together with the PLAY button.
- Outputs EE signals when pressed in the Play mode.
- Displays TC generator data when pressed in the Stop mode with REMOTE select switch ⓰ set to LOCAL. (Released by pressing STOP button.)

AUD DUB button
- Starts audio dubbing when pressed together with the PLAY button.

STAND BY button
- Switches the recorder between the Standby-On and Standby-Off modes while the VCR is in the Stop mode. Standby-On is automatically engaged when the Stop button is pressed.

Standby-On: The tape is loaded and the drum is rotating. The indicator is lit.

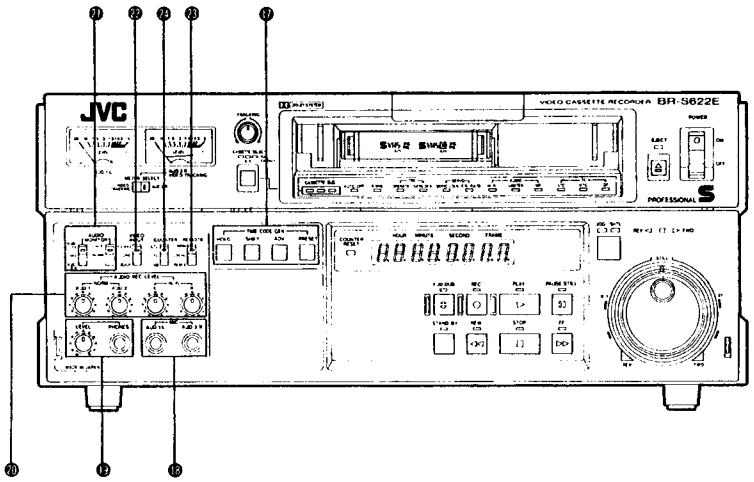
Standby-Off: The tape is loaded but tape tension is reduced and the drum does not rotate. The indicator is not lit.

REW button
- Starts rewind when pressed in any mode.

STOP button
- Engages the Stop mode (Standby-On). The tape stops, but remains in the full-loaded position with the drum rotating.
- The STOP and STAND BY indicators will light.

FF button
- Starts fast forward when pressed in any mode.

⓰ COUNTER RESET button
- Resets the CTL counter to zero.
- The CTL counter will be reset even if this button is pressed in the TC mode.



⑰ Time Code setting buttons

To preset time code/user bit data (with optional SA-R22E TC generator/reader installed).

HOLD button

This button is only effective when the SA-R22E's PRESET/REGEN switch is set to PRESET.

- Holds the current counter data; the leftmost digit will blink.

SHIFT button

- Shifts the blinking digit to the right. (You can also shift the blinking digit in either direction by holding down the SHIFT button and turning the JOG dial.)

ADV (ADVANCE) button

- Advances the value of the blinking digit. (You can also change the value in either direction by holding down the ADV button and turning the JOG dial.)

PRESET button

- Transfers the data set with the HOLD, SHIFT, and ADV buttons to the time code generator.
- Automatically cancels the Hold mode.

⑱ MIC jacks (AUD-1/L, AUD-2/R)

- For microphone connection. Input signal switches from line to microphone.

⑲ PHONES jack/LEVEL control

- Connect a set of headphones to monitor sound recording.
- Adjust output level with the LEVEL control.

⑳ Hi-Fi L/R and NORM AUD-1/AUD-2 AUDIO REC LEVEL controls

- To separately adjust recording levels for the Hi-Fi left/right-channel signals and the normal (linear) audio-1/2 signals.
- Optimum level is the point where the corresponding meter's peak deflection is "0".

㉑ AUDIO MONITOR select switches

- To select the audio output for the PHONES jack and the AUDIO MONITOR OUT connector.
- The Hi-Fi/NORM switch also switches the audio level meters between Hi-Fi and NORMAL.

Hi-Fi: To monitor the Hi-Fi audio signals.
NORM: To monitor the normal audio signals.
AUD-1/L: To monitor the normal audio-1 or Hi-Fi left-channel signal.
MIX: To monitor the AUD-1/L and AUD-2/R signals together.
AUD-2/R: To monitor the normal audio-2 signal or Hi-Fi right-channel signal.

㉒ VIDEO INPUT select switch

- To select an input video signal for recording.

Y/C443: To record the signal input to the Y/C443 connector.
LINE: To record the signal input to the VIDEO IN LINE connector.
BLACK: To record the internally-generated black burst signal on a blank tape in preparation for insert editing. If set to this position during menu setting, on-screen information is output from all output connectors, not only the MONITOR OUT connector.

㉓ REMOTE select switch

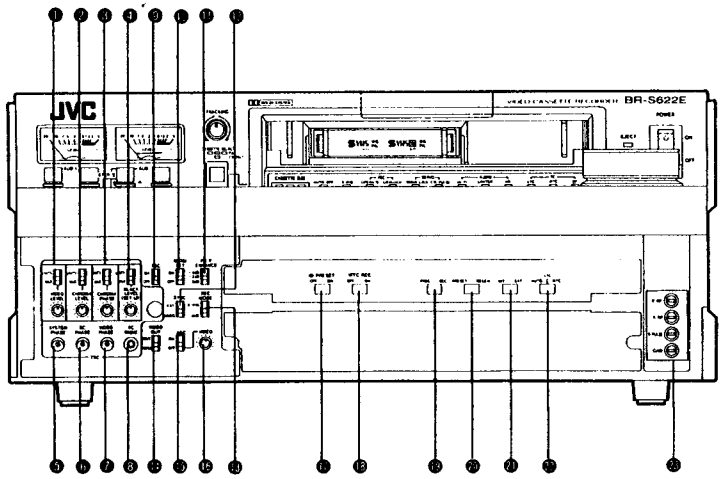
- To select between remote and local control of the recorder.

9-PIN: For remote control via the rear panel 9-pin connector.
LOCAL: For direct control with the recorder's function buttons.
REM-2: For remote control via the optional 45-pin or RS-232C interface.

㉔ COUNTER select switch

- To select the time counter display mode with the SA-R22E TC generator/reader installed. If this is not installed, CTL signals are displayed regardless of the switch setting.

CTL: CTL signals are displayed on the time counter.
TC: Time code signals are displayed on the time counter.
UB: User bits are displayed on the time counter.



TBC CONTROLS

The controls in this section function when the optional SA-T22E TBC (time base corrector) is installed.

❶ VIDEO LEVEL UNITY/VARIABLE select switch/level control

UNITY: The output signal's video level is the same as the playback signal. Normally set to this position.

VARIABLE: Allows you to adjust the output signal's video level with the VIDEO LEVEL control. Adjustment is possible within ±3 dB.

❷ CHROMA LEVEL UNITY/VARIABLE select switch/level control

UNITY: The output signal's chroma level is the same as the playback signal. Normally set to this position.

VARIABLE: Allows you to adjust the output signal's chroma level with the CHROMA LEVEL control. Adjustment is possible within ±3 dB.

❸ CHROMA PHASE UNITY/VARIABLE select switch/level control

UNITY: The output signal's chroma phase is the same as the playback signal.

VARIABLE: Allows you to adjust the output signal's chroma phase with the CHROMA PHASE control. Adjustment is possible within ±30°.

❹ BLACK LEVEL VARIABLE/UNITY select switch/level control

UNITY: The output signal's setup level is the same as the playback signal.

VARIABLE: Allows you to adjust the output signal's setup level with the BLACK LEVEL (SET UP) control. Adjustment is possible within ±107 mV.

❺ SYSTEM PHASE control

- Adjusts the output signal's horizontal phase with respect to that of the reference input signal. Adjustment is possible within a range of ±3 µsec.

❻ SC PHASE

- Adjusts the output signal's subcarrier phase with respect to that of the reference input signal. Up to 15 rotations are possible with continuous variation over a range of ±180°.

❼ VIDEO PHASE control

- Adjusts the output signal's video phase with respect to the playback signal's H sync. Up to 15 rotations are possible with continuous variation over a range of ±1.5 µsec.

❽ YC TIMING control

- Adjusts the output signal's C signal delay time with reference to the Y signal. Adjustable within ±500 nsec.
- Normally set to "8".

❾ TBC ON/OFF switch.

- Set to ON for TBC playback. (During TBC operation, the servo is locked to the reference signal supplied to the EXT REF connector even if the SYNC select switch is set to VIDEO.)
- Set to OFF to bypass TBC.

❿ MENU SET ON/OFF switch

- SET to ON to activate the On-Screen Menu. The counter display will also switch to the Menu Set mode.
- Most basic system setup operations are performed using the Menu.

⓫ PB Y ENHANCE switch

- Enhances the luminance signal for a sharper playback picture.

+4 dB: Boosts luminance signal level by 4 dB at 2.5 MHz for maximum picture sharpness.

+2 dB: Boosts luminance signal level by 2 dB at 2.5 MHz for a sharper picture.

0 dB: No effect. The same result is obtained by setting the VIDEO OUT select switch ⓮ to EDIT.

⓬ SYNC select switch

EXT: The servo is synchronised with the external reference signal supplied to the EXT REF input.

VIDEO: The servo is synchronised with the input video signal.

⓭ REC MODE select switch

S-VHS: To record in the S-VHS mode. (Use S-VHS cassettes only)

VHS: To record in the VHS mode.

⓮ VIDEO OUT select switch

EDIT: Set to this position when using this VCR as a feeder or recorder in dubbing.

NORM: Normally set to this position.

⓯ VIDEO AGC ON/OFF switch

- Set to ON to activate the built-in VIDEO AGC circuit.
- Set to OFF to adjust the luminance video recording level manually.

⓰ VIDEO control

- Use to adjust video recording level, referring to the VIDEO/TRACKING meter. The centre click-stop is the standard position. The VIDEO AGC switch must be OFF to use this control.

TIME CODE GENERATOR/READER SETTING SWITCHES (With SA-R22E TC generator/reader installed)

⓱ ID PRESET ON/OFF switch

ON: To record the ID code specifically preset for each VCR.

OFF: To use the user bits memory for standard procedures in the Preset mode.

⓲ VITC REC ON/OFF switch

ON: To record VITC time codes.

OFF: VITC time codes are not recorded.

NOTE:

This switch has no effect on LTC recording (enabled by setting menu item #206 to "01 – LTC").

⓳ FREE/REC switch

- This switch is effective only when the PRESET/REGEN switch is set to PRESET and the INT/EXT switch is set to INT.

FREE: The time code runs in real time, regardless of the video recorder's operating mode.

REC: The time code runs only during recording.

⓴ PRESET/REGEN switch

PRESET: To use the internal TC generator in the Preset mode (with the INT/EXT switch set to INT), or to use an external TC generator via the TIME CODE IN connector (with the INT/EXT switch set to EXT).

REGEN: To use the internal TC generator in sync with either the playback time codes (with the INT/EXT switch set to INT), or externally input time codes (with the INT/EXT switch set to EXT).

㉑ INT/EXT switch

INT: To use the internal TC generator.

EXT: To use an externally-connected LTC/VITC generator.

㉒ AUTO/LTC/VITC switch

- To select the TC reader mode. Select the mode according to the type of reference time code with which the internal TC generator is synchronised in the Regen mode.

AUTO: For tapes with matching VITC and LTC data. Counts time codes in VITC at tape speeds lower than normal, and in LTC at speeds higher than normal. Missing sections are interpolated with CTL counts.

LTC: For LTC-only tapes or when editing with LTC data. Counts time codes in CTL at tape speeds lower than normal and higher than 10 times normal, and in LTC at speeds higher than normal. Missing sections are interpolated with CTL counts.

VITC: For VITC-only tapes or when editing with VITC data. Counts time codes in VITC at tape speeds lower than 10 times normal, and in CTL at speeds higher than 10 times normal. Missing sections are interpolated with CTL counts.

㉓ Test points

V-RF test point

- Outputs the video head FM signal during playback.
- Can be used for detection of clogged or worn heads.

A-RF test point

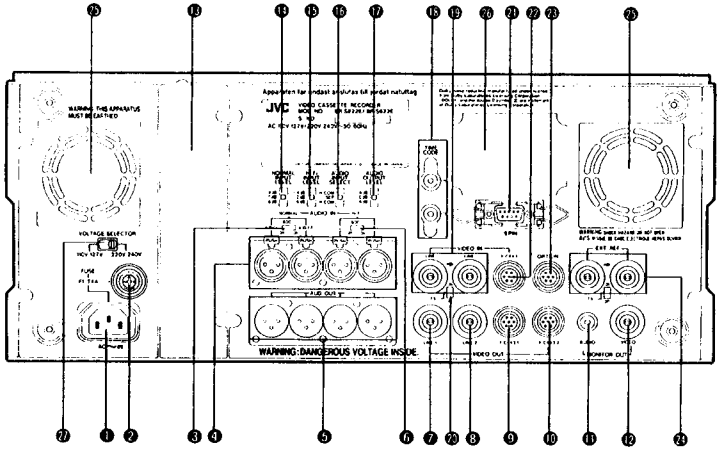
- Outputs the Hi-Fi audio FM signal during playback.
- Can be used for detection of clogged or worn heads.

D-PULSE pin

- Connect to the external trigger terminal of an oscilloscope.

GND

- Connect to the ground terminal of an oscilloscope.



❶ AC IN socket
- Connect to 110 – 120 V or 220 – 240 V AC, 50/60 Hz power outlet.

❷ Fuse holder

❸ NORM AUDIO INPUT impedance select switch
ON: 600 ohms.
OFF: 10 k-ohms. Normally set to this position.

❹ Audio input connectors
AUDIO IN NORMAL: Normal audio input connectors for Audio-1 and Audio-2.
AUDIO IN Hi-Fi: Hi-Fi audio input connectors for Left and Right.

❺ Audio output connectors
AUDIO OUT NORMAL: Normal audio output connectors for Audio-1 and Audio-2.
AUDIO OUT Hi-Fi: Hi-Fi audio output connectors for Left and Right.

❻ Hi-Fi AUDIO INPUT impedance select switch
ON: 600 ohms.
OFF: 10 k-ohms. Normally set to this position.

❼, ❽ VIDEO OUT LINE (1, 2) connectors
- The composite video signal is output from these connectors.

❾, ❿ VIDEO OUT Y/C443 (1, 2) connectors
- The Y/C443 signal is output from these connectors.

⓫ AUDIO MONITOR OUT connector
- The audio signal selected with the AUDIO MONITOR select switches is available at this connector.

⓬ VIDEO MONITOR OUT connector
- The composite video output signal is available at this connector. On-screen information is also supplied.

⓭ Expansion slot
- For installation of optional interface (SA-K28E or SA-K27E).

⓮ NORMAL INPUT LEVEL select switch
- To select -6 dB, 0 dB, or +4 dB according to the level of the normal audio input signal. Both channels are switched simultaneously.

⓯ HI-FI INPUT LEVEL select switch
- To select -6 dB, 0 dB, or +4 dB according to the level of the Hi-Fi audio input signal. Both channels are switched simultaneously.

⓰ AUDIO INPUT SELECT switch
H COM: "Hi-Fi Combined" recording. Set to this position to record audio signals input to the AUDIO IN Hi-Fi connectors on both the Hi-Fi and Normal audio tracks.
SEP: "Separate" recording. Set to this position to record audio signals input to the AUDIO IN Hi-Fi and NORMAL connectors separately on the Hi-Fi and Normal audio tracks.
N COM: "Normal Combined" recording. Set to this position to record audio signals input to the AUDIO IN NORMAL connectors on both the Hi-Fi and Normal audio tracks.

⓱ AUDIO OUTPUT LEVEL select switch
- To select -6 dB, 0 dB, or +4 dB according to the input level of connected audio equipment. All four audio channels are switched simultaneously.

⓲ TIME CODE IN/OUT connectors
Set menu item #206 to "01 – LTC" to record LTC time codes on the normal audio-2 track.
- Connect a time code generator to the IN connector for external time code recording.
- Connect a time code reader to the OUT connector for external time code reading.

⓳ VIDEO IN LINE connectors
- The composite video signal is input to the left connector.
- To output the loop-through signal to another unit, set the 75-ohm terminating switch to OFF.

⓴ 75-Ohm terminating switch
ON: The loop-through signal is terminated at the BR-S622E.
OFF: The loop-through signal is output to another unit.

㉑ 9-PIN connector
- Connect to an RS-422 9-pin serial remote control unit or to the RS-422 9-pin connector of a recorder for swap editing.

㉒ VIDEO IN Y/C443 connector
- The Y/C443 signal is input to this connector.

㉓ OPTION connector
- Delivers the Y/C 686/Y/C 924 signal (with optional SA-E92E Output board installed) to the DUB IN connector of 3/4" U-VCR machines.

㉔ EXT REF connectors with 75-ohm terminating switch
- Supply the reference signal (either black burst signal or composite video) to the left connector and set the 75-ohm terminating switch to ON.
- To output a loop-through signal to another unit, set the 75-ohm terminating switch to OFF.

NOTE:
- When using the SA-T22E, do not use a black-and-white signal or sync signal without burst as the reference signal, otherwise the intended synchronisation will not be obtained.

㉕ Fans

㉖ Expansion slot
For installation of COMPONENT OUT connector board when optional SA-T22E TBC is installed.
- Y/R-Y/B-Y output connectors: MII or Betacam component signal is output.
- TBC remote terminal: Connect a 15-pin remote controller for TBC operation.

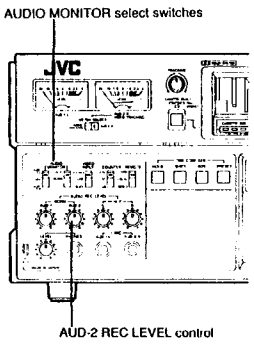
㉗ VOLTAGE SELECTOR
- Select voltage according to your local power supply. (Be sure the POWER is off when setting the voltage.)

AUDIO DUBBING

To simplify insertion of an additional or new soundtrack (such as narration or music) on a previously-recorded tape, the BR-S622E is equipped with an audio dubbing function. Microphone or other external audio input can be recorded directly on the normal audio-2 track.

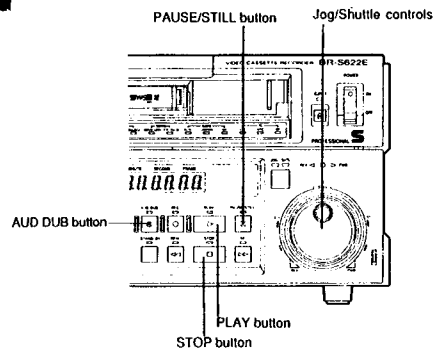
PREPARATION

- Connect a microphone to the AUD-2/R MIC connector or connect an audio source to the rear panel NORMAL AUDIO IN AUD-2/R connector.
- Load a cassette.
- Set the AUDIO MONITOR select switches to NORM and MIX or AUD-2/R.
- Adjust the audio recording level as required with the AUD-2 recording level control.
- If menu item #206 is set to "01 – LTC", LTC can be inserted.



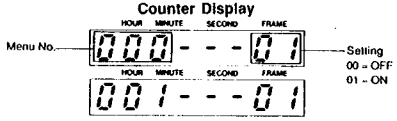
PROCEDURE

1. Search for the audio dubbing IN point.
   - Use the Jog/Shuttle controls to locate the IN point.
2. Engage the Still mode at the IN point.
3. Press AUD DUB and PLAY together to start audio dubbing.
   - The AUD DUB and PLAY indicators will light.
4. Press PAUSE/STILL to temporarily stop audio dubbing.
5. Press PLAY to re-start audio dubbing.
6. Press STOP to end audio dubbing.

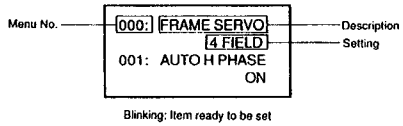


MENU SETTINGS

Counter Display



On-Screen Display



Blinking: Item ready to be set

NOTE:
For items with more setting variations, 02, 03 ... are displayed.
In such cases, 00/01 does not mean OFF/ON.

(Initial settings are in brackets.)

Menu No.		On-Screen Description	Settings		Explanation
			Counter	On-Screen	
SERVO	000	FRAME SERVO	00	OFF	OFF: To defeat Frame Servo. When random-interlaced or low-S/N video signals are used, set to OFF.
			[01]	[4 FIELD]	4 FIELD: To use Colour Frame Servo when editing in colour frame servo mode.
			02	2 FIELD	2 FIELD: To use Frame Servo.
	001	AUTO H PHASE	00	OFF	OFF: To defeat Auto H-Phase Lock. Set to OFF for animation or CG recording.
			[01]	[ON]	ON: To use Auto H-Phase Lock. Normally set to ON.
VIDEO	100	SWITCHING POINT *1	[00]	[REC6.5H, PB4.5H]	Selects head switching point. REC6.5H, PB4.5H: To position head switching point 6.5H ahead of V sync in recording, and to shift it 2H in playback (1H lower than normal). Normally use this setting.
			01	REC6.5H, PB5.5H	REC6.5H, PB5.5H: To position head switching point 6.5H ahead of V sync in recording, and to shift it 1H in playback.
			02	REC2.25H, PB1.25H	REC2.25H, PB1.25H: To position head switching point 2.25H ahead of V sync in recording, and to shift it 1H in playback. Use this setting when you want a lower switching point for closed-circuit systems.
	101	S-VHS REC. EQ.			Selects video frequency response according to the characteristics of the tape used.
			00	TAPE TYPE-1	TAPE TYPE-1: Do not use this setting.
			[01]	[TAPE TYPE-2]	TAPE TYPE-2: Professional-S tape or other double-coated tapes.
			02	TAPE TYPE-3	TAPE TYPE-3: S-VHS master tape.
			03	TAPE TYPE-4	TAPE TYPE-4: Do not use this setting.
	102	U-VCR Y/C MODE			Selects the mode of the signal output via rear panel OPTION (Y-686/924) connector. (Effective with SA-E92E board)
			[00]	[CONV.]	CONV.: To output Y-686/924 dubbing signal to conventional 3/4" U-VCR machines.
			01	HB/SP	HB/SP: To output Y-686/924 dubbing signal to 3/4" U-VCR SP or Hi-Band machines.
	103	WIDE ASPECT ID REC.			Selects recording in wide aspect format (16:9 aspect ratio) or normal format (4:3 aspect ratio).
			[00]	[AUTO]	AUTO: Automatically detects wide aspect ID of input signal (Y/C input only) and records in wide aspect format.
			01	WIDE	WIDE: Records in wide aspect format regardless of the format of input signal. When recording wide-aspect pictures via composite input, use this setting.
			02	NORM.	NORM.: Records in normal aspect format regardless of the format of input signal.

Menu No.		On-Screen Description	Settings		Explanation
			Counter	On-Screen	
VIDEO	104	COMPONENT OUT LEVEL	[00]	[LOW]	Selects the level of component signals output via rear panel Y/R-Y/B-Y connectors. (Effective with SA-T22E) LOW: To output component signals to MII machines.
			01	HIGH	HIGH: To output component signals to Betacam machines.
AUDIO	200	Hi-Fi AUDIO REC.	00	OFF	OFF: To defeat Hi-Fi audio recording.
			[01]	[ON]	ON: To record Hi-Fi audio.
	201	NORM. AUDIO DOLBY NR	00	OFF	OFF: To defeat Dolby NR circuit for normal audio.
			[01]	[ON]	ON: To activate Dolby NR circuit for normal audio.
	202	AUDIO LIMITER	00	OFF	OFF: To defeat audio limiter for normal audio tracks.
			[01]	[ON]	ON: To activate audio limiter for normal audio tracks to avoid over-level recording. (Audio recording level adjustment is possible with limiter ON.)
	203	AUDIO OUT	[00]	[SEP.]	Selects output signals via rear panel AUDIO OUT connectors. SEP.: To output as labelled: normal audio from NORMAL AUD-1/AUD-2, Hi-Fi audio from Hi-Fi L/R.
			01	Hi-Fi	Hi-Fi: To output Hi-Fi audio from all connectors: NORMAL AUD-1 outputs Hi-Fi left-channel signal and NORMAL AUD-2 outputs Hi-Fi right-channel signal.
			02	NORM	NORM: To output normal audio from all connectors: Hi-Fi L outputs normal audio-1 signal and Hi-Fi R outputs normal audio-2 signal.
	204	Hi-Fi OUT AT SEARCH	[00]	[MUTE]	Selects output signals via rear panel Hi-Fi AUDIO OUT connectors during search. MUTE: To output muted Hi-Fi audio.
			01	NORM	NORM.: To output normal audio.
	205	AUD-1 REC.	[00]	[AUD-1]	Selects audio signals to be recorded on the normal audio-1 track. AUD-1: Audio signals input to AUD-1 are recorded.
			01	AUD-1/2 MIX	AUD-1/2 MIX: Mixed audio signals input to AUD-1 and AUD-2 are recorded. (Levels are controlled independently with the corresponding control.) Nothing is recorded on the normal audio-2 track unless menu item #206 is set to "01 – LTC".
	206	AUD-2/LTC *2	[00]	[AUD-2]	Selects signals to be recorded on the normal audio-2 track. AUD-2: Audio signals input to AUD-2 are recorded.
			01	LTC	LTC: LTC signal is recorded.
SYSTEM	300	DIRECT EJECT	00	DISABLE	DISABLE: EJECT command is accepted only from Stop mode.
			[01]	[ENABLE]	ENABLE: EJECT command is accepted from any mode.
	301	DIRECT SEARCH	00	DISABLE	DISABLE: Jog/Shuttle dials do not function unless JOG/SHTL button is pressed first.
			[01]	[ENABLE]	ENABLE: Jog/Shuttle dials function directly from Stop, Play, Still, FF and REW modes.
	302	AUTO REC. PREROLL	00	DISABLE	DISABLE: Enters Record-Pause mode without preroll. Picture will be distorted at record-start point.
			[01]	[ENABLE]	ENABLE: Enters Record-Pause mode with preroll of about 3 seconds.
	303	WARNING INHIBIT	[00]	[OFF]	OFF: Malfunctions are detected for warning indications. Normally keep set to this position.
			01	ON	ON: Detection of malfunctions is inhibited. No warning indication is available.
	304	RECORDING INHIBIT	[00]	[OFF]	OFF: Recording is possible with cassettes with safety tab in place.
			01	ON	ON: Recording is inhibited regardless of the presence of safety tab. Use this position if the VCR is used only as a player.
	305	REPEAT REC.	[00]	[DISABLE]	*This setting is for manufacturer adjustment purposes only. Always keep set to DISABLE.*
			01	ENABLE	

Menu No.		On-Screen Description	Settings		Explanation
			Counter	On-Screen	
SYSTEM	306	LONG PAUSE	00	DISABLE	DISABLE: To defeat Long Pause function.
			[01]	[ENABLE]	ENABLE: To use Long Pause function in Standby-On, Still and Record-Pause modes. (Long Pause parameters are selected with menu items #307, #308 and #309.)
	307	LONG PAUSE TIME	00	1 SEC	With menu item #306 set to ENABLE, selects the length of time before normal Pause (Standby-On, Still and Record-Pause) mode changes to Long Pause.
			01	10 SEC	
			02	30 SEC	
			03	1 MIN	
			04	2 MIN	
			05	3 MIN	
			06	4 MIN	
			[07]	[5 MIN]	
	308	LONG PAUSE (STILL)			Selects the contents of Long Pause mode. (After the time set with menu item #307 expires in Still or Record-Pause mode, the VCR operates as specified.)
			00	STANDBY-OFF	STANDBY-OFF: Enters Standby-Off mode.
			01	T. RELEASE	T. RELEASE: Tension arm is released for tape protection. Still pictures continue to be available.
			[02]	[STEP FWD]	STEP FWD: Tape advances in slow-motion for about 2 seconds (about 2 frames). This action is repeated 5 times at the time intervals set with menu item #307. The VCR enters the Standby-Off mode after the final interval.
	309	LONG PAUSE (STOP)			Selects the contents of Long Pause mode. (After the time set with menu item #307 expires in the Standby-On mode, the VCR operates as specified.)
			[00]	[STANDBY-OFF]	STANDBY-OFF: Enters Standby-Off mode.
			01	T. RELEASE	T. RELEASE: Tension arm is released for tape protection.
			02	STEP FWD	STEP FWD: Tape advances in slow-motion for about 2 seconds (about 2 frames). This action is repeated 5 times at the time intervals set with menu item #307. The VCR enters the Standby-Off mode after the final interval.
	310	STANDBY-OFF MODE	00	DRUM ON	Selects the status of Standby-Off mode. DRUM ON: Head drum continues to rotate with tape loaded.
			[01]	[DRUM OFF]	DRUM OFF: Head drum stops rotating with tape loaded.
			02	UNLOAD	UNLOAD: Head drum stops rotating and tape unloads.
	311	MODE AT TAPE BEGIN			Selects the mode entered when the beginning of the tape is detected.
			[00]	[SHORT-FF]	SHORT-FF: Fast-forwards the leader section and enters Standby-On mode.
			01	PLAY	PLAY: Enters Play mode.
	312	MODE AT TAPE END			Selects the mode entered when the end of the tape is detected.
			[00]	[SHORT-REW]	SHORT-REW: Rewinds the leader section and enters Standby-On mode.
			01	REW	REW: Rewinds to the beginning of tape and enters Standby-On or Play mode depending on the setting of menu item #311.
	313	PB•PB/EE			Selects output signal in the mode specified with menu item #314.
			00	PB/EE	PB/EE: Outputs EE signal.
			[01]	[PB]	PB: Outputs playback signal.
	314	PB/EE MODE			Selects the mode in which EE signal is output.
			[00]	[STOP /FF/REW]	STOP /FF/REW: EE signal is output in Stop, FF and REW modes.
			01	STOP	STOP : EE signal is not output in FF and REW modes.
	315	LOCAL FUNCTION	[00]	[STOP ,EJECT]	Selects functions that can be locally operated when front panel REMOTE switch is set to 9PIN or REM-2.
			01	STP,EJ,PLY,FF, RW,STL	
			02	ALL ENABLE	
			03	ALL DISABLE	

Menu No.		On-Screen Description	Settings		Explanation
			Counter	On-Screen	
SYSTEM	316	9PIN CMD FUNCTION	[00] 01	[ALL DISABLE] STOP ,EJECT	Selects 9-pin remote control commands that are acceptable when front panel REMOTE switch is set to LOCAL. ALL DISABLE: Accepts no command from 9-pin remote control. STOP ,EJECT: Accepts STOP and EJECT commands only. (Note: With some remote controls, no command is accepted.)
	317	9PIN DEVICE TYPE ID	[00] 01 02 03	[JVC SVHS-1] JVC SVHS-2 OTHER TYPE-1 OTHER TYPE-2	Selects device type ID returned from VCR to 9-pin remote control in response to its request. JVC SVHS-1: Use this setting with BR-S622E/BR-S822E. JVC SVHS-2: Use this setting if SA-F911E is included in the system. OTHER TYPE-1/OTHER TYPE-2: Consult a JVC dealer.
	318	TC DATA W/O TC BOARD	[00] 01	[TC MISSING] CTL DATA	Selects VCR's response to 9-pin remote control when remote control requests time code data when TC board is not installed. TC MISSING: VCR returns code meaning TC MISSING. CTL DATA: VCR returns substitute CTL data.
	319	TAPE MAX SPEED	[00] 01 02	[X100] X32 X16	Selects maximum tape speed (full-size cassette only). (FF and REW speeds also correspond to this setting. In the 100x mode, the EE signal is output. In the 32x and 16x search modes, the playback signal is output. The CTL signal is output in the 16x search mode using the RM-86U 45-pin remote control.)
	320	PREROLL TIME	00 ⋮ [07] ⋮ 15	0 SEC ⋮ [7 SEC] ⋮ 15 SEC	Selects preroll time in one-second steps from 0 to 15 seconds.
	321	TIME REF. FOR PREROLL	00 [01]	CTL [TC]	Selects time count reference for preroll in TC operation. CTL : Refers to CTL counts. Preroll is possible even when time codes are missing. TC : Refers to time codes.
	322	IN POINT AUTO ENTRY	00 [01]	NOT ENTERED [ENTERED]	Activates or defeats automatic IN point entry function. NOT ENTERED: IN point is not entered automatically by pressing PREROLL button. ENTERED: IN point is entered automatically by pressing PREROLL button if no IN point has been previously entered.
	323	MODE AFTER PREROLL	[00] 01	[STOP] STILL	STOP : Enters Stop mode after preroll is completed. STILL : Enters Still mode after preroll is completed.
	324	EDIT FIELD	[00] 01	[1st] 2nd	1st: Starts recording on the first field and ends on the second field. 2nd: Starts recording on the second field and ends on the first field. Use this setting when inserting two pictures in one frame for animation.
	325	CTL COUNTER MODE	[00] 01	[±9H] 24H	±9H: Counter shows from −9 to +9 hours in CTL mode. 24H: Counter shows from 0 to 24 hours in CTL mode.
	326	CTL COUNTER MEMORY	[00] 01	[OFF] ON	OFF: No counter memory function is available. ON: Enters Stop mode at CTL counter reading of zero in FF and REW modes.
	327	CTL CLEAR AT EJECT	00 [01]	DISABLE [ENABLE]	DISABLE: CTL counter is not reset when cassette is ejected. ENABLE: CTL counter is reset when cassette is ejected.

Menu No.		On-Screen Description	Settings		Explanation
			Counter	On-Screen	
SYSTEM	332	CASSETTE SEL. INHIBIT	[00] 01	[OFF] ON	OFF: Cassette size selection is possible with the CASSETTE SELECT button on the front panel. ON: Cassette size selection is inhibited.
	333	CF SERVO LOCK REPLY	00 [01]	DISABLE [ENABLE]	Selects information to deliver to 9-pin remote. DISABLE: Colour frame servo lock cannot be engaged. ENABLE: Colour frame is locked to 4-field colour framing mode.
	334	CF RE-LOCK AT PLAY	[00] 01	[DISABLE] ENABLE	Activates or defeats colour frame re-lock function when colour frame lock is disengaged in Play mode.
TIME CODE	400	VITC POSITION-1	00 ⋮ [12] ⋮ 15	7LINE ⋮ [19LINE] ⋮ 22LINE	Selects the horizontal scanning line on which VITC data is stored. Selectable from line 7 to line 22 in the vertical blanking interval. • Do not select line 11 in S-VHS recording as this is reserved for AUTO EQ. • When using the SA-T22E TBC board, set above line 9.
	401	VITC POSITION-2	00 ⋮ [14] ⋮ 15	7LINE ⋮ [21LINE] ⋮ 22LINE	Selects the horizontal scanning line on which VITC data is stored. Selectable from line 7 to line 22 in the vertical blanking interval. (Two lines per field are used to store VITC data.) • Do not select line 11 in S-VHS recording as this is reserved for AUTO EQ signal. • When using the SA-T22E TBC board, set above line 9.
	403	TCG REGEN MODE	[00] 01 02	[TC & UB] TC UB	Selects code data to be regenerated in Internal Regen mode (with TC board's INT/EXT switch set to INT and PRESET /REGEN switch set to REGEN.) TC & UB: Records both time code and user bit data in Regen mode. TC: Records time code data in Regen mode and user bit data in Preset mode. UB: Records user bit data in Regen mode and time code data in Preset mode.
	404	TC SOURCE AT REGEN	[00] 01	[LTC] VITC	Selects the type of reference time code in the Regen mode. LTC : Reference code is LTC. VITC : Reference code is VITC.
	405	LTC OUT (REGEN)	[00] 01	[OFF TAPE] TCG	Selects output signal from TIME CODE OUT connector while playback is in progress in Internal Regen mode. OFF TAPE: Outputs time code signal picked up from tape. TCG: Outputs time code signal regenerated by TC generator.
	406	U-BIT BINARY GROUP	[00] 01 02 03	[NOT SPECIFIED] ISO CHAR. UNASSIGNED-1 UNASSIGNED-2	Selects character set configuration to use TC generator's user bits. NOT SPECIFIED: Character set configuration is not specified. ISO CHAR.: 8-Bit character set conforming to ISO 646 and ISO 2022 (with binary group flags at bit counts 43 and 59 in LTC; at 55 and 75 in VITC.) UNASSIGNED-1: Undefined. UNASSIGNED-2: Undefined.
	407	PHASE CORRECTION BIT	00 [01]	OFF [ON]	Selects recording of LTC phase correction bit (parity bit for bit error check). OFF : Not recorded. (Use this setting if 10s readout is not correct with external TC reader connected.) ON: Recorded.
	408	VITC LINE	[00] 01	[VITC MIX] CLEAN ONLY	Selects whether lines set with menu items #400 and #401 are to be cleaned in recording. VITC MIX: VITC is recorded after lines are cleaned. CLEAN ONLY: Lines are cleaned.
	409	EXT REGEN TC	[00] 01	[LTC] VITC	Selects the type of externally input reference time code in External Regen mode. LTC: To use LTC via TIME CODE IN connector. VITC: To use VITC via VIDEO IN connector.

Menu No.		On-Screen Description	Settings		Explanation
			Counter	On-Screen	
ON-SCREEN	500	ON-SCREEN DISPLAY	00 [01]	OFF [ON]	OFF: No data is displayed on-screen. ON: Data is displayed on-screen.
	501	CHAR. H-POSITION	[00] ⋮ 08	[00] ⋮ 8	Adjusts on-screen VCR data display position in the horizontal direction. 0 : VCR data is displayed at the rightmost position. 1 - 8: Display position shifts to the left with increasing numbers.
	502	CHAR. V-POSITION	[00] ⋮ 09	[00] ⋮ 9	Adjusts on-screen VCR data display position in the vertical direction. 0 : VCR data is displayed at the bottom of screen. 1 - 9: Display position shifts up with increasing numbers.
	503	CHAR. BACKGROUND	[00] 01 02	[BORDER] SEMI. BLACK	BORDER: Displays bordered characters. SEMI.: Displays semi-transparent characters. BLACK : Displays characters on black background.
	504	INFORMATION	00 [01]	TIME [TIME & MODE]	Selects available on-screen information. TIME: Time counter data. TIME & MODE: Time counter data, operation mode and Jog/Shuttle tape speed.
TBC	600	TBC FREEZE	[00] 01	[DISABLE] ENABLE	Selects the mode of still pictures in TBC operation. DISABLE: Outputs normal still pictures. ENABLE: Outputs 'freeze' still pictures from TBC's field memory when PAUSE/STILL button is pressed while in Play mode.
	601	V BLANK MASK	[00] 01	[OFF] ON	Activates or defeats vertical blanking interval masking function in TBC operation. OFF: No masking function. ON: Masks the entire vertical blanking interval in playback to erase VITC. VITC readout is impossible with this setting.

*1: When you set this item to "02 – REC 2.25H/PB 1.25H" in recording, be sure to set it to this position when playing back the tape in the TBC mode.
*2: When playing back a tape with no LTC recorded on the normal audio-2 track, set this item to "00 – AUD-2".

SPECIFICATIONS

GENERAL

Format	:	VHS/S-VHS Europe standard
Power consumption	:	90 W
Power requirment	:	AC 110 – 127 V/220 – 240 V~, 50/60 Hz
Dimensions	:	42.9 (W) X 18.8 (H) X 56.5 (D) cm
Weight	:	23 kg
Operating temperature	:	5°C to 40°C
Storage temperature	:	–20°C to 60°C
Tape speed	:	23.39 mm/sec
Recording & Playback time	:	Max. 180 min. with JVC SE-180/E-180
Fast forward/ Rewind time	:	Less than 2.5 min. for 180 min. tape

VIDEO

Recording and playback	:	Rotary two-head helical scanning system
Luminance	:	FM recording
Colour signal	:	Phase shift, converted sub-carrier direct recording
Video signal system	:	PAL-type colour signal/PAL-type Y/C signal
Input		
Line	:	1.0 Vp-p, 75 ohms, unbalanced
Y/C 443	:	Y: 1.0 Vp-p, 75 ohms, unbalanced C: 0.3 Vp-p, 75 ohms, unbalanced (Burst)
Output		
Line	:	1.0 Vp-p, 75 ohms, unbalanced
Y/C 443	:	Y: 1.0 Vp-p, 75 ohms, unbalanced C: 0.3 Vp-p, 75 ohms, unbalanced (Burst)
Signal-to-noise ratio	:	More than 46 dB (S-VHS) More than 45 dB (VHS)
Horizontal resolution	:	More than 400 lines (S-VHS) More than 250 lines (VHS)
Reference video input	:	0.3 to 1.0 Vp-p, 75 ohms, unbalanced (with loop-through, with the SA-T22E)
External sync input	:	0.3 to 4.0 Vp-p, 75 ohms, unbalanced (with one loop-through, without the SA-T22E)

AUDIO

Input		
Line	:	–6/0/+4 dBs, 10 k-ohms/600 ohms, balanced (Hi-Fi/Normal)
Mic	:	–67 dBs, 10 k-ohms, unbalanced
Output		
Line	:	–6/0/+4 dBs, Low impedance, balanced (Hi-Fi/Normal)
Monitor	:	–6 dBs, Low impedance, unbalanced
Phones	:	∞ to –17 dBs, 8 ohms
Signal-to-noise ratio	:	More than 43 dB (NR-off, Normal at 3% distortion)
Dynamic range	:	More than 87 dB (Hi-Fi)
Frequency response	:	20 to 20,000 Hz (Hi-Fi) 40 to 12,000 Hz (Normal)
Wow & flutter	:	Less than 0.005% WRMS (Hi-Fi) Less than 0.3% RMS (Normal)

TIME CODE

Input	:	0 dB ± 6 dBs, 10 k-ohms, unbalanced
Output	:	0 dB ± 3 dBs, Low impedance, unbalanced

CONNECTORS

Video		
Line input	:	BNC-type connector
Line output	:	BNC-type connectors
Y/C 443 input/output	:	7-pin connectors
Monitor	:	BNC-type connector
Audio		
Hi-Fi input/ output	:	XLR connectors
Normal input/ output	:	XLR connectors
Monitor	:	RCA connector
Remote control	:	9-pin connector

ACCESSORIES

Provided accessories	:	7-pin cable

Design and specifications subject to change without notice.

SECTION 1
GENERAL DESCRIPTION AND DISASSEMBLY

1.1 REMOVAL OF EXTERNAL COVERS

1.1.1 Top cover

1. Remove two screws Ⓐ and lift the top cover by the rear to remove it upward.

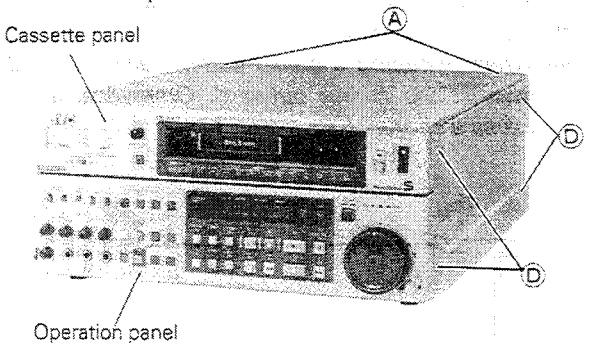


Fig. 1-1-1

1.1.2 Cassette panel (Upper part of the front panel)

1. Remove the top cover.
2. Remove three screws Ⓑ and lift up the cassette panel to the front side while taking it off.
3. For removing the cassette panel entirely from the main body, disconnect the relay connector and connectors connected with the operation panel.

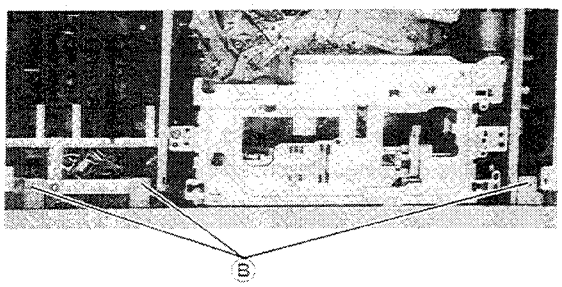

Fig. 1-1-2

1.1.3 Operation panel (Lower part of the front panel)

1. Remove the top cover and the cassette panel.
2. Remove two screws Ⓒ from the both sides of the operation panel.
3. Draw the connector out of the main body while disconnecting it.
4. Draw the operation panel frontwoard while removing it.

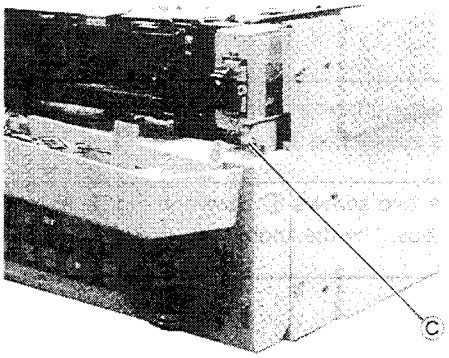

Fig. 1-1-3

1.1.4 Side covers

1. Remove the top cover and the cassette panel.
2. Remove four screws Ⓓ (see Fig. 1-1-1) and take off a side cover.
3. Remove the other side cover in the same manner.

1.1.5 Bottom cover

1. Remove the left side cover.
2. Raise the set so as to stand on its rear panel.
3. Remove five screws Ⓔ and take off the bottom cover.

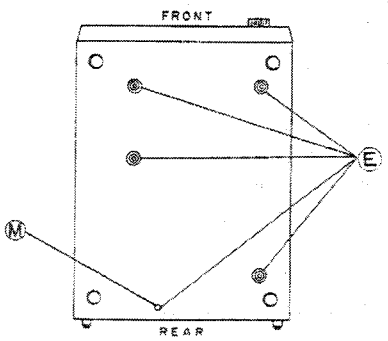

Fig. 1-1-4

1.1.6 Rear panel

Remove screws retaining the side cover in the rear panel side.

– Rear panel (A) –

1. Remove four screws Ⓕ and two feet Ⓖ.
2. Remove the rear panel (A).

– Rear panel (B) –

3. Remove two screws Ⓘ and two feet Ⓙ.
4. Remove the rear panel (B).

– Rear panel (C) –

5. Remove two screws Ⓛ to remove the rear panel (C).

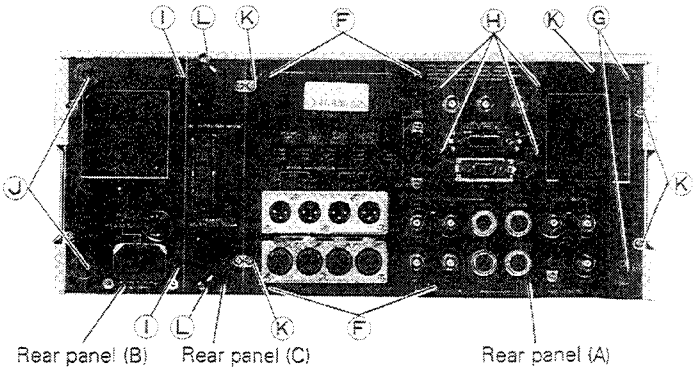

Fig. 1-1-5 (45-PIN board is optional.)

1.1.7 Rear bracket

1. Remove two screws retaining the left side cover in the rear panel side.
2. Remove five screws Ⓚ (see Fig. 1-1-5) and a screw Ⓜ (see Fig. 1-1-4) to remove the rear bracket.

1.2 REMOVAL OF MAIN BOARDS

Note: • When removing/installing any P. C. board, cut off the power supply beforehand.
• Make sure to reinstall any P. C. board as it was originally assembled.

Group	Board Name	Extension Board	Removing and Resetting Manner
A	[0][5] FUSE [1][6] R/P ADJUST [1][7] Y COMB [1][9] OUTPUT [2][2] AUDIO-2 [2][3] AUDIO-3 [4][1] AVM/OS [6][1] TBC-2 (Optional) [6][2] TBC-3 (Optional) [6][6] U-VCR Y/C OUT (Optional)	PGJ05044	1) Remove the top cover. 2) After removing the board holder, pull up the ejector of the board for removal. *Note: When installing a shield plate, place it with the instructions facing outward. Otherwise, it may cause a shortcircuit.* 	[1][0] R/P Y [1][1] R/P COLOR 1 [1][2] R/P COLOR 2 [6][0] TBC-1 (Optional)	PGJ05043	
B	[4][0] SYSCON [6][5] TC G/R (Optional)	PGJ05043 x2 PGJ05045 (TC G/R)	1) Open the operation panel. 2) Remove two lock screws, and draw out the SYSCON board to remove. 3) The TC G/R board is inserted into the SYSCON board.
C	[0][1] MOTHER 1 [0][2] MOTHER 2 [3][0] D/C SERVO [3][1] M. CTL/R. SERVO	—	1) Raise the set so as to stand on the rear panel, and remove the bottom cover. (Refer to Sec. 1.1.5) 2) Proceed to do things described in "1.2.1 Group C".
D	[2][4] AUDIO-4 [2][5] AUDIO-5 [7][1] REAR-1 [7][2] REAR-2 [7][3] REAR-3 [7][4] REAR-4 (Optional)	—	1) Remove the rear bracket (see 1.1.7). 2) Proceed to do things described in "1.2.2 Group D".
E	[2][0] FMA PRE [2][1] AUDIO-1	—	1) Take off the top cover. For the AUDIO-1 board, remove the right side cover. (See Fig. 1-2-1.) 2) Release the hinge to unlatch the board and disconnect connectors while removing the board.
F	[4][2] OPERATION CPU [4][3] OPERATION KEY-1 [4][4] OPERATION KEY-2 [2][6] AUDIO-6 (Incl. [2][7] JACK, [2][8] VR)	—	1) Open the operation panel. 2) Proceed to do things described in "1.2.3 Group F".
G	[1][5] PRE/REC	—	1) Refer to the upper drum replacing procedure (1 through 6) in the subsection 2.3.4.
H	[6][7] 45 PIN I/F (Optional) [5][5] RS-232C I/F (Optional)	PGJ05035	1) Remove two screws Ⓛ shown in Fig. 1-1-5, and draw out the board by the knob.

Table 1-2-1

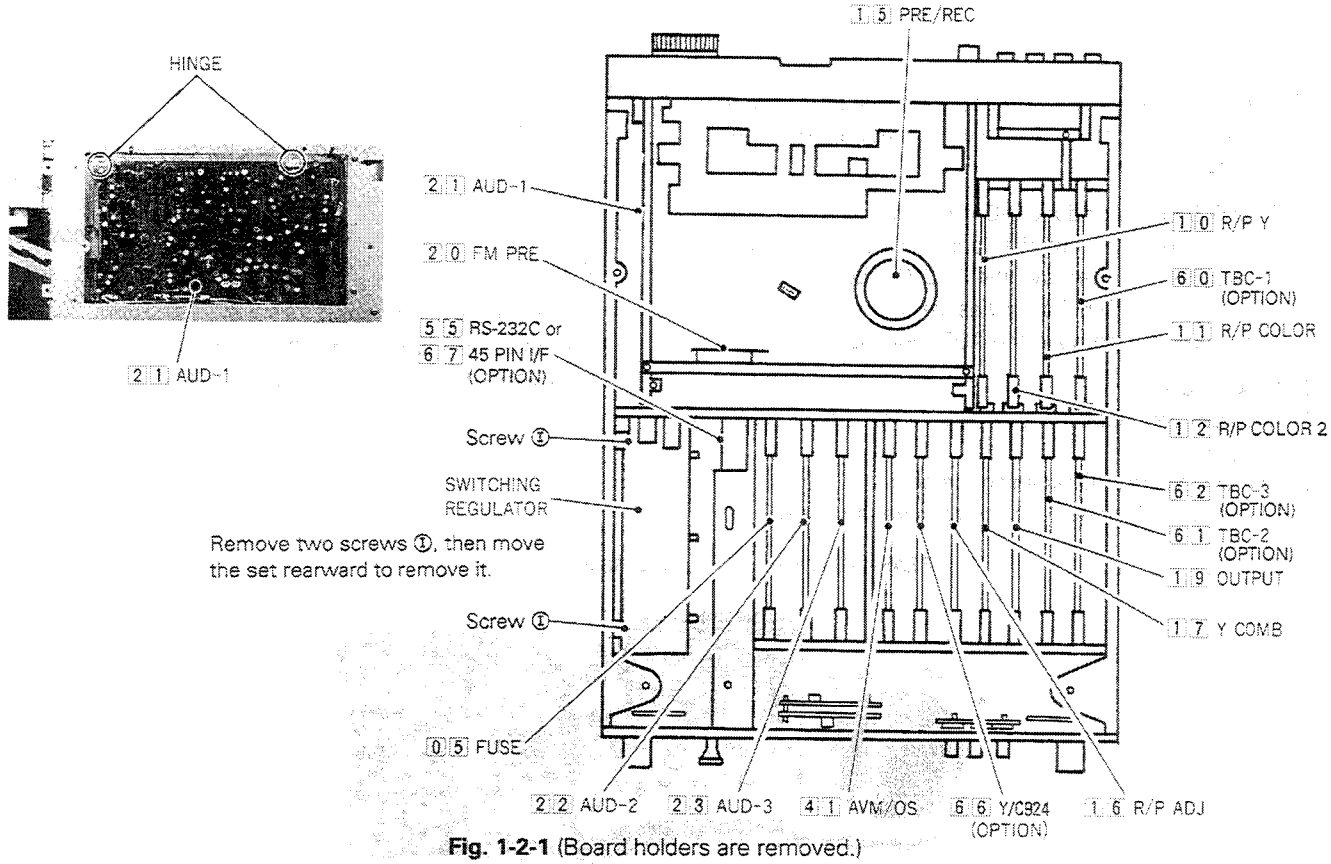

Fig. 1-2-1 (Board holders are removed.)

1.2.1 Group C

1. D/C SERVO board and M. CTL/R. SERVO board

1) With the operation panel opened, stand the set on its rear.
2) Remove two screws Ⓐ and tilt the board frontward.
3) Remove four screws Ⓑ retaining the boards and brackets, and disconnect connectors. Then, the D/C SERVO board and the M. CTL/R. SERVO board can be removed.

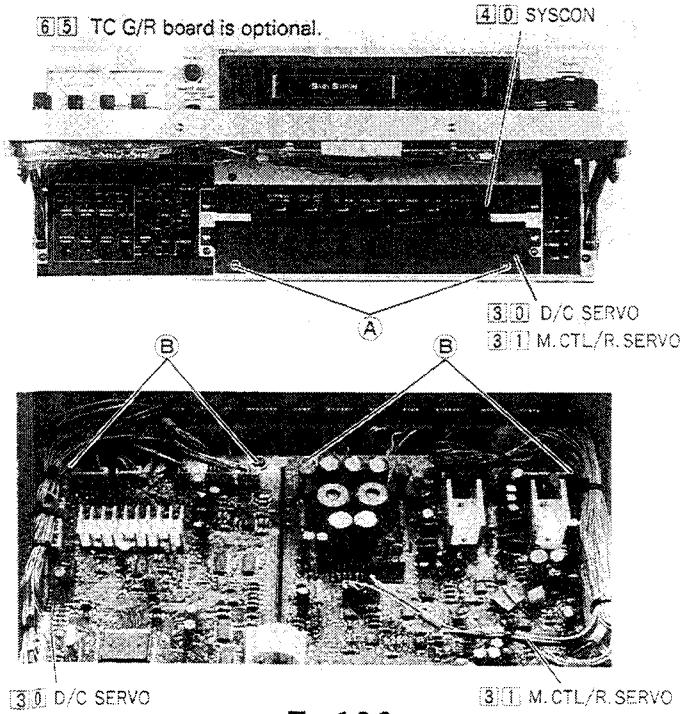

Fig. 1-2-2

2. MOTHER 1 board and MOTHER 2 board

1) Remove all boards belonging to the Group A.
2) Remove twelve screws Ⓒ and connectors to remove the boards.

Note: The MOTHER 1 and the MOTHER 2 boards are connected with a flat cable.

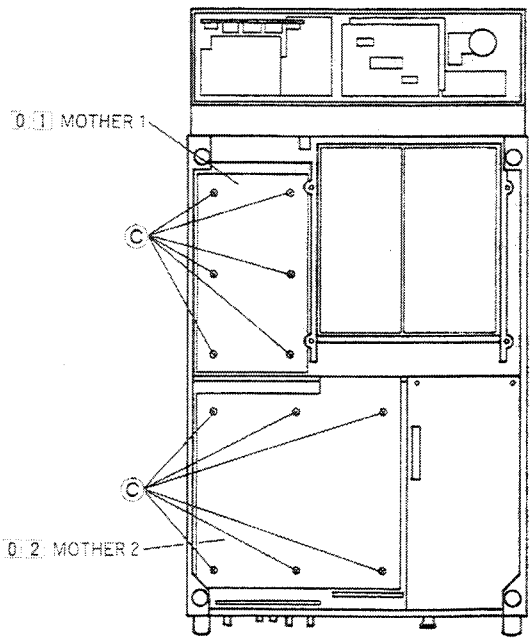

Fig. 1-2-3

1.2.2 Group D

Note: In the BR-S522E, soldering points of connectors are less in number since it is equipped with no input terminal.

1. AUDIO-5 board and AUDIO-4 board
1) Remove spacers from the four corners and disconnect connectors. Then remove the AUDIO-5 board.
2) After the AUDIO-5 board has been removed, remove three screws to remove the AUDIO-4 board.

2. REAR-1 board
1) Unsolder connectors (7 points for BNC, 1 for RCA and 4 for Y/C).
2) Remove a screw Ⓕ retaining the board.
3) Disconnect all connectors and remove the board.

3. REAR-2 board
1) Unsolder the TIME CODE OUT and AUDIO OUT connectors.
2) Unsolder the 9-pin connector and remove the board.

4. REAR-3 board
1) Unsolder the XLR connector at 8 points and remove the board.

5. REAR-4 board (Optional)
1) Remove four screws Ⓗ shown in Fig. 1-1-5 and disconnect connectors to remove the board.

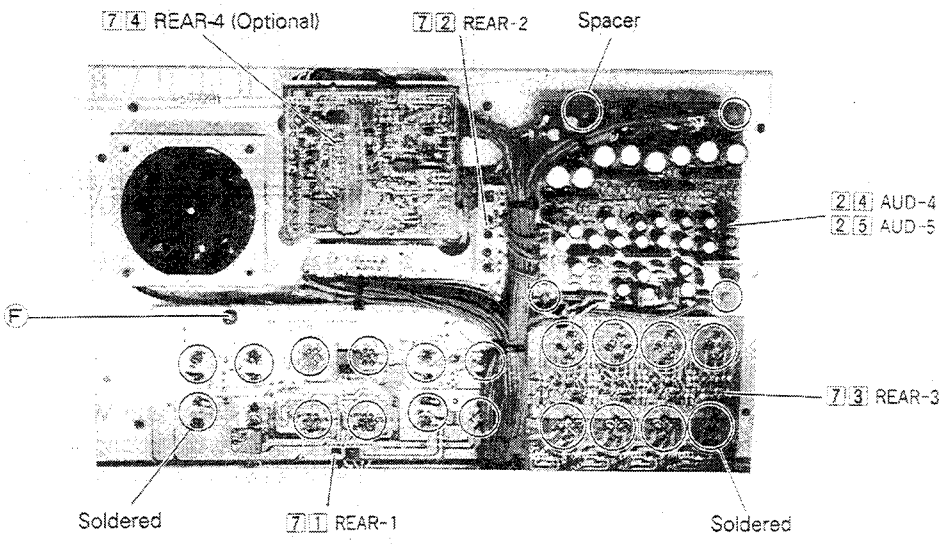

Fig. 1-2-4

1.2.3 Group F

1. OPERATION CPU board
1) Remove four screws Ⓗ and the board cover.
2) Disconnect connectors concerned and remove the board.

2. OPERATION KEY-1 board
1) Remove the OPERATION CPU board.
2) Remove seven screws retaining the OPERATION KEY-1 board.

3. OPERATION KEY-2 board
1) Remove five screws Ⓙ retaining the board cover to remove it.
2) Remove the AUDIO-6 board. (Refer to 1.2.3.4.)
3) Remove four screws retaining the OPERATION KEY-2 board and disconnect connectors concerned to remove the board.

4. AUDIO-6 board (Incl. 2 7 JACK, 2 8 VR boards)
1) Remove five screws Ⓙ retaining the board cover to remove it.
2) Remove all VR knobs.
3) Remove two screws Ⓛ and a screw Ⓚ and disconnect connectors concerned to remove the board.

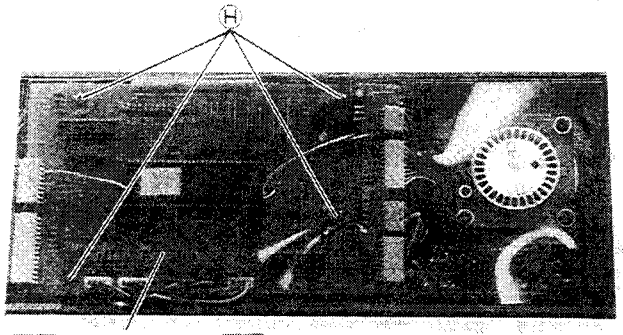

Fig. 1-2-5 (A) (Actually equipped with black cover)

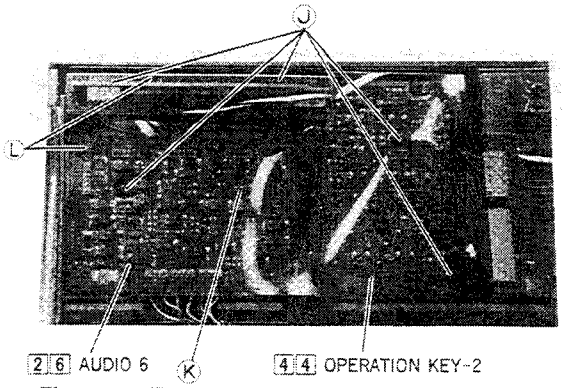

Fig. 1-2-5 (B) (Actually equipped with black cover)

1.3 INTERNAL SWITCHES

Note: • For location of respective switches, see "Location of test points and VRs" at the back of the section 3.
• Numeral and alphabet in parentheses (4 I, for example) following a symbol number indicates the section where the part is located in the board.

1.3.1 Function of switch

[1][0] R/P Y

Symbol No.	Switch Name	Setting at Shipment	Function
S1 (4 I)	DOC switch	S1 OFF [□] ON	ON : DOC circuit is activated except in SEARCH mode. OFF : DOC circuit is inactivated.
S2 (7 E)	SW POINT MASK switch	S2 ON [□] OFF	ON : SW point MASK circuit is activated. OFF : SW point MASK circuit is inactivated.

[1][2] R/P COLOR 2

Symbol No.	Switch Name	Setting at Shipment	Function
S1 (1B)	Adjusting switch	SW1 OFF [□] ON	To be used REF. burst adjustment.
SW301 (A3)	Adjusting switch	Changeable (Set by adjustment.)	To be used in P. burst phase detect adjustment mode.
SW302 (2C)	Adjusting switch	SW302 ADJ. [□] NORM	For adjusting mode of cross talk cancel circuit.
SW303 (2D)	Adjusting switch	SW303 ADJ. [□] NORM	For adjusting mode of cross talk cancel circuit.

[1][6] R/P ADJUST

Symbol No.	Switch Name	Setting at Shipment	Function
S1 (4 E)	Adjusting switch	S1 RAP [□] NORM	RAP : For adjusting mode of playback picture recorded by the same set. For detail, refer to the Technical Guide (No. T-9024) for BR-S822/S622 (Section 6.18 "RAP MODE", page 6-23). NORM : For normal operation Usually set to NORM position.
S2 (4 E)	Adjusting switch	S2 RAP 2 [□] RAP 1	Effective with S1 set to RAP position RAP 1 : For adjusting mode of CH-1 head. RAP 2 : For adjusting mode of CH-2 head.
D23 (4 E)	RAP MODE LED	—	When S1 set to RAP position, RAP MODE LED is turned on.

[6][0] TBC-1 (SA-T22E optional)

Symbol No.	Switch Name	Setting at Shipment	Function
SW1 (7 I)	Adjusting switch (Y/C TIMING)	—	Refer to Item No. 15 "Y/C timing adjustment" in Sect. 3.5.3.
SW2-1 (6 I)	NTSC V. BLANKING PERIOD SELECT switch	SW2  	Invalid with SW2-2 set to OFF.
SW2-2	NTSC/PAL		ON : NTSC (Make sure to set to OFF.) OFF : PAL
SW2-3	Not used		—
SW2-4	Not used		—
SW3 (5 I)	Adjusting switch (FORCED TBC)	SW3  	ADJ (ON) : TBC is activated regardless of setting of TBC switch on the front sub-panel (on the back of operation panel. NOR (OFF): TBC functions according to TBC switch setting.

[6][2] TBC-3 (SA-T22E optional)

Symbol No.	Switch Name	Setting at Shipment	Function
SW1-1 (3 H)	Adjusting switch	SW1  	ON : For decoder adjustment mode OFF : For normal operation Usually set to OFF position.
SW1-2	SYNC DETECT MODE switch		ON : For period detection mode OFF : For width detection mode and period detection mode
SW1-3	W. CLOCK SELECT (1)		ON : For AFC mode OFF : For APC selection mode to affect SW1-4
SW1-4	W. CLOCK SELECT (2)		With SW1-3 set to OFF: ON : For APC mode OFF : For AFC-APC automatic selection mode

6 5 TIME CODE G/R (SA-R22E optional)

Symbol No.	Switch Name	Setting at Shipment	Function
S8-1 (13 A)	VITC H POSITION CHANGE switch	S8 	For changing VITC position in horizontal direction Do not change the setting without reason.
S8-2	UNDEFINED BIT OPERATION switch	(Showing the state of S8 built in SYSCON board)	Bit 58 is not defined for LTC while bit 74 is not defined for VITC. These bits are regarded as "0" until they are defined by SMPTE. ON : "1" OFF : "0" Make sure to set this switch to OFF position usually.
S8-3	Not used		—
S8-4	ERROR BYPASS ON/OFF		ON : To activate the error bypass circuit OFF : To inactivate the error bypass circuit

6 7 45 PIN MAIN (SA-K28E optional)

Symbol No.	Switch Name	Setting at Shipment	Function
SW1 SW2 SW3	Not used	SW1, SW2, SW3	Ineffective when the set is connected with the professional S22 series
SW4-1 (3 A) SW4-2 SW4-3, 4-4	VTR SELECT switch CONTROLLER SELECT switch Not used	SW4 	
Switch	Item	Search Max. Speed Data	CTL Mute (FF/REW)
SW4-1	ON : 22 series	Depends on SW4-2	OFF
	OFF: BR-S605	x7	ON
SW4-2	ON : RM-86	x10	
	OFF: Others	x32	

5 5 RS-232C (SA-K27E optional)

Symbol No.	Switch Name	Setting at Shipment	Function
SW1 SW2 SW3	Not used	SW1, SW2, SW3	Ineffective when the set is connected with the professional S22 series
SW4-1 SW4-2	DATA RATE SELECT switch	SW4 	SW4-3	Not used		—
SW4-4	TEST MODE ON/OFF switch		ON : For normal operation OFF : For test mode (Factory use only) Usually set to ON position.

SW4-1	SW4-2	bps
OFF	OFF	1200
ON	OFF	2400
OFF	ON	4800
ON	ON	9600

1.4 MEMORY SWITCH

Mode setting of this model can be operated with the memory switch, which the hour meter is built in.
For operation of the memory switch, refer to the instruction book (pages 37 through 46 for S822 or pages 26 through 33 for S622).

1.4.1 Initialization of memory switch

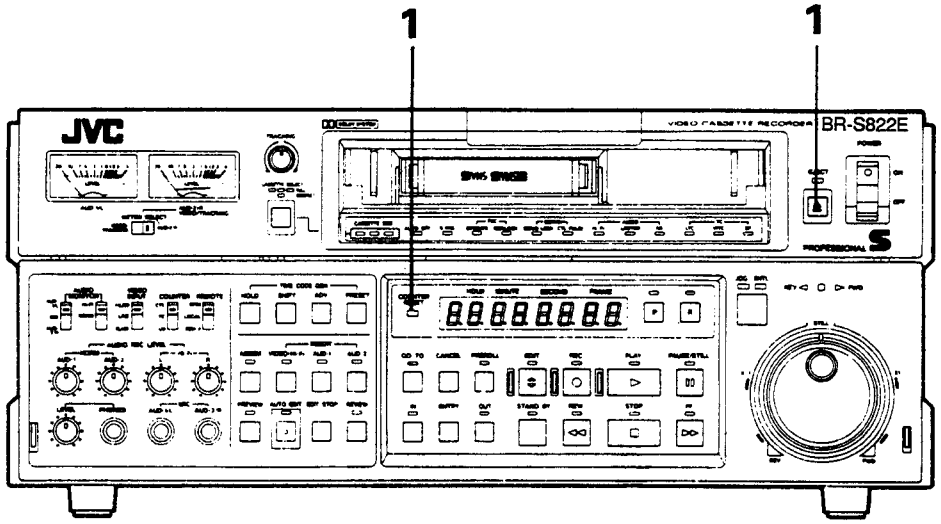
To initialize the memory switch as it was at shipment, proceed to do the following steps.

1. Eject the cassette tape and turn off the power switch.
2. Press the EJECT button and the COUNTER RESET button simultaneously while turning on the power switch. Again turn off the power switch after 5 or more seconds elapsed.
3. The memory switch is initialized as it was set at shipment.

1.4.2 Indication of ROM and microprocessor versions

The memory switch of this model has a function to display ROM and microprocessor versions.
The following table shows details of the display.

Memory SW No.	Board Name	Symbol No.	Version No. (X)
900	[4][0] SYSCON	IC2	PGD30620-2-X
901	[3][1] M. CTL & R. SERVO	IC1	PGD30241-10-XX
902	[4][2] OPERATION CPU	IC1	µPD78P214CW-0XX
903	[6][7] 45 PIN I/F	IC1	µPD75P116CW-2XX
	[5][5] RS-232C I/F	IC16	PGD30240-12-X
—	[4][1] AVM/OS	IC13	µPD75P116CW-3XX



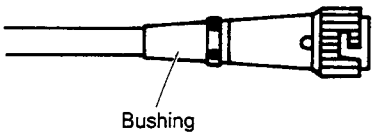
1. To preset the memory switch

1.5 7-PIN CABLE

There are two kinds of Y/C OUTPUT connectors provided for this model; namely, the Y/C443 OUTPUT and the Y/C924 or Y/C686 OUTPUT (for use of optional SA-E92E).
When this set is used as a playback machine, use any cable of the following.

	Part No.	Wiring diagram and Color of bushing	Main applicable models
Y/C443 output cable	VC-G10XX (optional) PGZ00793-006 (service part)	Diagram ② Blue	BR-S822/S622 BR-S811/S611 BR-S411 BR-S405 KR-M800/M820
	PGZ00752-01-01 (service part)	Diagram ① Red	
Y/C686 output cable Y/C924	PGZ00752-01-01 (service part)	Diagram ① Red	BR-S822/S622

Note: Do not use these cables for any set other than those specified above as applicable models. Otherwise characteristics of the set becomes different from the original.



● **Internal wiring of cable**

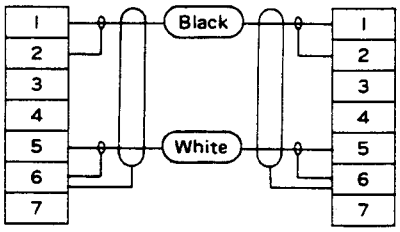
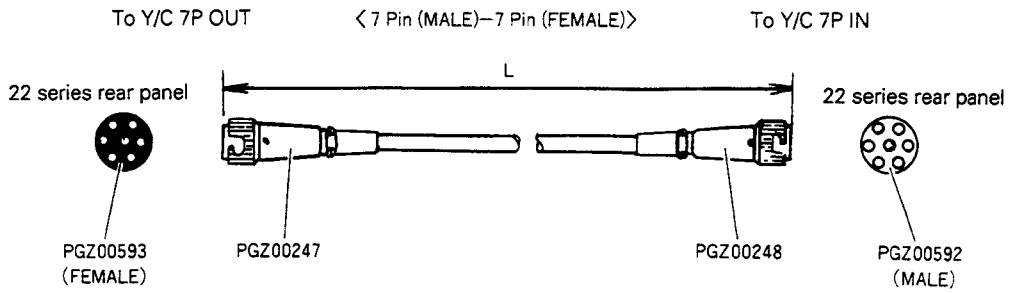
Diagram ②



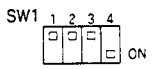


1.6 WHEN IN TROUBLE

1.6.1 To take cassette out of set manually

If a loaded tape cannot be ejected because of electrical failure, etc., take it out in the following manner.

1. Turn off the power and remove the top cover.
2. Open the operation panel and set the DIP switch SW1-4 on [3][1] M. CTL & R. SERVO board to ON.



3. Turn on the power, and the set enters the emergency roll mode.
4. Depress the tact switch SW2 on the M. CTL board while rotating the loading motor clockwise. The mechanism starts unloading while taking in the slack of the tape.
5. After the mechanism returns to the unloading end position, turn off the power and turn the gear of the cassette housing clockwise while taking out the cassette tape. If it is hard to turn the gear, remove the cassette panel and do the same.

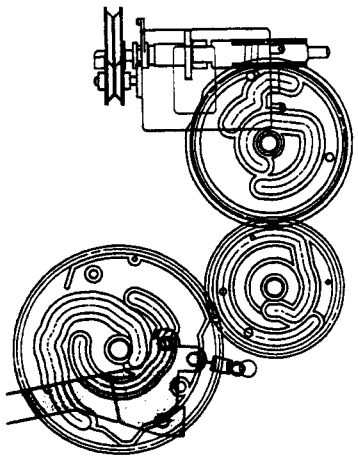


Fig. 1-6-1 F cassette unloading end position

1.6.2 Troubleshooting

1. Video system

Problem	Cause and Check
Abnormal operation of Auto EQ (No. 400, 401)	1. Is the same reference signal line selected for recording and playback ? (See 1.3 [1][7] Y COMB board.) 2. Are signal lines to record VITC and reference signal for Auto EQ separate from each other? (See 1.3 and Memory switches No. 400 and No.401.)
No picture appears.	Check the setting position of brush and its contact pressure. (See 2.3.3.)
No V. lock in TBC operation (No. 100)	Are REC switching point and PB switching point set the same? (For instance, recording was operated with 6.5H switching point but PB switching point is set to 1.25H.) Set PB switching point to be the same as REC switching point. (See Memory switch No. 100.)
Abnormal tint when the COMPONENT output is connected to MII VTR or β-cam VTR. (No. 104)	Check applicability of Memory switch No. 104 COMPONENT OUT LEVEL to the connected equipment.
Uncolored playback picture	Check if SW1 on [1][2] R/P COLOR board is wrongly set to "ADJ" position. (See 1.3.)
In TBC operation, playback picture is abnormal in the level and phase.	Check setting of the TBC operation section on the front sub panel.
Many dropouts	Check if S1 on [1][0] R/P Y board is wrongly set to "OFF". (See 1.3.)
Signals in blanking period are not recorded. (No. 400, 401, 601)	1. Are signal lines used separately for recording VITC and impressing reference signal for Auto EQ set by [1][7] Y COMB board ? (See 1.3 and Memory switches No. 400 and No. 401.) 2. Check if Memory switch No. 601 V. BLANK MASK is wrongly set to "ON" in TBC operation.
H. distortion at editing points (No. 100)	Check if Memory switch No. 001 AUTO H. PHASE is wrongly set to "OFF" ?
Inverted picture in S-VHS mode (No. 101)	Check S-VHS REC EQ. (See Memory switch No. 101.)

2. Audio system

Problem	Cause and Check
Hi-Fi audio signal is not recorded. (No. 200)	Check if Memory switch No. 200 Hi-Fi AUDIO REC is wrongly set to "OFF".
No audio output (No. 203)	Check setting of Memory switch No. 203 AUDIO OUT.
Normal audio CH-2 (AUD-2) signal is not recorded. (No. 206)	Check if Memory switch No. 206 AUD-2/LTC is wrongly set to "LTC".

3. Operation system

Problem	Cause and Check
Any operation command is not accepted.	1. Check if the REMOTE switch on the front panel is wrongly set to "LOCAL". 2. Check if the MENU SET switch on the front sub panel is wrongly set to "ON".
Slow Tape speed (x16 speed at maximum) (No. 319)	Check if Memory switch No. 319 TAPE MAX SPEED is wrongly set to "x16".
Recording is impossible with unlocked cassette tape (recording prevention tab is not yet broken).	Check if Memory switch No. 304 RECORDING INHIBIT is wrongly set to "ON".
Deck enters Playback mode as tape is rewound to the beginning of tape. (No. 311)	Check if Memory switch No. 311 MODE AT TAPE BEGIN is wrongly set to "PLAY".
Deck enters Recording mode as the power is turned on. (No. 305)	Check if Memory switch No. 305 REPEAT REC is wrongly set to "ENABLE".
Inoperative by remote control unit	1. Check setting of the REMOTE switch on the front panel. "9 PIN" : To use a 9-pin remote control unit "REM-2" : To use a 45-pin remote control unit (when optional SA-K28 connected) or an RS-232C remote control unit (when optional SA-K27 connected) 2. When RS-232C remote control unit is connected, check the conformity of every data rate.

4. Syscon system

Problem	Cause and Check
LTC is not recorded. (No. 206)	Check if Memory switch No. 206 AUD-2/LTC is wrongly set to "AUD-2".
VITC is not read or output. (No. 400, 401, 601)	1. Are signal lines used separately for recording VITC and for impressing reference signal for Auto EQ ? (See 1.3, 1 7 Y COMB and Memory switches No. 400 and No. 401.) 2. Check if Memory switch No. 601 V. BLANK MASK is wrongly set to "ON" in TBC operation.

5. Mechanism system

Problem	Cause and Check
Mechanism malfunctions.	Check that all switches of DIP SW1 on [3][1] M. CTL & R. SERVO board are set to "OFF". (See 1.3.)

1.6.3 Check of supply voltage

When trouble occurs in the power supply system, first check the primary fuse and fuse of [0][5] FUSE board if there is something blown out or not. Secondly, confirm that all of output voltages of the switching regulator meet the specifications. For voltage measurement, use CN1 on [0][5] FUSE board. (It is convenient to measure at test points of an extension board PGJ05044.)

Output	Connector of SW Regulator	Measuring Point (CN1, [0][5] FUSE)	Voltage (V)
−15 V	CN3-1 CN3-2 (GND)	CN1-24A CN1-23A	−15.0 ± 0.75
+15 V	CN4-1 CN4-2 (GND)	CN1-31A, 32A CN1-29A, 30A	+15.0 ± 0.75
+8 V	CN4-3 CN4-4 (GND)	CN1-27A, 28A CN1-25A, 26A	+8.0 ± 0.4
+12 V	CN5-1 CN5-2	CN1-22A CN1-21A	+12.5 ± 0.625
+18 V	CN5-3 CN5-4 (GND)	CN1-20A CN1-19A	+18.0 ± 0.9

1.7 PROTOCOL OF 9-PIN REMOTE CONNECTOR

In this section, the following is the contents of the remote control signal which is used for 9-pin connector of the PROFESSIONAL S22 series (We will call the 22 series in the followings.).

In this protocol, it is defined that the CONTROLLER means the equipment which controls a VTR, and the DEVICE means the equipment which is controlled.

EX 1. When two VTRs are connected (SWAP editing) , the RECORD VTR is called as a CONTROLLER, and PLAY VTR as a DEVICE.

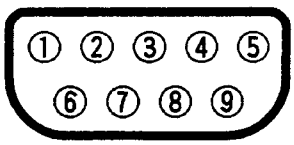
EX 2. When an editor is connected to a VTR, the editor is called as a CONTROLLER, and the VTR as a DEVICE.

1.7.1 SPECIFICATION OF 9-PIN CONNECTOR

Interface connector : 9-pin D-sub female

When two VTRs are connected, a pin arrangement of the RECORD VTR (only BR-S822E) changes the CONTROLLER. When the REMOTE switch of the front panel sets to the 9-PIN, a pin arrangement of the 9-pin connector changes the DEVICE. A pin arrangement of BR-S622E/522E becomes always the DEVICE.

Pin	CONTROLLER	DEVICE
1	Frame Ground	Frame Ground
2	Receive A	Transmit A
3	Transmit B	Receive B
4	Transmit Common	Receive Common
5	Spare	Spare
6	Receive Common	Transmit Common
7	Receive B	Transmit B
8	Transmit A	Receive A
9	Frame Ground	Frame Ground

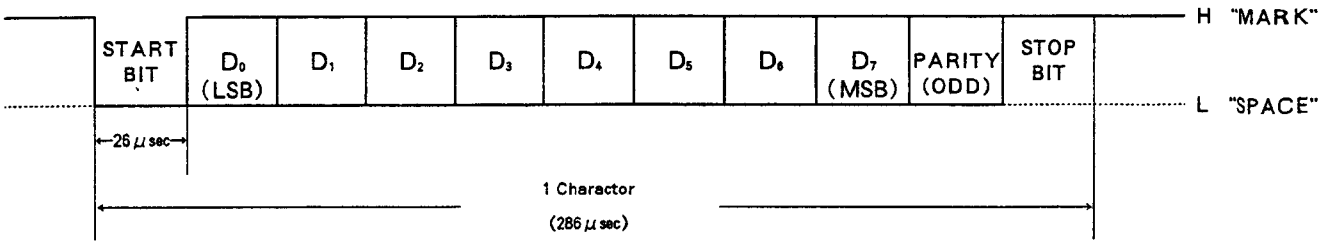


9-pin CONNECTOR

1.7.2 COMMUNICATION FORMAT

Format : EIA RS-422A
Mode : No synchronization
Character length : 1 Start bit + 8 Data bits + 1 Parity bit + 1 Stop bit
Data rate : 38400 bps
Parity : Odd parity $D_0 + D_1 + \cdots + D_7 + P$ = An odd number
Start bit : 1bit "SPACE"
Stop bit : 1bit "MARK"

• The composition of bits.



1.7.3 COMMAND FORMAT

All the data communications is composed of the CMD1/DATA COUNT, CMD2, DATA and CHECKSUM, and commands are transmitted in order from a LSB of the CMD1/DATA COUNT. When the DATA COUNT is zero, no data is transmitted, but when the DATA COUNT is not zero, a number of data which correspond with the value of DATA COUNT are inserted between the CMD2 and CHECKSUM.

1. COMMAND BLOCK FORMAT

The data communication between the CONTROLLER and the DEVICE is performed as follows.

CMD 1	DATA COUNT	CMD 2	DATA n (n=0~15)	CHECKSUM	→
MSD LSD ← 1 Byte →		← 1 Byte →	← n Byte →	← 1 Byte →	

2. CONTENTS OF COMMAND

CMD 1 : Indicates the value according to the function and direction of the command.

CMD1	FUNCTION	DIRECTION Controller Device
0	SYSTEM CONTROL	→
1	SYSTEM CONTROL RETURN	←
2	TRANSPORT CONTROL	→
4	PRESET & SELECT CONTROL	→
6	SENSE REQUEST	→
7	SENSE RETURN	←

DATA COUNT : Indicates the number of DATA bytes (0~15) where inserted between the CMD2 and CHECKSUM.

CMD 2 : Designates the particular command.

DATA : When the data is added to the COMMAND which is defined by the CMD1 and CMD2, DATA-1 to DATA-15 shows the value corresponding to their contents.

CHECKSUM : This is used for checking up on the data communication error, adds from the first byte of the COMMAND block to the last DATA byte, and indicates the least significant 8 bits.

EX. COMMAND "61 4C 84"

```
 LSB            MSB
   1 0 0 0  0 1 1 0  (=6 1)
   0 0 1 1  0 0 1 0  (=4 C)
+) 0 0 1 0  0 0 0 1  (=8 4)
   1 0 0 0  1 1 0 0  (=3 1)
   CHECKSUM "31"
```

1.7.4 COMMAND TABLE

In this table, each kind marks which are shown in a column of the DEVICE show as followings.

1) The COMMAND of "○" mark is applied in the model, if there is printed in the column of RETURN FROM DEVICE, the DEVICE will send back RETURN COMMAND with data, but there is no printed the DEVICE will send back "ACK:10.01".

2) The COMMAND of "△" mark, when the DEVICE receives the command, the DEVICE will send back "ACK:10.01", but does not put into the action.

3) The COMMAND of "×" mark is not applied, the DEVICE will send back "NAK undifined:11.12.01" with a data.

4) The COMMAND of "＊" mark, when the model as CONTROLLER can be sent to the DEVICE.

①COMMAND FROM CONTROLLER

• LOCAL DISABLE : 00.0C

When receiving this command, all operational functions of the DEVICE will be disabled.

• DEVICE TYPE REQUEST : 00.11

• DEVICE TYPE : 12.11

When the DEVICE receives the "DEVICE TYPE REQUEST : 00.11" command, the "DEVICE TYPE : 12.11" with 2 bytes data will be sent back to the CONTROLLER as a response.

MODEL	DATA-1	DATA-2
JVC SVHS-1	F1	1F
JVC SVHS-2	F1	0B
OTHER TYPE-1	11	00
OTHER TYPE-2	21	25

Data are changed in accordance with the setting of the memory switch which name is No.317 9-PIN DEVICE TYPE ID.

• LOCAL ENABLE : 00.1D

When receiving this command, the front panel operation of the DEVICE will be enabled in accordance with the settings of the memory switch. When the power of the DEVICE is turned on, it will be set to the LOCAL ENABLE state.

• ACK : 10.01

When receiving acknowledgment command, the DEVICE will send back this command.

• NAK : 11.12

When detecting the following errors, the DEVICE will send back this command as not-acknowledgment. Bit-7 to bit-0 of DATA-1 is set in accordance with the contents of the errors.

DATA-1

Bit-7	6	5	4	3	2	1	0
TIME OUT	FRAMING ERROR	OVERRUN ERROR	PARITY ERROR		CHECKSUM ERROR		UNDEFINED COMMAND

• STOP : 20.00

• PLAY : 20.01

• REC : 20.02

• STANDBY OFF : 20.04

• STANDBY ON : 20.05

• FAST FWD : 20.10

• REWIND : 20.20

These commands are used for setting of the DEVICE to the specified mode. The "STANDBY OFF : 20.04" command is available only in the STOP mode.

• JOG FWD : 2X.11

• VAR FWD : 2X.12

• SHUTTLE FWD : 2X.13

• JOG REV : 2X.21

• VAR REV : 2X.22

• SHUTTLE REV : 2X.23

When receiving one of the above commands, the DEVICE will start running in accordance with speed data. When only DATA-1 is given, the tape speed will be defined as follows.

TAPE SPEED = $10^{(N/32-2)}$ N : SPEED DATA OF DATA-1 (DECIMAL)

When both DATA-1 and DATA-2 are given, the tape speed is more precise value than the tape speed defined by DATA-1, the tape speed will be defined as follows.

TAPE SPEED = $10^{(N/32-2)} + N'/256 \{10^{(N+1/32-2)} - 10^{(N-32-2)}\}$ N : SPEED DATA OF DATA-1

N ' : SPEED DATA OF DATA-2

• PRE ROLL : 20.30

This command is used for cueing up the DEVICE to the point as follows.

IN POINT − PRE ROLL TIME

• CUE UP WITH DATA : 24.31

This command is used for cueing up the DEVICE to the point defined by DATA-1 to DATA-4.

DATA-1		DATA-2		DATA-3		DATA-4	
10 Frame	1 Frame	10 Second	1 Second	10 Minute	1 Minute	10 Hour	1 Hour
MSD	LSD	MSD	LSD	MSD	LSD	MSD	LSD

Refer to ③TIME DATA FORMAT.

• SYNC PLAY : 20.34

This command is used for setting the DEVICE to the PLAY mode while the phase modification is controlled. When the tape position of the DEVICE is near the PRE ROLL POINT, the DEVICE will execute the SYNC PLAY mode as the tape position is the PRE ROLL POINT.

• PROGRAM PLAY + : 21.38

• PROGRAM PLAY − : 21.39

This commands are used for setting the DEVICE into the play back mode accordance with the DATA-1 as a speed data. At this time range of speed data is −25.5% to +25.5% by 0.1% step.

TAPE SPEED= (×1 PLAY SPEED) ×0.1×SPEED DATA (DECIMAL) SPEED DATA : 00H to FFH

• PREVIEW : 20.40

• REVIEW : 20.41

• AUTO EDIT : 20.42

These commands are used for setting the DEVICE to above specified modes.

• TENSION RELEASE : 20.52

When receiving this command, the DEVICE becomes TENSION RELEASE mode in the state of STOP or STILL in SHUTTLE/JOG/VAR mode.

• ANTI-CLOG TIMER DISABLE : 20.54

• ANTI-CLOG TIMER ENABLE : 20.55

These command are used for selecting DISABLE/ENABLE of the ANTI-CLOG TIMER. When the power of the DEVICE is turned on, it will be set to the ANTI-CLOG TIMER ENABLE.

• FULL EE OFF : 20.60

• FULL EE ON : 20.61

These commands are used for setting or clearing all channels to EE mode.

• SELECT EE ON : 20.63

This command is used for setting each EDIT PRESET channel assigned by the DATA-1 of the "EDIT PRESET : 41.30" command to the EE mode. To clear the EE mode, use the "EDIT OFF : 20.64" command.

• EDIT OFF : 20.64

This command is used for clearing the EDIT mode and also clearing the SELECT EE mode.

• EDIT ON : 20.65

This command is used for setting the DEVICE, which is running at the normal PLAY speed during the EDIT PRESET mode, to the EDIT mode.

• TIMER-1 PRESET : 44.00

This command is used for presetting the value, which has been given by the DATA-1 to DATA-4, to the CTL COUNTER of the DEVICE. As for the data format, refer to "CUE UP WITH DATA : 24.31" command.

• TIME CODE PRESET : 44.04

This command is used for presetting the value, which has been given by the DATA-1 to DATA-4, to the TIME CODE of the time code generator. As for the data format, refer to "CUE UP WITH DATA : 24.31" command.

• U-BIT PRESET : 44.05

This command is used for presetting the value, which has been given by the DATA-1 to DATA-4 as follows, to the USER BIT of the time code generator.

DATA-1		DATA-2		DATA-3		DATA-4	
2nd BINARY GROUP	1st BINARY GROUP	4th BINARY GROUP	3rd BINARY GROUP	6th BINARY GROUP	5th BINARY GROUP	8th BINARY GROUP	7th BINARY GROUP
MSD	LSD	MSD	LSD	MSD	LSD	MSD	LSD

• TIMER-1 RESET : 40.08

This command is used for resetting the CTL COUNTER to zero.

• IN ENTRY : 40.10

• OUT ENTRY : 40.11

These commands are used for storing the value which is displayed on the DEVICE into the IN ENTRY or OUT ENTRY memory as an IN POINT or OUT POINT data.

• IN PRESET : 44.14

• OUT PRESET : 44.15

These commands are used for presetting the value, which has been given by the DATA-1 to DATA-4, into the IN ENTRY or OUT ENTRY memory. As for the data format, refer to "CUE UP WITH DATA : 24.31" command.

• IN SHIFT + : 40.18

• IN SHIFT − : 40.19

These commands are used for adding or subtracting the value of an IN POINT data, by one frame.

• OUT SHIFT + : 40.1A

• OUT SHIFT − : 40.1B

These commands are used for adding or subtracting the value of an OUT POINT data, by one frame.

• IN RESET : 40.20
• OUT RESET : 40.21
These commands are used for resetting the value of an IN POINT or an OUT POINT data, which has been stored.

• IN RECALL : 40.24
• OUT RECALL : 40.25
These commands are used for recalling the value, which has been resetting by the "IN RESET : 40.20" or "OUT RESET : 40.21" command, as an IN POINT or an OUT POINT data.

• EDIT PRESET : 41.30
Each bit in the DATA-1 is defined as follows.

DATA-1

Bit-7	6	5	4	3	2	1	0
	INSERT	ASSEMBLE	VIDEO		TIME CODE	AUD-2	AUD-1

INSERT or ASSEMBLE mode is defined by the bit-6 and 5, and each channel is defined by Bit-4 to Bit-0.

• PRE ROLL TIME PRESET : 44.31
These commands are used for presetting the pre roll time, which has given by the DATA-1 to DATA-4, to the DEVICE. As for the data format, refer to "CUE UP WITH DATA : 24.31" command.

• TAPE/AUTO SELECT : 41.33
The TAPE/EE mode is selected by the state of the DATA-1 as follows.

DATA-1
00 : AUTO (TAPE/EE)
01 : TAPE
FF : It depends on the setting of the DEVICE.

• SERVO REFERENCE SELECT : 41.33
The SERVO reference signal is selected by the state of the DATA-1 as follows.

DATA-1
00 : AUTO
01 : EXTERNAL
FF : It depends on the setting of the DEVICE.

• HEAD SELECT : 41.34 (Except for 22 series)
The heads used in the PLAY mode are selected by the state of the DATA-1 as follows.

DATA-1
00 : R/P HEAD
01 : PLAY HEAD
FF : It depends on the setting of the DEVICE.

• COLOR FRAME SELECT : 41.35 (Except for 22 series)

The color frame mode of the servo system is selected by the state of the DATA-1 as follows.

DATA-1

00 : 2 Field

01 : 4 Field

FF : It depends on the setting of the DEVICE.

• TIMER MODE SELECT : 41.36

This command is used for selecting the TIMER system by the state of the DATA-1 as follows.

DATA-1

00 : TIME CODE

01 : CTL COUNTER

FF : It depends on the setting of the DEVICE.

• INPUT CHECK : 41.37

When the DATA-1 is "01", the VIDEO and AUDIO system of the DEVICE will be become to EE mode.

• AUTO MODE OFF : 40.40 (Except for 22 series)

• AUTO MODE ON : 40.41 (Except for 22 series)

This command is used for switching ON/OFF the AUTO mode of the DEVICE.

• VIDEO REFERENCE DISABLE OFF : 40.48

• VIDEO REFERENCE DISABLE ON : 40.49

In the state of PLAY or EE mode of the DEVICE, this command is used for switching ON/OFF the EXTERNAL REFERENCE mode as a SERVO REFERENCE. When the power of the DEVICE is turned on, it will be set to the VIDEO REFERENCE DISABLE OFF.

• TC GEN DATA SENSE : 61.0A

This command is used for requesting the TIME CODE data that the DEVICE is generating, and it will make a response according to the contents of the DATA-1.

DATA-1

Bit-7	6	5	4	3	2	1	0
...	...	...	GEN UB	...	...	...	GEN TC

DATA-1=01 : Request for GEN TC → "GEN TIME DATA : 74.08" Respond

DATA-1=10 : Request for GEN UB → "GEN UB DATA : 74.09" Respond

DATA-1=11 : Request for GEN TC & UB → "GEN TC & UB DATA : 78.08" Respond

• CURRENT TIME SENSE : 61.0C

This command is used for requesting the TIME DATA or USER BIT, and the DEVICE will make a response according to the contents of DATA-1.

DATA-1

Bit-7	6	5	4	3	2	1	0
···	···	VITC UB	LTC UB	···	CTL COUNTER	VITC TIME	LTC TIME
M S D				L S D			

Request command / DATA-1 / Response command	01	02	03	04	10	20	30	11	22	33
74.00 : CTL COUNTER DATA				○						
74.04 : LTC TIME DATA	○		○							
74.14 : LTC INTERPOLATED TIME DATA	○		○							
74.05 : LTC U-BIT DATA					○		○			
78.04 : LTC TIME & U-BIT DATA								○		○
78.14 : LTC INTERPOLATED TIME & U-BIT DATA								○		○
74.06 : VITC TIME DATA		○	○							
74.16 : VITC INTERPOLATED TIME DATA		○	○							
74.07 : VITC U-BIT DATA						○	○			
78.06 : VITC TIME & U-BIT DATA									○	○
78.16 : VITC INTERPOLATED TIME & U-BIT DATA									○	○

• IN DATA SENSE : 60.10

• OUT DATA SENSE : 60.11

These commands are used for requesting the IN ENTRY DATA or OUT ENTRY DATA, and the DEVICE will make a response according to the contents of DATA-1. As for the data format, refer to "CUE UP WITH DATA : 24.31" command.

• STATUS SENSE : 61.20

This command is used for requesting the status of the DEVICE, and the DEVICE will send back a response command "STATUS DATA : 7X.20" according to the contents of DATA-1 of the CONTROLLER.

MSD (Bit7~4) : Indicates the initial DATA No. of the "7X.20 : STATUS DATA" to be sent back.

LSD (Bit3~0) : Indicates the number of data bytes in "7X.20 : STATUS DATA" to be sent back.

EX. When the DATA-1 is "33".

The DEVICE will send back three bytes from the DATA No.3, i.e. DATA No.3 to DATA No.5 of the "7X.20 : STATUS DATA".

BR-S822E/622E/522E STATUS DATA

BIT / DATA	BIT-7	BIT-6	BIT-5	BIT-4	BIT-3	BIT-2	BIT-1	BIT-0
DATA-0			CASSETTE OUT			HARD ERROR		LOCAL

DATA-7				SYNC ACTIVE				IN~OUT STATUS
DATA-8			NEAR END OF TAPE	END OF TAPE				REC INHIBIT
∫								
DATA-F								

Note *1) This bit does not set to "1" in BR-S622E/522E.
*2) This bit does not set to "1" in BR-S522E.

①DATA-0

• BIT-2 : HARD ERROR

This bit will be set to "1" when tape path system errors occur in the DEVICE.

• BIT-0 : LOCAL

This bit will be set to "1" when the REMOTE switch on the front panel is set to "local".

②DATA-1

• BIT-1 : REC

This bit will be set to "1" when the DEVICE goes into the REC mode, also the "DATA-4/BIT-4 : EDIT" is set to "1".

• BIT-0 : PLAY
This bit will be set to "1" when the DEVICE goes into the PLAY, REC or EDIT mode, also the DEVICE is in the CAPSTAN OVERRIDE mode.

③DATA-2
• BIT-6 : TSO MODE
This bit will be set to "1" when the DEVICE is in the CAPSTAN OVERRIDE mode.

• BIT-3 : VAR
This bit will be set to "1" when the DEVICE is in the VAR or CAPSTAN OVERRIDE mode.

• BIT-2 : TAPE DIRECTION
This bit shows the tape direction of the DEVICE in the STILL or STOP mode.
0 = FWD
1 = REV

• BIT-1 : STILL
This bit will be set to "1" when the DEVICE is in the STOP or STILL of SHUTTLE/JOG/VAR mode.

• BIT-0 : CUE UP COMPLETE
This bit will be set to "1" when the DEVICE receives the PRE ROLL or CUE UP WITH DATA command and then cue-up operation is completed, and it will be set to "0" as soon as the tape starts running.

④DATA-4
• BIT-4 : EDIT
This bit will be set to "1" when the DEVICE is in the EDIT mode, and at the same time, the "DATA-1/BIT-1 : REC" is also set to "1".

• BIT-3 : PREVIEW
This bit will be set to "1" when the DEVICE is in the PREVIEW mode.

• BIT-2 : AUTO EDIT
This bit will be set to "1" when the DEVICE is in the AUTO EDIT mode.

• BIT-1 : REVIEW
This bit will be set to "1" when the DEVICE is in the REVIEW mode.

• BIT-0 : PRE ROLL OR CUE UP
This bit will be set to "1" when the DEVICE goes into the PRE ROLL and CUE-UP modes, also the PRE ROLL is performed in the AUTO EDIT or PREVIEW mode.

⑤DATA-6
• BIT-6, 5, 4 : LAMP STILL, LAMP FWD, LAMP REV
When the DEVICE receives the SEARCH command, the corresponding bit of DATA-6 will be set to "1" according to the direction of the SEARCH command.

⑥DATA-7
• BIT-0 : IN—OUT STATUS
This bit will be set to "1" when the DEVICE is in the PREVIEW or AUTO EDIT mode and the tape is running between the IN POINT and OUT POINT.

• COMMAND SPEED SENSE : 60.2E

This command is used for requesting the tape speed which is been running of the DEVICE, and the DEVICE is send back the "COMMAND SPEED DATA : 71.2E" command with a data.

• TIMER MODE SENSE : 60.36

This command is used for requesting the TIMER mode of the DEVICE. When the DEVICE receives this command, it will send back the "TIMER MODE STATUS : 71.36" with DATA-1 as shown below.

"TIMER MODE STATUS : 71.36" DATA-1 : 00 ··· TIME CODE
01 ··· CTL COUNTER

②RETURN FROM DEVICE

• GEN TC DATA : 74.08

This command is sent back to the CONTROLLER with the TIME data of the TC which the DEVICE is generating. For the data format, refer to the "CUE UP WITH DATA : 24.31".

• GEN UB DATA : 74.09

This command is sent back to the CONTROLLER with the UB data of the TC which the DEVICE is generating. For the data format, refer to the "U-BIT PRESET : 44.05".

• GEN TC & UB DATA : 78.08

This command is sent back to the CONTROLLER with the TIME data and UB data of the TC which the DEVICE is generating that are added to DATA-1 to DATA-4 as a TIME data and DATA-5 to DATA-8 as a UB data. For the data format, refer to the "CUE UP WITH DATA : 24.31" and "U-BIT PRESET : 44.05".

• IN DATA : 74.10

This command is sent back to the CONTROLLER with the IN POINT DATA. For the data format, refer to the "CUE UP WITH DATA : 24.31".

• OUT DATA : 74.11

This command is sent back to the CONTROLLER with the OUT POINT DATA. For the data format, refer to the "CUE UP WITH DATA : 24.31".

• LTC INTERPOLATED TIME DATA : 74.14

When the LTC TIME DATA of the DEVICE is requested, if the data of LTC played back by the DEVICE is corrected by the CTL either or it is read incorrectly, this command will be sent back to the CONTROLLER with the LTC TIME DATA. For the data format, refer to the "CUE UP WITH DATA : 24.31".

• TIMER MODE DATA : 71.36

Refer to the "TIMER MODE SENSE : 60.36" command.

• TIMER-1 DATA : 74.00

This command is sent back to the CONTROLLER with the CTL COUNTER DATA. At this time, the BIT-6 of DATA-1 is set to "1" ("0") when the CTL COUNTER of the DEVICE is set to DF (NDF) mode. For the data format, refer to the "CUE UP WITH DATA : 24.31".

• LTC TIME DATA : 74.04

When the LTC TIME DATA of the DEVICE is requested, if the data of LTC is read correctly and this command is sent back to the CONTROLLER with four data. For the data format, refer to the "CUE UP WITH DATA : 24.31".

• LTC TIME & UB DATA : 78.04
This command is sent back to the CONTROLLER with data which are added to DATA-1 to DATA-4 as a LTC TIME DATA and DATA-5 to DATA-8 as a LTC UB DATA. For the data format, refer to the "CUE UP WITH DATA : 24.31" and "U-BIT PRESET : 44.05".

• LTC UB DATA : 74.05
This command is sent back to the CONTROLLER with the LTC UB DATA. For the data format, refer to the "U-BIT PRESET : 44.05".

• LTC INTERPOLATED TIME & UB DATA : 78.14
When the LTC TIME DATA and UB DATA of the DEVICE is requested, if the data of LTC played back by the DEVICE is corrected by the CTL either or it is read incorrectly, this command will be sent back to the CONTROLLER with data which are added to DATA-1 to DATA-4 as a LTC TIME DATA and DATA-5 to DATA-8 as a LTC UB DATA. For the data format, refer to the "CUE UP WITH DATA : 24.31" and "U-BIT PRESET : 4 4.05".

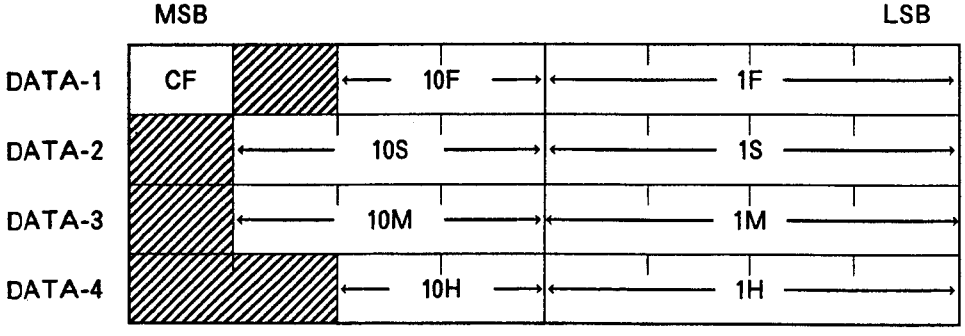
• VITC TIME DATA : 74.06
This command is sent back to the CONTROLLER with the VITC TIME DATA. For the data format, refer to the "CUE UP WITH DATA : 24.31".

• VITC TIME & UB DATA : 78.06
This command is sent back to the CONTROLLER with data which are added to DATA-1 to DATA-4 as a VITC TIME DATA and DATA-5 to DATA-8 as a VITC UB DATA. For the data format, refer to the "CUE UP WITH DATA : 24.31" and "U-BIT PRESET : 44.05".

• VITC HOLD TIME DATA : 74.16
When the VITC TIME DATA of the DEVICE is requested if it will be read incorrectly, this command will be sent back to the CONTROLLER with the VITC TIME DATA. For the data format, refer to the "CUE UP WITH DATA : 24.31".

• VITC HOLD TIME & UB DATA : 78:16
When the VITC TIME DATA and VITC UB DATA of the DEVICE are requested if they will be read incorrectly, this command will be sent back to the CONTROLLER with data which are added to DATA-1 to DATA-4 as a VITC TIME DATA and DATA-5 to DATA-8 as a VITC UB DATA. For the data format, refer to the "CUE UP WITH DATA : 24.31" and "U-BIT PRESET : 44.05".

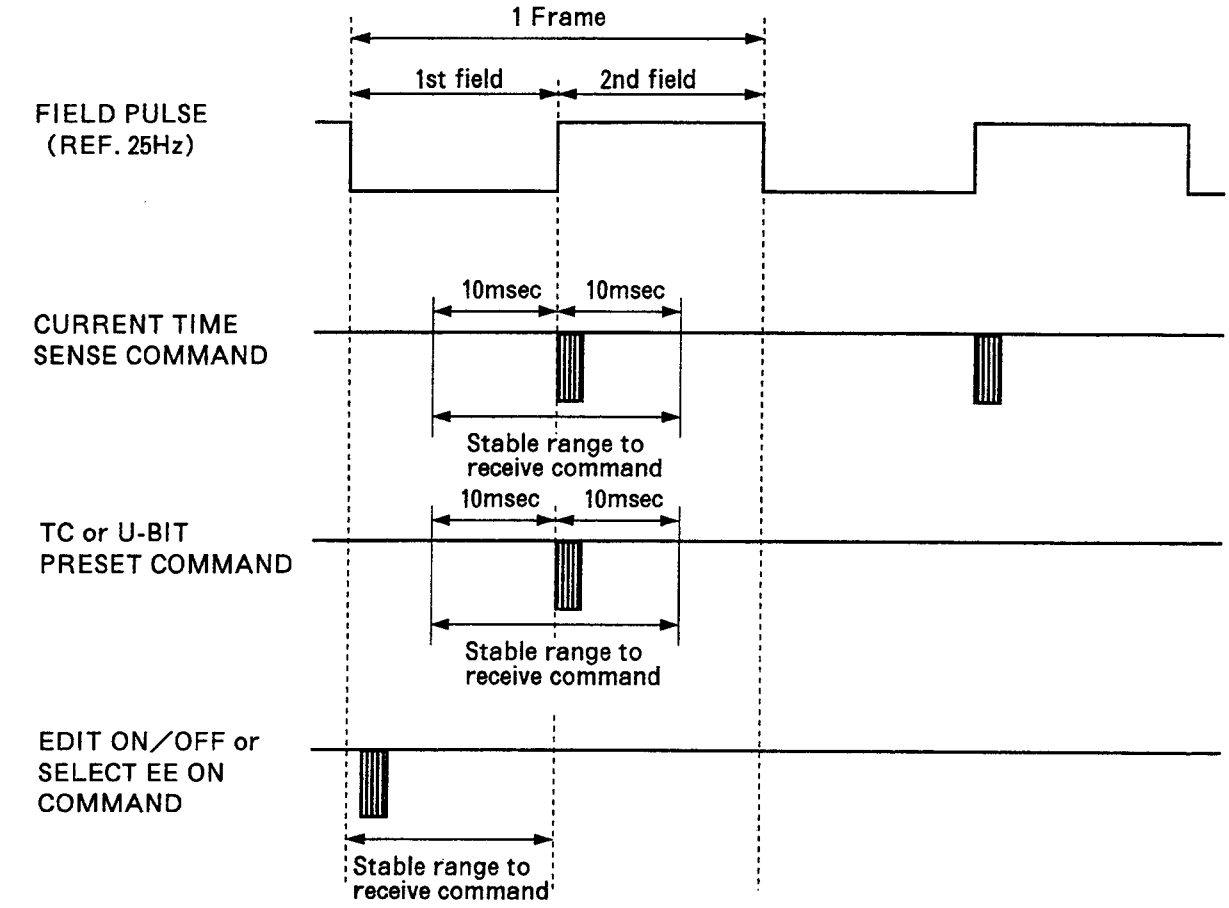
③FORMAT OF TIME DATA
The format of the TIME DATA is used by the "CUE UP DATA : 24.31" command etc. show as follows.

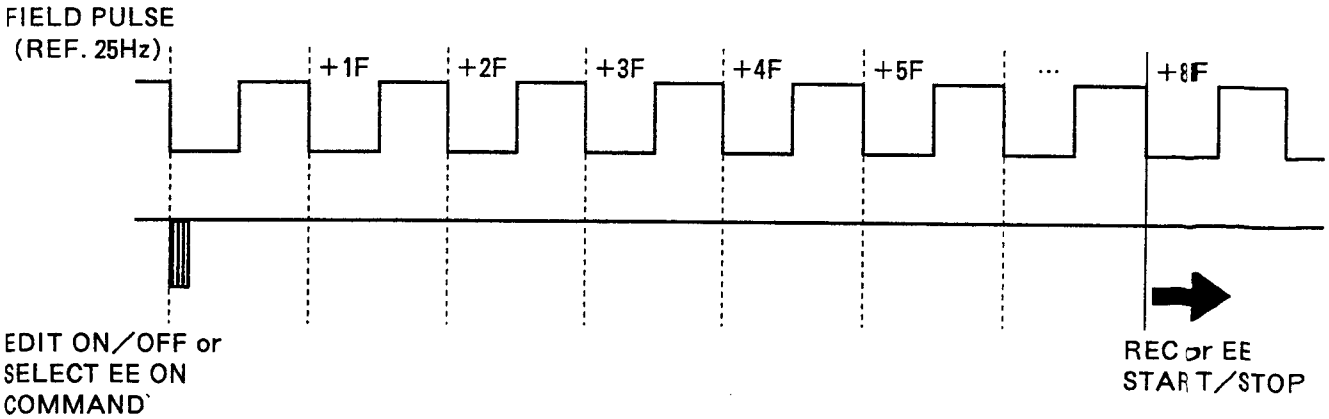


1. DATA-1/BIT-7 : CF FLAG ("1"CF ON, "0"CF OFF)
When the DEVICE receives the "CURRENT TIME SENSE : 61.0C" command, if the DEVICE has been set to the CF mode and it will be set to "1".

2. The BIT of ▨ mark has no meaning as a TIME DATA.

1.7.5 DETAIL TIMING CHART





1.8 WIDE ASPECT ID

1.8.1 Necessity of wide aspect ID

Signal such as D2-MAC whose aspect ratio is 16 : 9 can be recorded by ordinary VTR if it is converted to PAL signal by decoder. To play back a tape on which such converted signal is recorded, the recorded signal must be expanded by TV set to reproduce picture in the aspect ratio of 16 : 9. For this operation, TV set is required to switch the aspect ratio corresponding to reception signal, however, WIDE ASPECT ID signal solves this problem because it enables TV set to switch switches the aspect ratio automatically.
The 22 series VTR has the function to record and play back WIDE ASPECT ID signal. If it is used in combination with TV set capable of discriminating WIDE ASPECT ID signal, it is also capable of automatic switching between 16 : 9 wide aspect picture and 4 : 3 ordinary aspect picture.

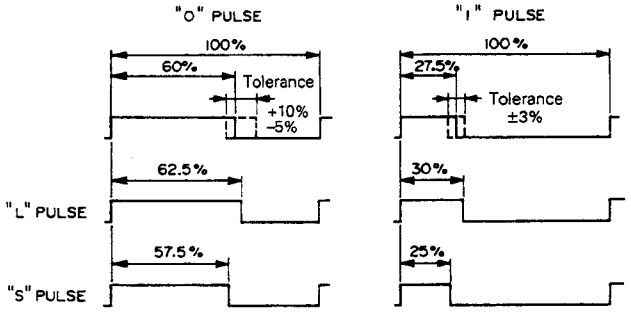


Fig. 1-8-1 Duty ratio of CTL pulse

1.8.2 Wide aspect ID

Wide aspect ID is recorded on the CTL track by CTL coding. However, in the VHS format which uses CTL codes for VISS and VASS systems, a particular method compatible with these systems is adopted for discriminating the wide aspect as mentioned below.
For VISS and VASS, "1" and "0" pulses are defined by modulating CTL pulse width in wide deviation as shown in Fig. 1-8-1. For wide aspect ID, additional modulation of these pulses in narrow deviation takes place within the tolerance to define "L" and "S" pulses, too. When "L" and "S" pulses are alternately recorded every two frames, it indicates the wide aspect ratio of 16 : 9.

Fig. 1-8-2 Wide aspect ID

1.9 ADJUSTMENT MODE

To set to the Adjustment Mode, depress the COUNTER RESET button, the FF button and the REW button while pressing the POWER switch to ON. The counter displays "····· 88 ·····" and the set enters the "Adjustment Mode 0".
To select an adjustment mode, turn the JOG dial to change the mode. Turning off the power cancels the adjustment mode.
Kinds of the adjustment modes with details are shown in the following table.

Adjustment Mode	Counter Display	Description	Adjustment Item
1	····· 0 1 ·····	Normal Audio CH-1 is set to REC mode.	Not used in the adjustment procedures.
2	····· 0 2 ·····	Normal Audio CH-2 is set to REC mode.	
3	····· 0 3 ·····	Both channels of Normal Audio are set to REC mode.	
4	····· 0 4 ·····	Tracking VR function is cancelled.	Used for X value adjustment (2.6.5)
5	····· 0 5 ·····	Drum and capstan rotate.	Not used in the adjustment.
6	····· 0 6 ·····	Enters to RAP mode.	Used for video circuit adjustment. (3.4)
7	····· 0 7 ·····	CTL signal is recorded.	Not used in the adjustment.
8	····· 0 8 ·····	Not used	
⟆	⟆		
2 4	····· 2 4 ·····		

SECTION 2
MECHANISM ADJUSTMENT

2.1 GENERAL DESCRIPTION

2.1.1 Precautions

1. Before use of a soldering iron, make sure to disconnect the power cord of the set from the outlet.
2. Do not pull connector cables strongly for disconnecting connectors.
3. Do not disturbe VRs and other adjusting parts with a trouble of unknown origin.
4. When inserting a cassette tape into the set, place the set correctly horizontally. Under the circumstances that the set is laid on its side or its rear, or upside down, insertion of a cassette may damage the cassette housing.

2.1.2 Mechanism operation check

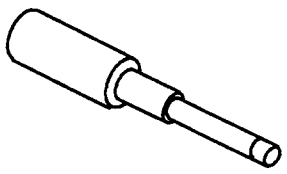
For operating the mechanism with the cassette housing removed, proceed to do the following steps.

1. Disconnect the power cord of the set from the outlet.
2. Remove the cassette housing from the set and disconnect the connector CN1 of the CASSETTE HOUSING board.
3. Shortcircuit pin 3 and pin 5 of the connector cable with each other.
4. Set a cassette tape with its door open on the main deck and turn on the power while selecting an operation mode with operation buttons.

2.1.3 Jigs and special tools for mechanism adjustment

The following jigs and special tools are necessary for adjusting the mechanism.

Alignment tapes MHPE, MBPE-2, MBAE, MBAE-3, MBPE-X	Cassette torque meter PUJ42881/PUJ42881B	Parallel check plate PGJ04035 (0.05)/ PUJ50204 (0.1)	Height gauge PGJ04032
			Taper nut driver PUJ50637	Tension pole mechanism positioning jig PGJ04031	Microchecker PUJ49712-2	Hex. driver PGJ04034 (2 mm)
			Line head wrench PGJ04033	Guide arm height adjustment driver PGJ04036		
			



● General tools required besides above special tools

- Nut driver (7 mm)
- Hex. keys (1.27 mm, 2 mm)
- Ordinary (+) screwdrivers [PGJ04037(3 mm), PGJ04038(2.6 mm)]
- Spacer (0.1 mm)

Table 2-1-1

2.2 PERIODIC REPLACEMENT OF MAIN PARTS

Periodic inspection and maintenance are needed in order to ensure the original performance and reliability of the set. The following table shows just standard periods according to general and average use. In actual, each period will widely differ from the standard depending on environmental and usage conditions.

If inspection and maintenance work of the following items are improperly performed, it not only shortens the service period and the life of the parts but also gives bad influence on the set as a whole. Also be aware that rubber parts may deform and age even when the set is new and not used for a long time. The service life of the upper drum is particularly affected by environmental and usage conditions.

System	No.	Part Name	Part Number	Standard service period* (operation housrs)				Ref. Sect.	Remark
				1000	2000	3000	4000		
Tape transport system	①	Supply guide shaft	—	★	★	★	★	—

* Know the standard service time by the drum's hour meter. For the capstan motor and the reel motor, perform service according to respective hour meters.

★ : Cleaning
○ : Check and Replace if necessary, or Check and Clean.
● : Replacement

2.2.1 Location of main parts

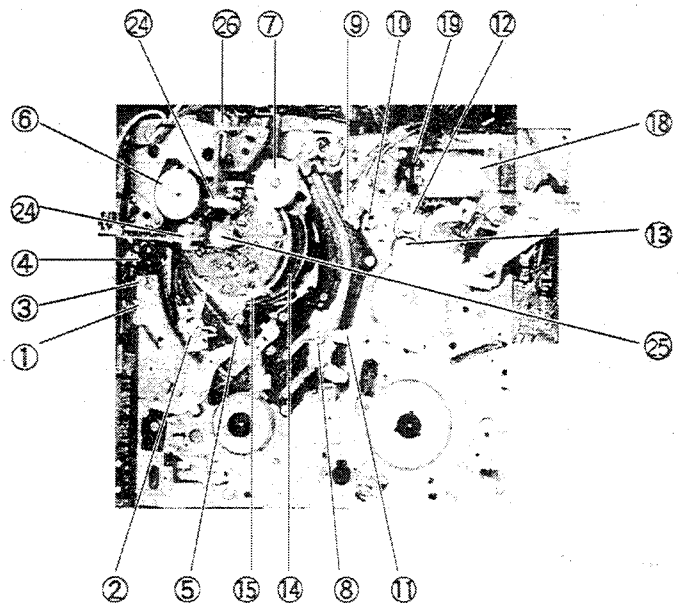

Fig. 2-2-1

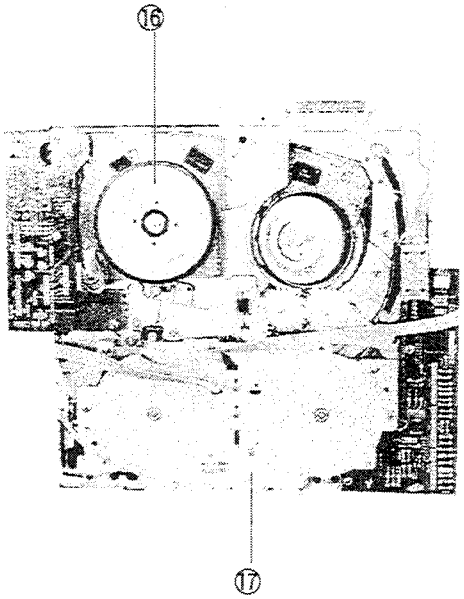

Fig. 2-2-2

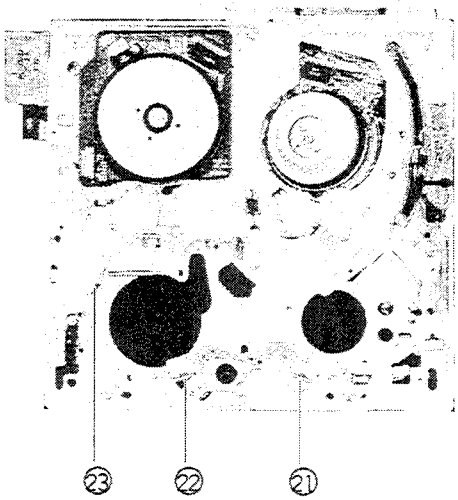

Fig. 2-2-3 (Reel motor is removed.)

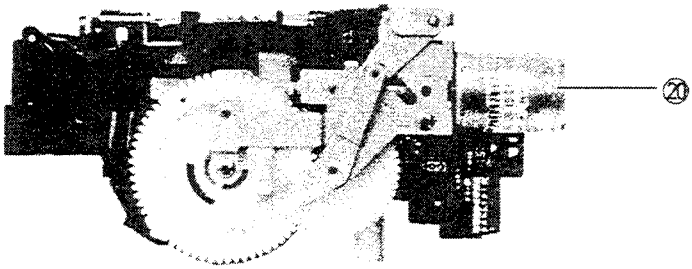

Fig. 2-2-4

2.2.2 Cleaning

Although periodical cleaning of the tape transport system is required, it is almost impossible to put it into practice. Therefore, it is strongly recommended to clean the tape transport system when a set is brought in for repair, etc.
For cleaning, use fine wooven cotton cloth moistened with ethyl alcohol.

1. Dirty video head causes rough playback picture and non picture reproduction in the extreme case.
   For cleaning video heads, lightly press the cloth to the upper drum by finger while turning the upper drum.
   Note: Since the video head is weak against vertical force (applied in up-down direction), movement of cloth may possibly damage it.
2. Dirty tape guide not only increases video heads in getting dirty much more but also damages tapes.
3. Dirty and dusty brush causes snow noise in playback picture.
   For cleaning the brush show as follows.
   Note: It is not necessary to clean up the slip ring.
   ① Remove the brush assemblies (A) and (B). (Refer to section 2.3.3.)
   ② Clip the brush, use fine wooven cotton cloth moistend with ethyl alcohol.
   ③ Pull out the brush from cloth movement of cloth may possible damage brush.
   ④ After cleaning the brush, reassemble the brush assemblies (A) and (B) refering to the section 2.3.3.

2.2.3 Oiling and greasing

Periodical oiling and greasing are not required, but new parts need them when they replace old ones. If oil or grease on the other party is old, wipe it off and apply new oil or grease.

1. Oil and grease used in this set are as follows.

Item	Name	JVC Part No.
Oil	Cosmo Hydro HV56	COSMO-HV56
– General spindle oil (low viscosity) is substitutable –		
Grease	Moriton Grease (Black)	MOS2-C
	Fuloil G-31KAV (Light Blue)	KANTO-G31KAV

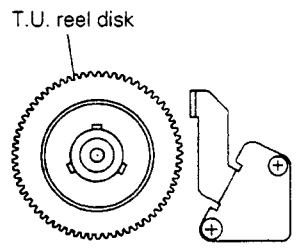
2. Grease the control cam every 2000 hours of operation.
3. For other parts, apply grease to them every 4000 hours of operation or on parts replacement.

2.3 REPLACEMENT OF MAIN PARTS

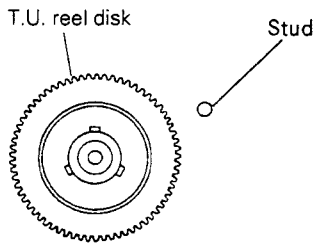
Note: For parts replacement, remove external covers, P. C. boards, cassette housing, etc. as required.

No.	Item	Adjustment and Check
1	**Cassette housing assembly** With change of the installation method of the cassette housing in the middle of production of this set, the mechanism assembly and the cassette housing assembly have been altered partially since then. Under those circumstances, the cassette housing assembly of the old type cannot be installed to the new mechanism assembly, however, the new cassette housing assembly can be installed to the old mechanism assembly. The following table shows respective models' serial numbers from which the new mechanism assembly is installed. • Difference to distinguish between old and new mechanism assemblies:	
1-1	**In case of Old mechanism assembly**	1) Remove the cassette panel ass'y (see 1.1.2). 2) Remove the cassette housing cover. 3) Remove two screws ③. 4) Insert a cassette tape and push it in just before the cassette holder goes down (see Fig. 2-3-2). Then, take out the cassette tape in that condition. 5) Remove two screws ② and two screws ①. 6) Raise the cassette housing and disconnect the housing connector while removing the cassette housing.

Model	BR-S822E	BR-S622E
Serial No.	#825 and after	#918 and after



Old mechanism



New mechanism

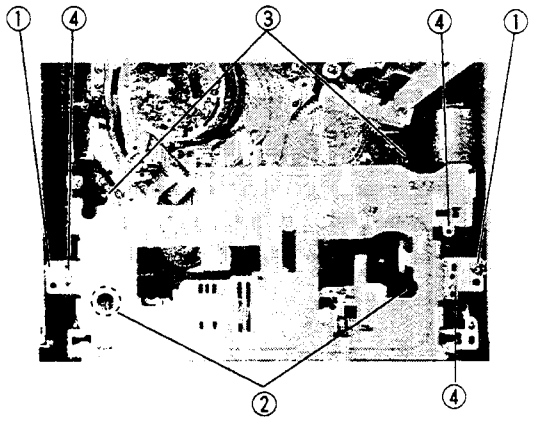


Fig. 2-3-1 (Housing cover is removed)

Screw ①	Screws ②, ③
7–9 kg-cm	② Brass color ③ Black 2.5–4 kg-cm

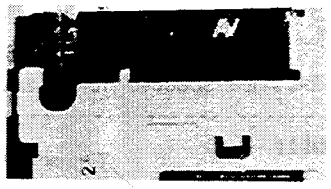

Fig. 2-3-2

No.	Item	Adjustment and Check
1-2	**In case of New mechanism assembly**  **Fig. 2-3-3** (Housing cover is removed) Screw ① / Screws ②, ③ ② Brass color ③ Black  7–9 kg-cm / 2.5–4 kg-cm	1) Remove the cassette panel ass'y (see 1.1.2). 2) Remove the cassette housing cover. 3) Remove two screws ①, one screw ② and two screws ③. 4) Push the cassette housing toward the drum once and raise it with the hook disengaged to disconnect the housing connector while removing the cassette housing. 2	**Cassette housing motor** – Removal –  **Fig. 2-3-4** (Perspective view of assembly position)	1) Remove the cassette housing ass'y. 2) Set the cassette housing to the assembly position (in which the holes of the motor bracket and the gear coincide with each other) as shown in Fig. 2-3-4. 3) Remove the hold lever after removing patching. 4) Remove three screws ④ (see Fig. 2-3-3) and remove the top frame. 5) Remove two screws ⑤ and remove the cassette motor together with the motor bracket. 6) Remove two screws ⑥ and unsolder wires. Then, the cassette motor can be removed.
	– Reinstallation –  **Fig. 2-3-5** Wiring of motor	1) Reinstall the cassette motor and peripheral parts in the reverse order of removal referring to Fig. 2-3-5. 2) When reassembling the motor bracket to the cassette housing, pay attention to the phase of the gear.

No.	Item	Adjustment and Check
3	In this model, power supply control signal and PRE/REC amp. control signal are supplied to the PRE/REC board from the brush. If either of installation and the contact pressure of the brush is incorrect, picture may not be played back.	
	Brush assembly – Removal –  **Fig. 2-3-6**	• Required tool : Hexagon key (2 mm) 1) Disconnect connectors from the brush ass'y (A) and (B). 2) Loosen the setscrew ① to remove bending in the brush. 3) Remove two screws ② and detach the brush ass'y (A). 4) Remove the brush ass'y (B) in the same manner.
	– Reinstallation –  **Fig. 2-3-7**	1) First of all, reinstall the brush assembly (A). 2) Confirm that the mount plate is positioned just 6 mm apart from the brush base as shown in Fig. 2-3-6. 3) Adjust the position of the brush so that its tip slightly contacts the slip ring, and tighten the setscrews ② to fix the brush. 4) Confirm that the brush is positioned in the center of the groove of the slip ring and parallel with the slip ling. 5) If not, adjust as follows. a) Loosen the setscrews ②. b) Set the bursh as its tip is positioned approximately 1 mm apart from the slip ring, and tighten the setscrew ②. c) Adjust the setscrews ③ so that the brush is positioned in the center of the slip ring's groove and in parallel with the slip ring. d) Loosen the setscrew ② and tighten the setscrews ② as the tip of the brush slightly contacts the slip ring. 6) As the brush's tip is in slight contact with the slip ring, turn the setscrew ① clockwise at an angle of 90° +45°.  **Fig. 2-3-8** 7) In the same manner as above, reinstall the brush assembly (B).

No.	Item	Adjustment and Check
4	**Upper drum assembly** – Removal –	• Required tool : Hexagon keys (1.27 mm, 2 mm) 1) Remove the brush assemblies (A) and (B) referring to 2.3.3. 2) Remove the head cleaner ass'y. 3) Remove the slit washer ① and the inertia rollers with care not to lose springs, etc. *Note: When the slit washer is removed once, replace it with new one (Part No. PQM30017-25).* 4) The next procedure will differ depending on the circumstances whether the slip ring needs to replace or not. – When slip ring needs to replace – 4-1) Disconnect four wires (red, orange, yellow and black) that are soldered to the PRE/REC board from the slip ring, then, loosen the setscrews ② (1.27 mm) while removing the slip ring. – When slip ring need not replace – 4-2) Loosen the setscrews ② (1.27 mm) and proceed to do the next step 5) to remove together with the PRE/REC board. 5) Unsolder the PRE/REC board by the four points (shown by ③ in figure) and remove the board. *Note: If it is tried to remove the PRE/REC board with incomplete unsoldering or with too much heating for unsoldering, the lower drum's pin may drop out of it. In that event, replace the drum ass'y as a whole.* 6) Unsolder at four points inside the UPPER DRUM board. 7) Remove two screws ④ and detach the upper drum ass'y.

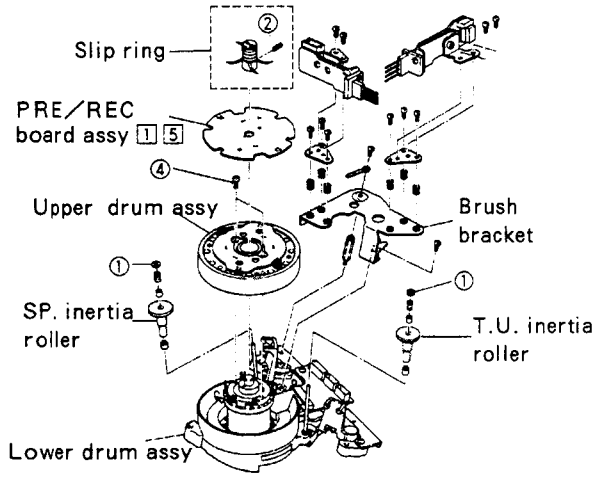

Fig. 2-3-9

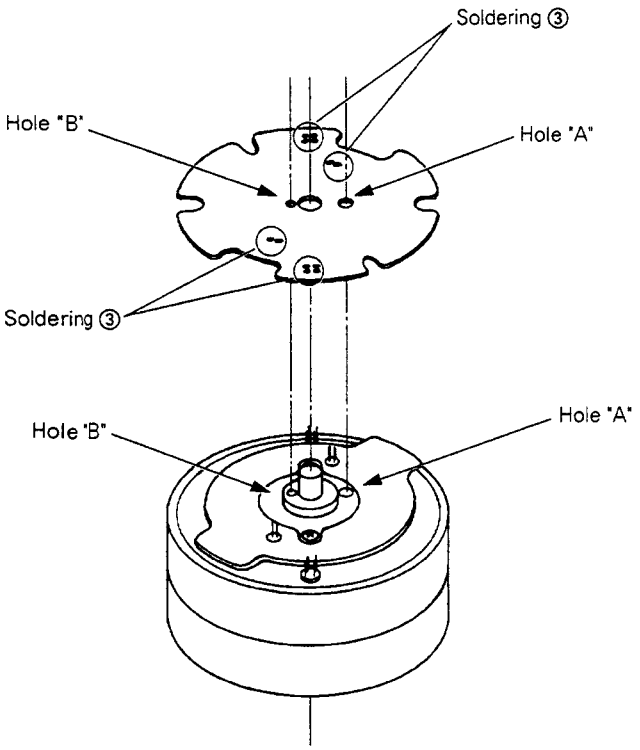

Fig. 2-3-10

No.	Item	Adjustment and Check
	– Reinstallation –  **Fig. 2-3-11** – Check and Adjustment – START → 2.7 Check of Tape Transport System → 3.2.2 Tracking preset check* → 2.6.5 X-value adjustment → 3.2.3 PB switching point adjustment → 3.3.15 Hi-Fi audio REC FM level adjustment → 3.4.13 RF equalizer adjustment → 3.4.14 REC FM level adjustment* → 3.4.15 REC frequency response adjustment* → 3.4.21 REC color level adjustment* → 3.4.22 DG compensation adjustment* → 3.4.33 Auto equalizer adjustment* → 3.4.38 2 fc cancel adjustment* → 3.4.39 ADD V. pulse adjustment → FINISH * BR-S522E need not these adjustments.	1) Clean both the contact surfaces of the upper drum ass'y and the lower drum ass'y with alcohol. 2) Assemble the upper drum ass'y to the lower drum assy so that the upper drum's hole "A" (ø 2.7) and the flywheel's hole "B" (ø 1.6) are oppositely positioned at an angle of 180°. At that time, tighten the screw ④ with a torque of 4.5~5.0 kg-cm. 3) Check wobbling of the upper drum in the rim (see 2.3.5). 4) After confirming no wobble in the upper drum movement, solder the UPPER DRUM board. 5) Assemble the PRE/REC board to the drum ass'y so that the holes "A" and "B" of the PRE/REC board overlap the holes "A" and "B" mentioned in the above step 2) respectively, and solder the board (see Fig. 2-3-10). 6) The next procedure will differ depending on the circumstances whether the slip ring is replaced or not. – When slip ring is replaced – 6-1) Install the slip ring and tighten the setscrew. Then solder four wires (red, orange, yellow and black) as specified. – When slip ring is not replaced – 6-2) Confirm that the slip ring is correctly installed, and tighten the setscrew to fix it. 7) Install the brush assemblies (see 2.3.3). 8) After the above steps, proceed to the "Check and Adjustment" mentioned in the left column.

No.	Item	Adjustment and Check
5	**Centering of upper drum (To remove upper drum wobbling in the rim)** If the upper drum is installed being deviated from the center of the drum shaft, it causes jitter, etc. After replacement of the upper drum, if it was done, make sure to confirm no wobbling in the upper drum's rim.	

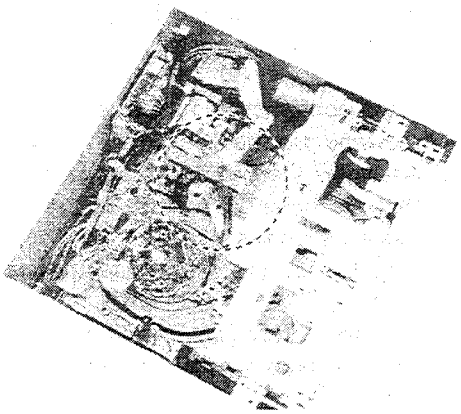

Fig. 2-3-12

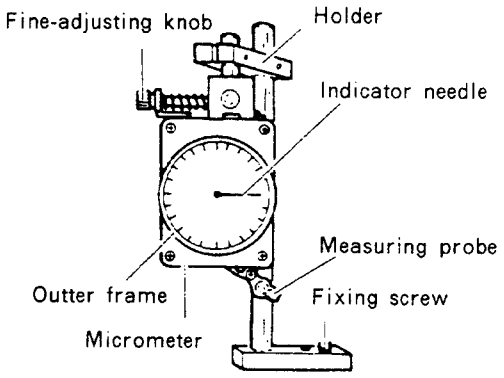
• Cautions to handle microchecker

1) Keep the microchecker out of any shock or strong vibration since it is a high precision instrument.
2) Do not apply unnecessary force to the measuring probe.
3) Although the outer rim of the micrometer is turnable in a range of ±10 graduations, do not turn it with strong force (more than 300 gr-cm).
4) Be careful not to touch the microchecker with heads, particularly with the video heads.
5) On setting the microchecker, make sure that the working direction of the measuring probe points at the center of the upper drum.
6) If rubbing or grating sound occurs in measuring, it results from incorrect setting or abnormal contact of the microchecker. Confirm that there is no dust and other contamination on the upper drum and tip of the measuring probe.



Microchecker PUJ49712-2

Note:For centering the upper drum, a setscrew (SDSP2610Z) is necessary besides a micro-checker.

1) Set the operation mode to the C. cassette mode and turn off the power switch.
2) Prepare a microchecker and remove its hex. head screw from the base.
3) Set the microchecker holder at the position shown in Fig. 2-3-12 and fix it with a setscrew (SDSP-2610Z).
4) Set the micrometer with care not to knock it against the upper drum.
5) Slowly turn the fine adjustment knob of the microchecker clockwise until the pointer reads "0". Pointer adjustment is possible by turning the outer ring of the micrometer, but it must be within ±10 graduations.
   To apply the microchecker to the drum ass'y, place it between the 4th and 5th grooves of the drum from the top.
6) Turn the upper drum gently (with a paper string, for instance) with care not to apply lateral pressure to it. If the pointer deflects, it must be for ±1 micron at maximum.
7) When the pointer deflection exceeds ±1 micron, turn the fine adjustment knob counterclockwise and remove the measuring probe from the upper drum. Loosen two screws retaining the upper drum while adjusting its position slightly, and tighten the screws again.
8) Check the pointer deflection again. If it is still out of the limit, repeat the above step until deflection becomes within ±1 micron.
9) After deflection is confirmed allowable, turn the fine adjustment knob counterclockwise and remove the microchecker.
10) Turn on the power switch and set the operation mode to the Full Cassette mode.
11) Connect an oscilloscope's probe to the front service terminal "V-RF", and play the MHPE alignment tape.
12) Turn the oscilloscope's tracking VR while confirming that CH-1 FM waveform and CH-2 FM waveform are maximized at the same time.
13) When the waveforms greatly differ from each other, remove the upper drum and clean both of the upper drum's lower surface and the upper surface of the lower drum's flywheel. After cleaning, repeat the above steps 1) through 12).
14) If waveforms are still unsatisfactory after the above adjustment, it is recommended to replace the drum ass'y.

No.	Item	Adjustment and Check
6	**Drum assembly**  **Fig. 2-3-13**	*Note: When holding the drum ass'y, do not catch it by the brush ass'y.* *For replacing the pole base, do it after removing the drum ass'y.* 1) Referring to Fig. 2-3-9, remove the slit washer ①, then remove the inertia rollers. 2) Remove the head cleaner ass'y. 3) Remove three screws ① and disconnect connectors while removing the drum ass'y for replacing. 4) Reassemble the inertia rollers. 5) After the replacement, check and adjust according to the flowchart in page 2-9.
	– Reference – Before replacing drum assembly  Tracking center  Tracking (–)  Tracking (+)	1) Connect an oscilloscope's probe to the front service terminal "V-RF" and input D-PULSE to the oscilloscope for external triggering. 2) With the MBPE-2 alignment tape being played back, turn the oscilloscope's tracking control while observing the FM waveform. 3) When such waveforms as shown in the figures are observed, they indicate that drum leads are worn. In that event replace the drum ass'y.

No.	Item	Adjustment and Check
7	**A/C head** – Replacement –  **Fig. 2-3-14**	• Required tools · Taper nut driver (PUJ50637) · Nut driver (7 mm) 1) Disconnect connectors from the A/C HEAD board. 2) Remove the taper nut ① for X value adjustment. 3) Remove the nut ② and detach the A/C head together with the head base with care not to lose the spring ③ positioned underneath. Also pay attention to the spacer under the nut not to lose it. 4) After removing two screws ④ and a screw ⑤, take the A/C head out of the main deck. At that time, be careful not to lose the spring. 5) Remove soldering from the A/C head and replace it.
	– Installation –  **Fig. 2-3-15**	1) Before reassembling the A/C head to the main deck, temporarily adjust its height as shown in the figure. 2) Reassemble the A/C head and its peripheral parts to the main deck in the reverse order of disassembling. 3) On setting the taper nut, adjust the height as shown in the figure below. 	– Check and Adjustment –	*Note: Before confirming normal tape transport, do not use any alignment tape to prevent it from damag. Make sure to check tape transport with an ordinary recording tape beforehand.* *After confirming normal tape transport, perform the following checks and adjustments.* 1) A/C head adjustment (see 2.6.4) 2) Tape transport check (see 2.7) 3) X value adjustment (see 2.6.5) 4) FM waveform check (see 2.6.2) 5) Electrical adjustments for audio circuit (see 3.3) • PB level (3.3.2) • PB frequency response (3.3.3) • REC/PB level (3.3.5)* • REC/PB frequency response (3.3.6)* • Cross talk cancel (3.3.9)* * BR-S522E need not these adjustments.

No.	Item	Adjustment and Check
8	**Mechanism assembly**  Fig. 2-3-16	1) Remove the cassette housing ass'y (see 2.3.1). 2) Remove three screws ①. 3) Disconnect all connectors from the mechanism ass'y. 4) Hold up the mechanism ass'y and disconnect connectors from the lower drum ass'y while removing the mechanism ass'y. 5) When reinstalling the mechanism ass'y, make sure to insert specified collars. *Note: IF any collar was not set in the specified portion, insert two collars (Part No. PRD44048) in the screw holes bordered by broken lines respectively.*
9	**Tension arm assembly** – Removal –  9 2 DECK TERMINAL board Fig. 2-3-17	1) Remove the mechanism assy (see 2.3.8). 2) Remove two screws ① and remove the DECK TERMINAL-2 board. 3) Remove the slit washer ② and lift the tension arm ass'y upward to remove it (see Fig. 2-3-18). *Note: When the slit washer is removed once, replace it with new one (Part No. PQM30017).*
	– Reinstallation –  Fig. 2-3-18	1) Reassemble the tension arm ass'y and its peripheral parts to the main deck in the reverse order of removing. 2) After reinstalling or replacing the tension arm ass'y, adjust and check the following items. a) Tape transport system adjustment (see 2.7) b) Reel servo circuit adjustment (see 2.5)
10	**Pinch roller arm assembly**  Fig. 2-3-19	*Note: For removing the motor bracket, set the operation mode to the C. cassette mode.* 1) Remove four screws ① and remove the motor bracket. 2) Lift the pinch roller arm ass'y upward to remove it. 3) For installing the pinch roller arm assy, pay careful attention to the phase of respective gears referring to the item No. 1 of "2.4 Assembling of Mechanism".

No.	Item	Adjustment and Check
11	**Capstan motor**  **Fig. 2-3-20**	1) Remove the mechanism ass'y (see 2.3.8). 2) Remove the pinch roller arm ass'y referring to 2.3.10. 3) Remove three screws ① and disconnect connectors. Then, remove the capstan motor. 4) When the capstan motor is replaced, check and adjust the capstan FG duty ratio and the level (see 3.2.1).
12	**Reel motor**  **Fig. 2-3-21**	1) Remove the mechanism assy (see 2.3.8). 2) Set the sensor LED to the assembling position. 3) Remove four screws ①, then remove the reel motor ass'y. 4) Set a new reel motor sensor LED to the assembling position. 5) On installing, be careful to engage the brake lever with the solenoid's pin exactly. 6) Return the sensor LED to the operation position. 7) When the reel motor ass'y is replaced, check and adjust the reel FG duty (see 2.5.5).
13	**Loading motor**  **Fig. 2-3-22**	1) Disengage the drive belt from the motor pulley and remove it. 2) Remove two screws ① and remove the loading motor. If it is hard to remove it, remove four screws ② and the motor bracket, too.

No.	Item	Adjustment and Check
14	**Main brake, T.U. sub brake** Condition that reel motor is removed  Slit washer: PQM30017-6 **Fig. 2-3-23**	1) Remove the mechanism ass'y (see 2.3.8). 2) Remove the reel motor (see 2.3.12). 3) Remove the slit washer, then remove the main brake and sub brake. *Note: When the slit washer is removed once, replace it with new one (Part No. PQM30017-6).*  Slit washer: PQM30017-6 **Fig. 2-3-24**
15	**Pole base assembly** Stopper : PRD43471  **Fig. 2-3-25** ① SDSP2608M  ② SDSP2608M **Fig. 2-3-26**	1) Remove the mechanism ass'y (see 2.3.8). 2) Remove the drum ass'y (see 2.3.6). 3) Supply pole base 3-1) Turn the loading motor counterclockwise to set the mechanism to the loading end position. 3-2) After removing the stopper, lift the pole base ass'y upward while removing it. 4) Take-up pole base 4-1) Remove the A/C head ass'y. 4-2) Remove two screws ① and three screws ②, then take the loading ass'y (T.U.) away. When removing the screws ②, be careful not to lose spacer. 4-3) Remove two stoppers ③ and lift the pole base ass'y upward to remove it. *Note: When the stoppers are once removed, replace them with new ones.*  **Fig. 2-3-27**

2.4 ASSEMBLING OF MECHANISM

No.	Item	Adjustment and Check
	In the mechanism of this model, there is a close relation between the rotary encoder and the mechacon circuit. Namely, operations of the mechanism parts are determined by rotational angle of the rotary encoder, in detail, cam gear's rotational angle. If there is something installed abnormally in these mechanism parts, it causes malfunction of the mechanism. Assembling of mechanism parts of this model must be performed in the C. cassette mode (the pole base assy is returned to the utmost reel side).	
1	**Cam gear** **Pinch roller cam** **Pinch roller** **Control cam** **Guide arm gear**	1) Set the control cam so that its hole coincides with the main deck's hole, and temporarily fix them by inserting a precision screwdriver, etc. 2) Fit the pinch roller cam together with its hole being positioned as shown in Fig. 2-4-1. At that time, insert the pin of the cassette housing lever into the inner groove of the pinch roller cam. 3) Fit the pinch roller together. 4) After adjusting the phase of the rotary encoder, engage the cam gear with care of its phase. • Working points a) Fix the control cam with a precision screwdriver, etc. to prevent it from rotating. b) Make sure to insert the pin of the cassette housing lever into the inner groove of the pinch roller cam. c) Fit the cam gear's pawl into the dimple of the rotary encoder.
2	**Loading gear (S)** **Loading gear (T)** **Cancel lever** **Arm gear**	1) Assemble the supply loading gear and the take-up loading gear to the main deck as respective gear holes of the two face each other. 2) Engage the cancel lever and the arm gear with them as their holes face the holes of the loading gears respectively. • Working point a) When engaging the arm gear, turn the control cam clockwise as viewed from the deck's back side (in other words, turn the loading motor counterclockwise) so that the arm gear's pin is put in the outer groove of the control cam.

2.5 ADJUSTMENT OF REEL SERVO CIRCUIT

Note: Before proceeding to adjust this item, make sure that the "Tension poly perpendicularity (vertical centering) check" (2.7-5) is correctly adjusted.

No.	Item	Adjustment and Check
	Note: 1. Setting back of the cassette torque meter must be performed in the Search (X10) mode, otherwise it may be damaged. Do not do it in the FF/REW mode and the Reel Search mode. *2. In the middle of loading torque adjustment, pressing SW2 varies torque by 2 g-cm at each pressing.* *3. If the cassette torque meter reaches the tape end or the tape beginning in the middle of adjustment, repeat it from 1) of the following adjustment steps.* *4. In the following description, all test points and adjustment parts are located on 3 1 M. CTL & R. SERVO board unless otherwise specified.* *5. Location map of test points and adjustment parts is printed in page 2-19.*	
1	**Tension sensor position**	• Required jigs: · Spacer (0.1 mm thick) or, PRD40300 (earth plate on the sub-deck of BR-S811 type) · Tension arm positioning jig (PGJ04031) 1) Turn off the power once and remove the cassette housing. After setting SW1 as shown on the left, again turn on the power. 2) The mechanism is in the loading end stop mode. 3) Loosen the setscrew ① and move the base of the tension sensor in the direction of the arrow → to the extent. Then tighten the setscrew ①. 4) Loosen the setscrew ② slightly. 5) Insert a spacer of 0.1 mm thick between the tension sensor and the tension arm shaft as shown in the figure, and adjust the position of the tension sensor so that the gap between the tension sensor and the tension arm shaft is 0.1 mm. After adjustment, tighten the setscrew ②. 6) Remove the spacer and connect a digital voltmeter to TP6 to measure output voltage. Take note of the data as V1. 7) Set the tension pole to the "MAX" position of the tension arm positioning jig, and measure the output voltage. Take note of this result as V2. 8) Change the setting position of the tension arm positioning jig to the "PLAY" and measure the output voltage (V3). Confirm that V3 meets the following specifications. $V3 \leqq 0.581 \cdot V1 + 0.419 \cdot V2$ $V3 \geqq 0.681 \cdot V1 + 0.319 \cdot V2$ 9) If not, proceed as follows. a) If out of the upper limit, loosen the setscrew ① and move the hall element leftward. b) If out of the lower limit, loosen the setscrew ① and move the hall element rightward. c) In either case, the gap between the tension sensor and the tension arm shaft must be 0.1 mm. 10) Again check the above steps 6) through 8). 11) After confirming the results satisfactory, apply screw sealant to the setscrews ① and ②. 12) On completion of the above procedure, check and adjust the following items. a) Hall element output bias voltage (see 2.5.2) b) Hall element output gain (see 2.5.3) c) Play mode back tension (see 2.5.6) d) Reverse (x1) torque (see 2.5.7) e) Tension warning data setting (see 2.5.8)

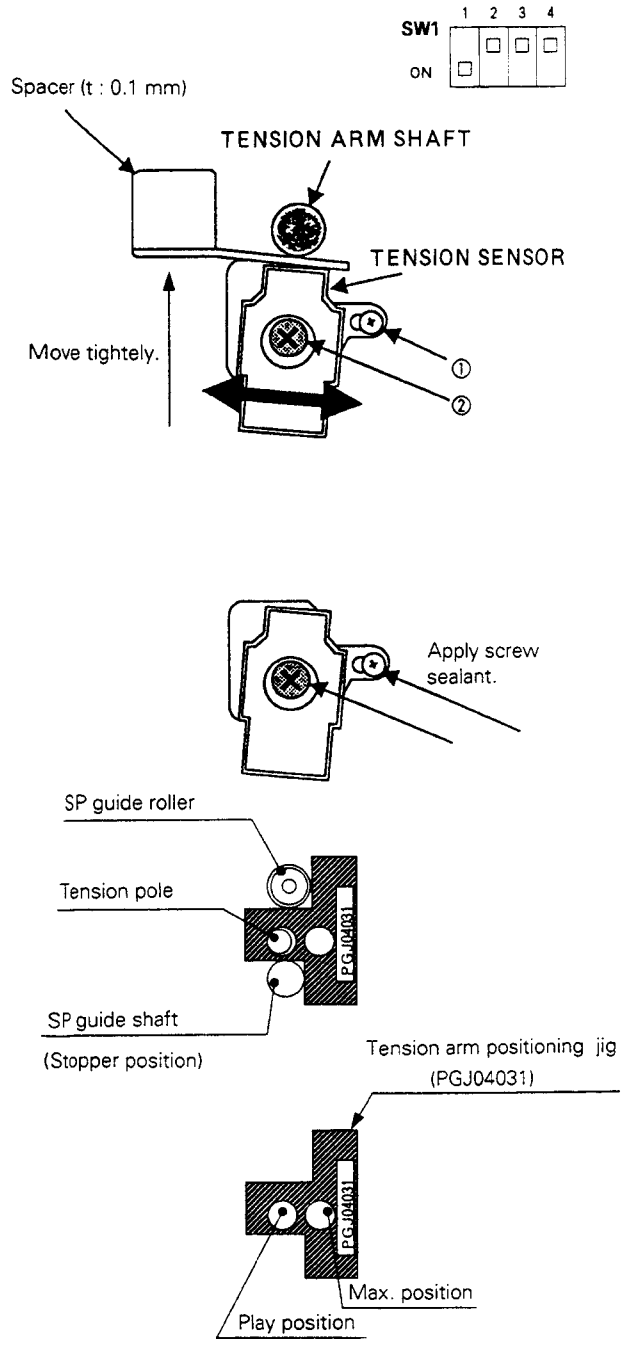

Fig. 2-5-1

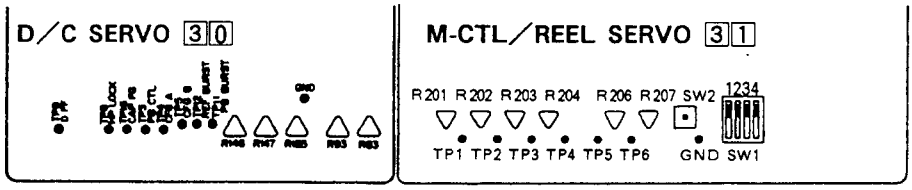
Arrangement of test points and VRs



2	**Hall element output bias**	TP6	R206 (TENS BIAS)	SW1 ON 1 2 3 4	1) Turn off the power once. Set SW1 as shown on the left and again turn on the power. 2) The mechanism is in the loading end stop mode. 3) Connect a digital voltmeter to TP6 and adjust R206 so that the voltmeter reads 0 ± 0.05 V. Take note of this result as V1. 4) Set all switches of SW1 to OFF and turn off the power again. 5) After the above steps, check and adjust the following items. a) Hall element output gain (see 2.5.3) b) Play mode back tension (see 2.5.6)
3	**Hall element output gain**	TP6	R207 (TENS GAIN)	SW1 ON 1 2 3 4	• Required jig : Tension arm positioning jig (PGJ04031) 1) Turn off the power once. Set SW1 as shown on the left and turn on the power again. 2) Set the tension pole to the "MAX" position of the tension arm positioning jig. 3) Connect a digital voltmeter to TP6 and adjust R207 so that the voltmeter reads as follows. V1 + 5 ± 0.05 V (V1: voltage at the stopper position) 4) Set all switches of SW1 to OFF and turn off the power again.

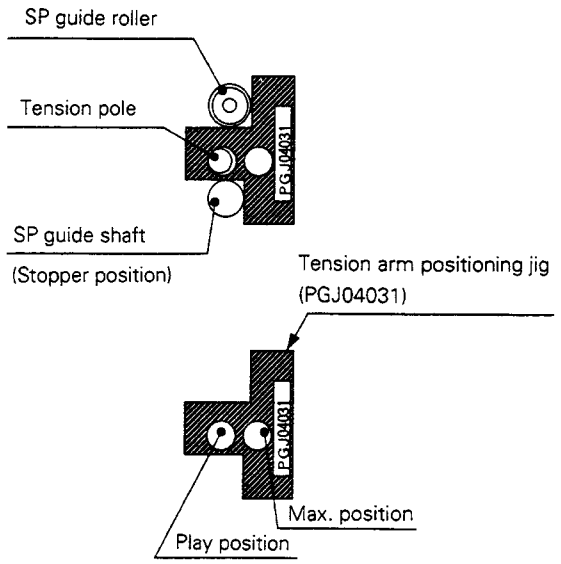


Fig. 2-5-2

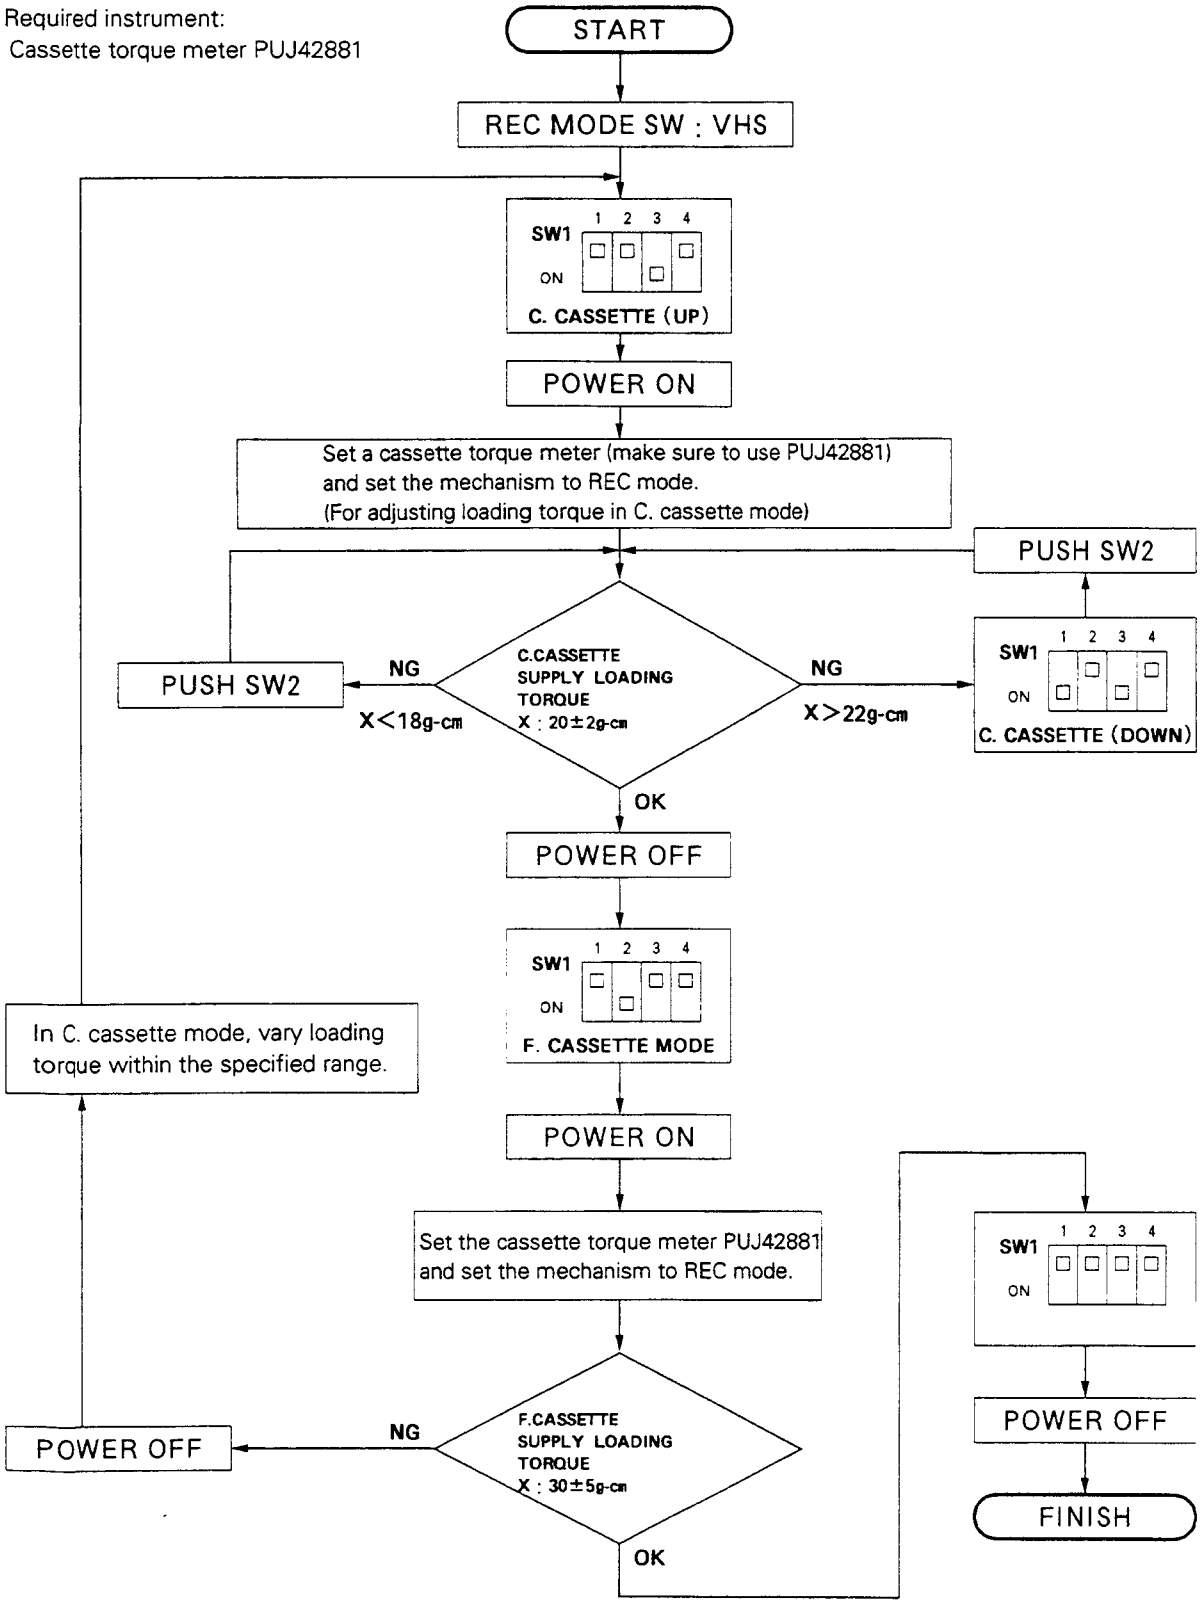
No.	Item	Check Point	Adjustment Parts	Signal & Mode	Adjustment and Check
4	**Loading torque**				

According to the following flowchart, adjust loading torque in the C. cassette mode first, then, check loading torque in the F. cassette mode. For torque adjustment, press SW2 to increase torque by 2 g-cm approximately at a time.

- Required instrument:
  Cassette torque meter PUJ42881



No.	Item	Check Point	Adjustment Parts	Signal & Mode	Adjustment and Check
5	**Reel FG duty**	TP1 (SP FGA) TP2 (SP FGB) TP3 (TU FGA) TP4 (TU FGB)	R201 (SP FGA) R202 (SP FGB) R203 (TU FGA) R204 (TU FGB)		1) Turn off the power once, and set SW1 as shown on the left. Again turn on the power and the mechanism enters the adjusting mode. 2) Connect an oscilloscope to TP1. 3) Adjust R201 so that the duty ratio becomes 50 ± 5 %. 4) Perform the same adjustment with other TPs. 5) Set all switches of SW1 to OFF and turn off the power again.
6	**Play mode back tension**	Cassette torque meter (PUJ42881)	R206 (TENS BIAS)	 • REC	1) Set the REC mode switch on the front sub-panel to "VHS". 2) Turn off the power once and set SW1 as shown on the left. Then, turn on the power again. 3) Set the cassette torque meter and set the operation mode to REC. 4) Adjust R206 so that back tension (value at the supply side) becomes 52 ± 2 g-cm. 5) Set all switches of SW1 to OFF and turn off the power again.
		Supply back tension : 52 ± 2 g-cm Take-up torque : 170 ± 20 g-cm			
7	**Reverse (X1) torque** • Required instrument: Cassette torque meter PUJ42881B				 ※ For torque adjustment, use SW2 that varies torque by 2 g-cm every time it is pressed.

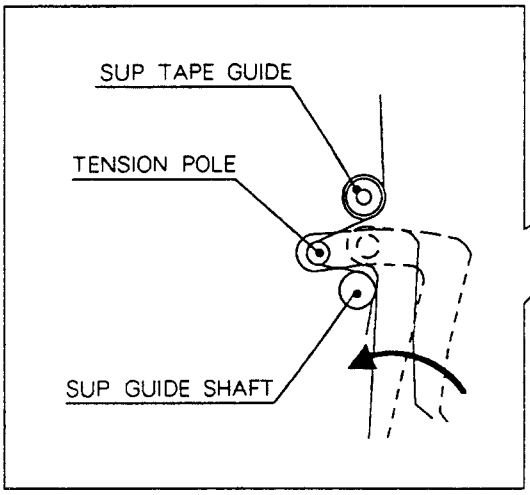
8	**Tension warning data setting**				



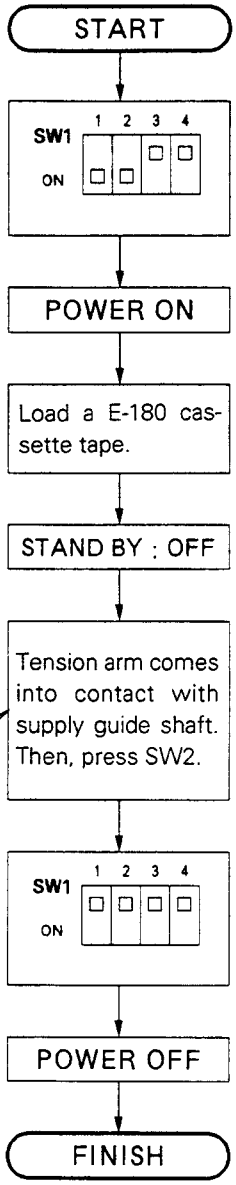


Fig. 2-5-3

2.6 INTERCHANGEABILITY ADJUSTMENT

No.	Item	Adjustment and Check
	Replacement of the upper drum ass'y, drum ass'y, A/C head ass'y, etc. has need of interchangeability adjustment.	
1	**Names of main parts**	

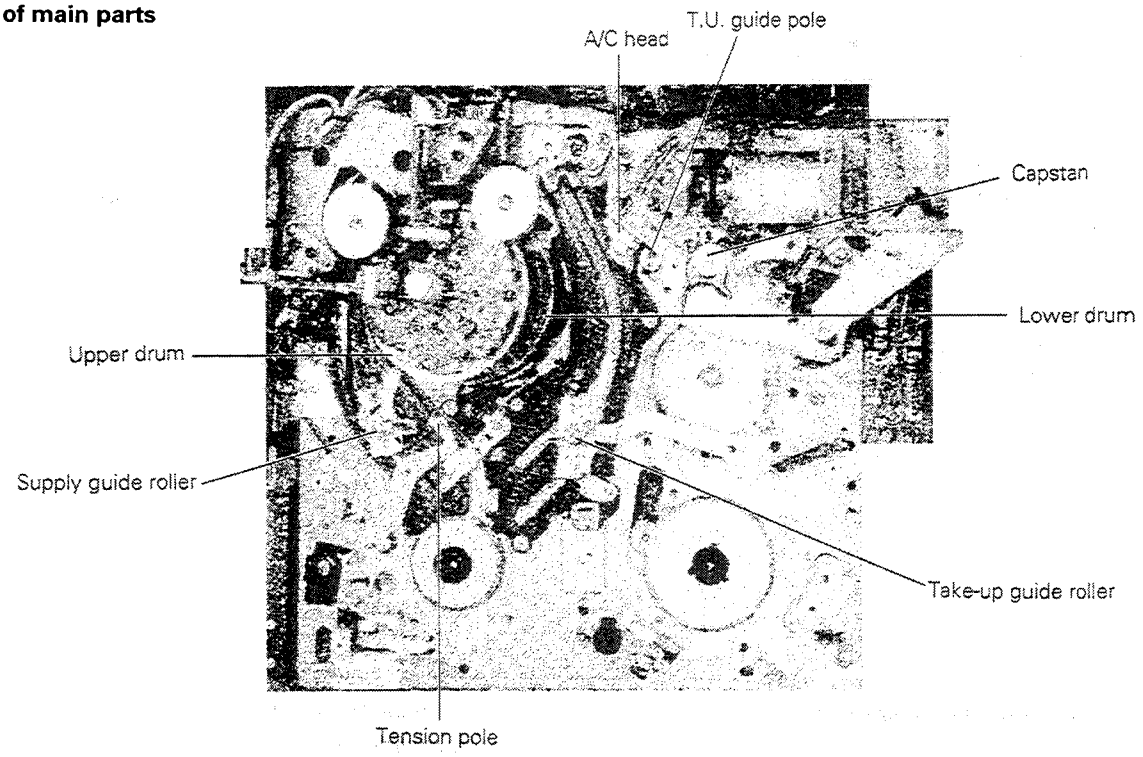

Fig. 2-6-1

2	**FM waveform check**	*Note: Prior to use of any alignment tape, confirm normal operation of the tape transport system with a general recording tape.*

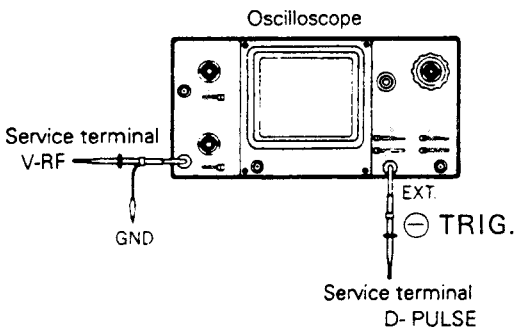

Fig. 2-6-2

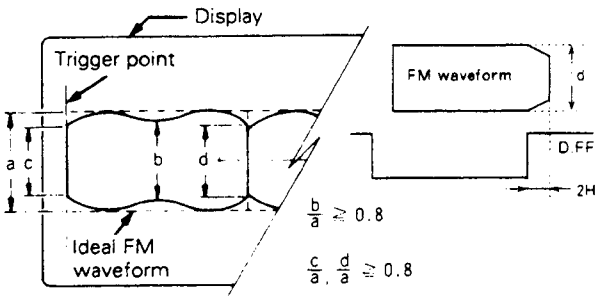

Fig. 2-6-3

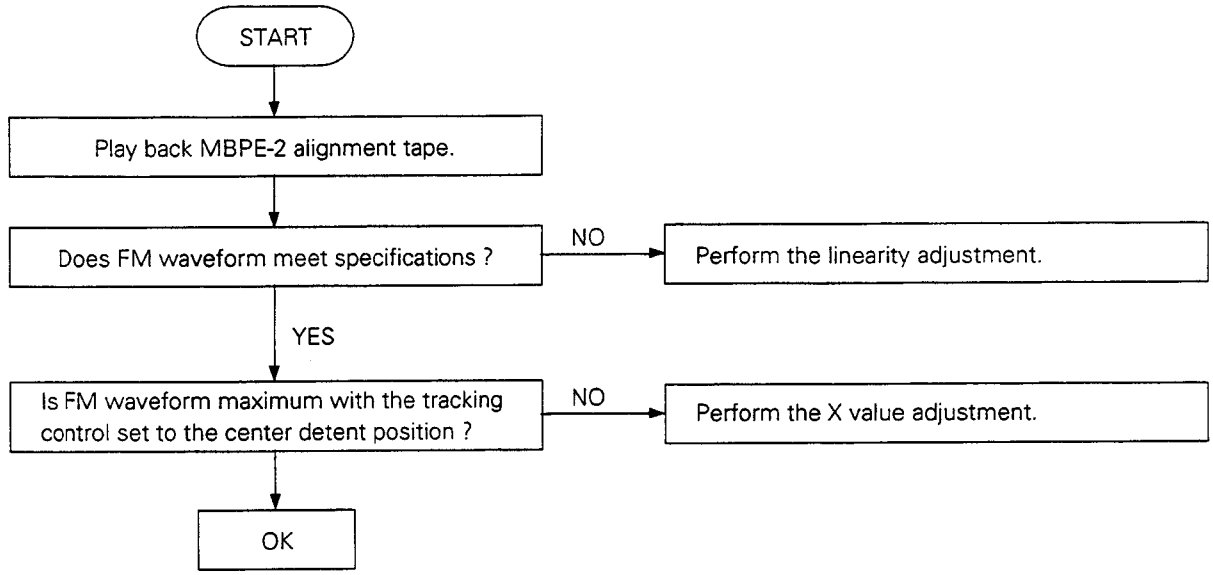
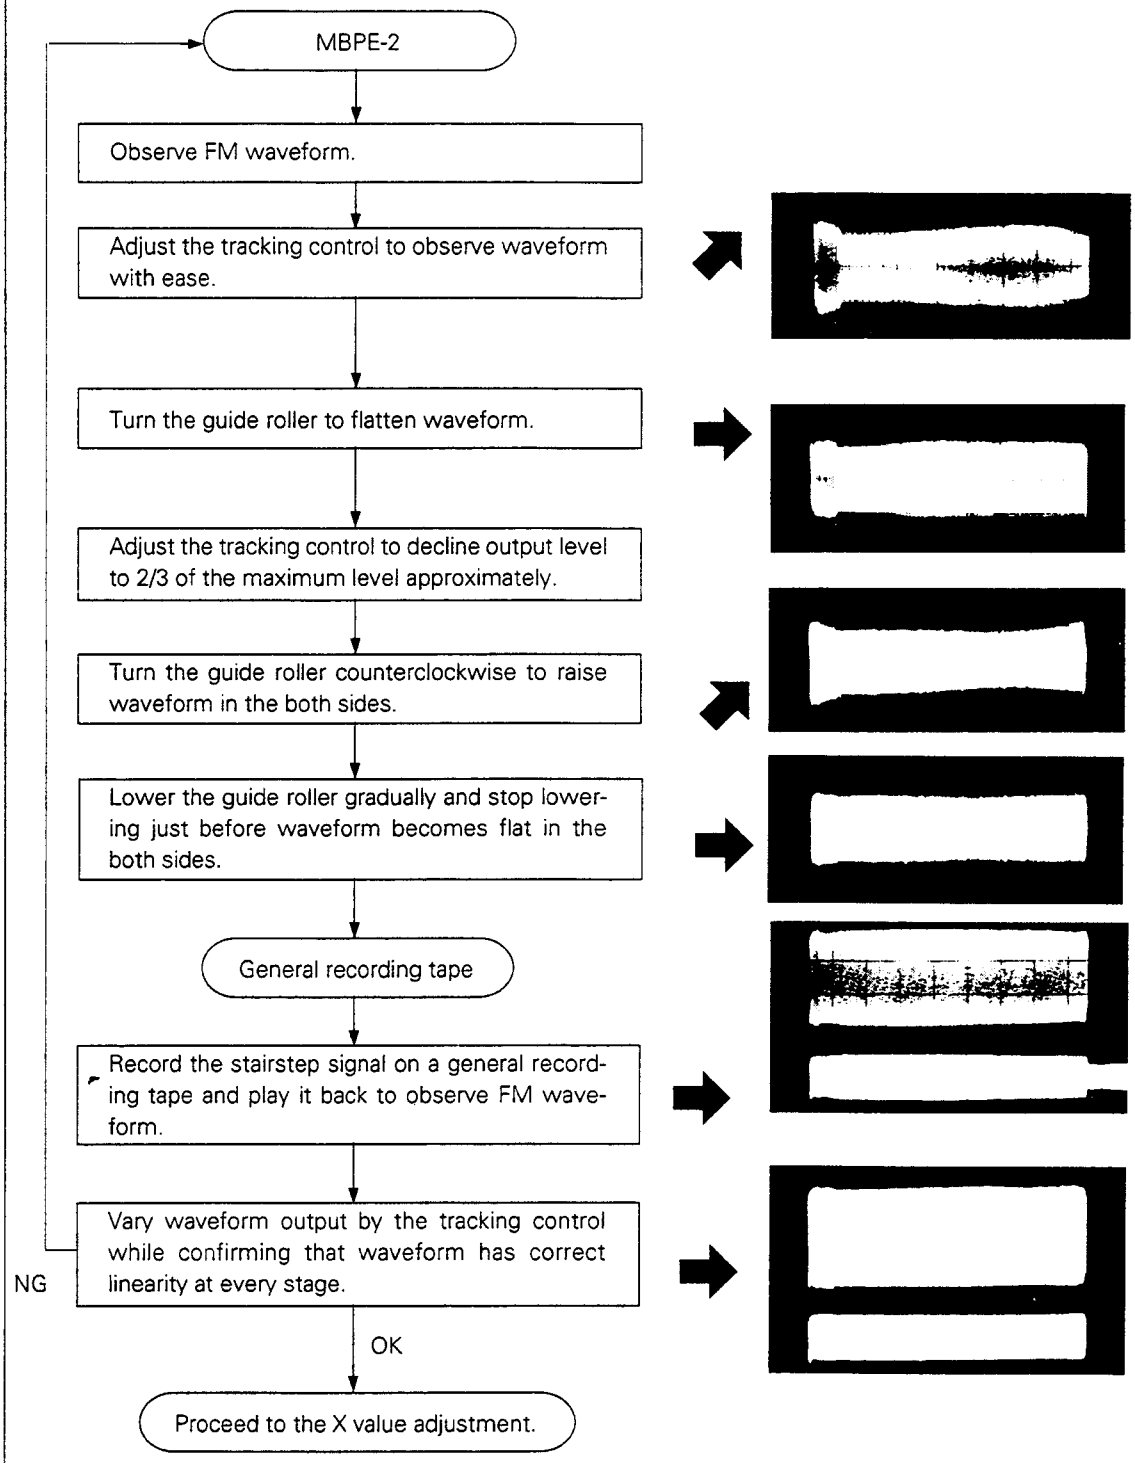
1) For observing FM waveform, connect an oscilloscope's probe to the front service terminal (V-RF) while connect the other probe to the D-PULSE front service terminal for external sync. signal input. Observe waveform on the minus (–) slope.
2) With the MBPE-2 alignment tape being played back, adjust the oscilloscope's tracking control to maximize FM waveform. Measure respective levels shown in Fig. 2-6-3 and confirm that the ratio of each level to the maximum level (a) meets the specifications.
3) When the maximum level (a) is set for 4 graduations of the oscilloscope scale, each level (b), (c), (d) should be for 3.2 graduations or more.

Note: To set the maximum level (a) for 4 graduations, adjust the oscilloscope's gain control with the tracking control set to the maximum position.

No.	Item	Adjustment and Check
		


3	**Interchangeability adjustment** – Linearity adjustment –  **Fig. 2-6-4**	• Cautions for adjustment: • *For linearity adjustment, play back the MBPE-2 alignment tape.* • *If FM dropout cannot be corrected by guide roller adjustment, it needs to replace the drum ass'y. This case applies to the condition that the same phenomenon occurs in both of CH-1 and CH-2 FM waveforms.* • *Examples of FM waveform with a worn lower drum are shown in the previous section 2.3.6 "Drum assembly".* • Required tools: · Hex. driver (PGJ04034) or, Hex. key (2 mm) · Line head wrench (PGJ04033)

No.	Item	Adjustment and Check



No.	Item	Adjustment and Check
4	**A/C head adjustment** If the A/C head is incorrectly positioned, it causes dropdown or poor S/N ratio in playback audio signal, or misaligned servo without picking-up of control signal in the worst case when a recorded tape is played back.	

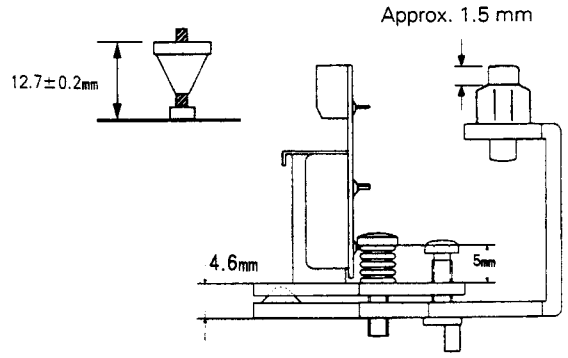


Fig. 2-6-5

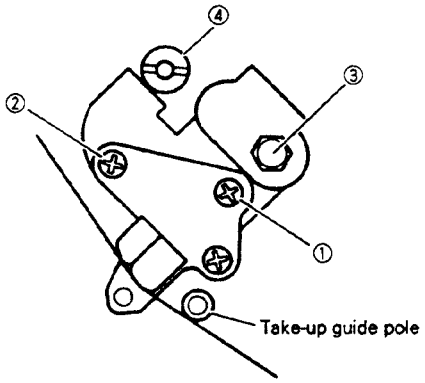

Fig. 2-6-6

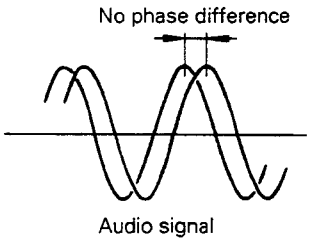

Fig. 2-6-7

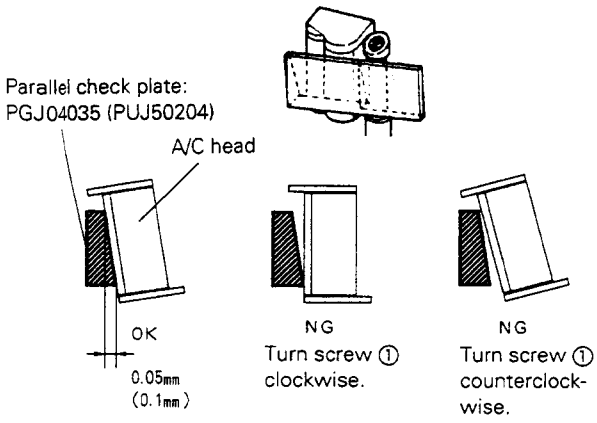

Fig. 2-6-8

- Required tools and alignment tapes:
  - Nut driver (7 mm)
  - Alignment tapes (MBAE-3, MHPE,MBAE)
  - Parallel check plate : PGJ04035 (0.05)
    PUJ50204 (0.1)

(1) Temporary height check before adjustment

1) At the stage of tape transport check prior to proceeding to adjust the A/C head, fix the A/C head at a temporary height in order to prevent the alignment tape from being damaged as well as to perform adjustment with ease.

(2) Tilt (forward bent) adjustment

1) With the parallel check plate (PGJ04035 for 0.05), adjust the setscrew ① to tilt the A/C head to match the plate.
   If thers is a gap in the upper part of the A/C head, tighten the setscrew ① to increase the tilt. If there is a gap in the lower part of the A/C head, loosen the setscrew ① to decrease the tilt.
2) Confirm that the tape is not wrinkled and damaged at the lower flange of the take-up guide pole. If so, fine adjust the height of the take-up guide pole.

(3) Adjustment of A/C head height and azimuth

1) Connect an oscilloscope's CH-1 to TP3 on 2 1 AUDIO-1 board and CH-2 to TP4, and set the oscilloscope to the CHOP mode.
2) Play back the alignment tape MBAE-3 while turning the hex. head nut ③ to minimize both CH-1 and CH-2 output levels by adjusting the A/C head height.
3) Play back the alignment tape MHPE while turning setscrew ② to match CH-1 and CH-2 output waveforms in the phase as well as to maximize the output levels. (azimuth adjustment)
4) Repeat the above steps 2) and 3) alternately for finer adjustment.

(4) Azimuth check

1) Connect an oscilloscope's CH-1 to TP3 on 2 1 AUDIO-1 board and CH-2 to TP4, and set the oscilloscope to the CHOP mode.
2) Play back the alignment tape MBAE and confirm no phase difference between CH-1 and CH-2 output waveforms (allowance: 0.1 msec or less). If phase difference is more than 0.1 msec, repeat the previous item No. (3) "Adjustment of A/C head height and azimuth".

(5) A/C head parallel check

1) With the parallel check plate (PUJ50204), confirm that tilt of the A/C head is within 0.1 mm on the measurement basis shown in the figure.
2) If not, repeat the above adjustment procedures from (2) to (4).

No.	Item	Adjustment and Check
5	**X value adjustment** If the X value is adjusted incorrectly, it results in time lag between picture and normal sound in playback of a tape recorded by a set whose X value is correctly adjusted.	

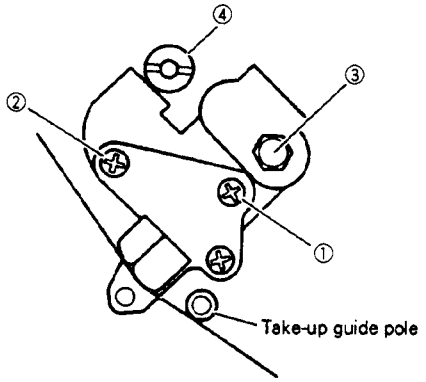

Fig. 2-6-9

Adjust two phases.

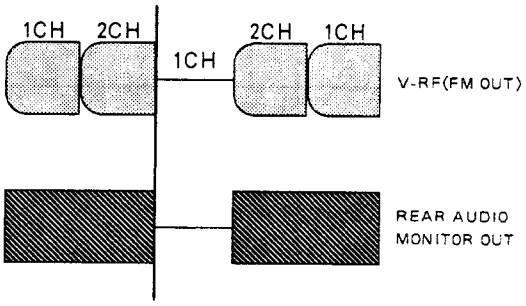

Fig. 2-6-10

• Synchronizing of oscilloscope:
1. Set the oscilloscope's time sweep to 10 msec.
2. In synchronization with D. FF signal, turn the oscilloscope's HOLD OFF knob in the (+) direction to stabilize non-recording portion.

- Required tool and alignment tapes
  - Taper nut driver (PUJ50637)
  - Alignment tapes (MBPE-X, MHPE)

For BR-S822/S622

1) Preparation
- Connect an oscilloscope's CH-1 to "V-RF" of the front service terminal and CH-2 to the rear panel's AUDIO MONITOR OUT terminal, and set the front panel's AUDIO MONITOR switch to NORM, AUD-1/L.
- Connect the oscilloscope's external input terminal with the D-PULSE of the front service terminal for external synchronization.
- Record the signal and play it back to confirm that the FM waveform is maximum with the tracking control set to the center position. If not, check the tracking adjustment (3.2.2) again.
- Set the tracking control to the center position.

2) Play back the alignment tape MBPE-X.
3) Adjust the taper nut ④ so that non-recording portions of AUDIO and FM siganls match in the phase (±1 field) with maximum FM output.
4) Play back the alignment tape MHPE and confirm that FM waveform is maximum with the tracking control set at the center position.
5) If the result of the above step 4) is unsatisfactory, move the A/C head to the maximum FM waveform position nearest the adjustment point of the above step 3).

For BR-S522

Note: The following is for X-value adjustment and tracking preset adjustment.

1) Preparation
- Set for the "adjustment mode 4". (Refer to 1.9 Adjustment Mode, page 1-30.)
- Connect an oscilloscope's CH-1 to "V-RF" of the front service terminal and CH-2 to the rear panel's AUDIO MONITOR OUT terminal, and set the front panel's AUDIO MONITOR switch to NORM, AUD-1/L.
- Connect the oscilloscope's external input terminal with the D-PULSE of the front service terminal for external synchronization.

2) Play back the alignment tape MBPE-X.
3) Adjust the taper nut ④ so that non-recording portions of AUDIO and FM siganls match in the field (±1 field) with maximum FM output.
4) Cancel the adjustment mode and play back the alignment tape MBPE-X.
5) Adjust R146 on [30] D/C SERVO board so that non-recording portions of AUDIO and FM signals match in the phase (±1 field) with maximum FM output.

2.7 ADJUSTMENT OF TAPE TRANSPORT SYSTEM

No.	Item	Adjustment and Check
	In general, the tape transport system has no need of adjustment since it has precisely been adjusted before shipment. Check and adjustment are required only after long time use and parts replacement of the tape transport system.	
1	**Check of tape transport system**	• Required implements : Thin tape (SE-240,SE-C30) 1) With a thin tape loaded in, check the following things at the beginning and the end of the tape. a) Repeat loading and unloading operations to confirm that the tape is neither damaged nor wrinkled at the guide pole, guide roller and guide arm roller. b) Repeat the same check in the Play mode, FWD mode and REV mode respectively.

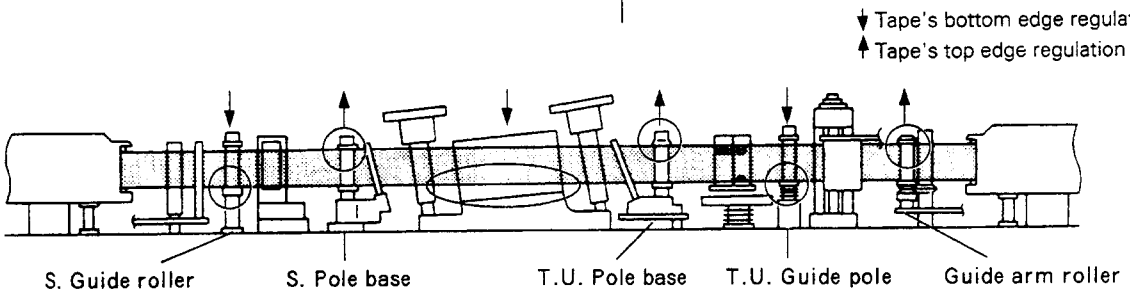

Fig. 2-7-1

2	**Supply guide roller height adjustment**	• Required implements: · Height gauge (PGJ04032) · Hex. driver (PGJ04034) · Hex. key (1.27 mm) · Thin tape (SE-240) 1) With the height gauge set on the main deck, check the height of the upper surface of the lower flange under the supply guide roller. 2) If it needs adjustment, loosen a setscrew underneath the guide roller and adjust the height of the guide pole with a hex. driver. 3) With a thin tape loaded in, fine adjust the guide roller height in the Play mode so that the tape smoothly runs on the lower flange of the guide roller. 4) Confirm no damage on tape in the REV mode. If the tape is damaged, slightly decrease the guide roller height within a half turn adjustment of the hex. driver. 5) Tighten the setscrew. 6) Check smooth tape transport again.

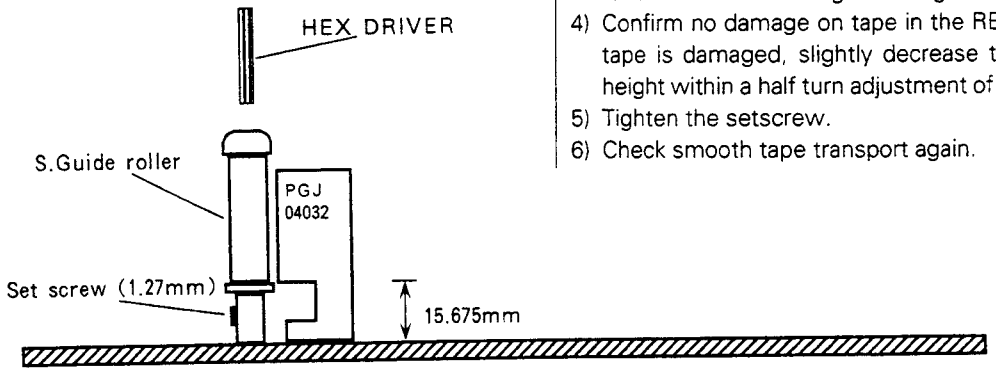

Fig. 2-7-2

No.	Item	Adjustment and Check
3	**Take-up guide pole height adjustment**	• Required implements: · Height gauge (PGJ04032) · Thin tape (SE-240) 1) With the height gauge set on the main deck, check the height of the upper surface of the lower flange of the guide pole. 2) If it needs adjustment, turn the screw on the top of the guide pole to adjust the guide pole height. 3) With a thin tape loaded in, fine adjust the guide pole height in the Play mode so that the tape smoothly runs on the lower flange of the guide pole. 4) Again check the tape transport as a whole.

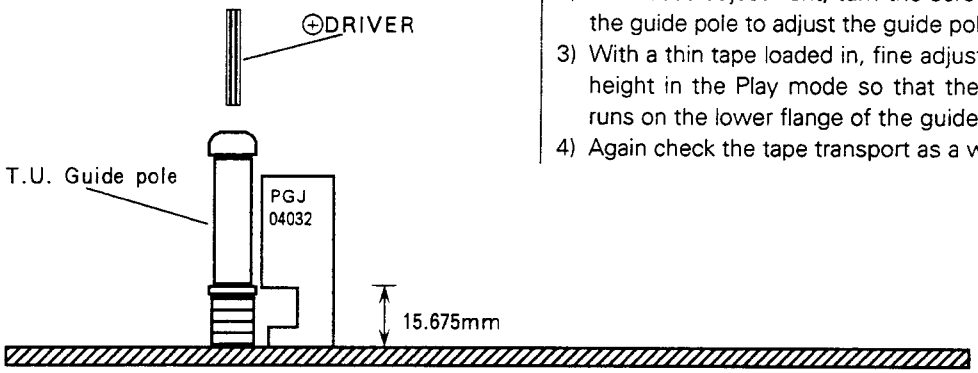

Fig. 2-7-3

No.	Item	Adjustment and Check
4	**Guide arm roller height adjustment**	• Required implements: · Height gauge (PGJ04032) · Guide arm height adjusting driver (PGJ04036) · Thin tape (SE-C30) 1) Turn off the power. 2) Set a height gauge on the main deck's cut surface in the right side of the capstan motor as shown in the figure. 3) Turn the loading motor counterclockwise by hand while checking the height of the lower face of the upper flange of the guide arm roller. 4) If the height is out of the specifications, insert the guide arm height adjusting driver into the hole of the main deck and adjust the height. 5) With a thin C. cassette tape loaded in, check that the tape smoothly runs on the upper surface of the lower flange of the take-up guide pole both in the FWD and REV modes. (Tape travel height is not changed when the mode is shifted between FWD and REV.) 6) If there is damage or wrinkle observed in the tape, repeat the above steps 1) and 5) for smooth tape transport.

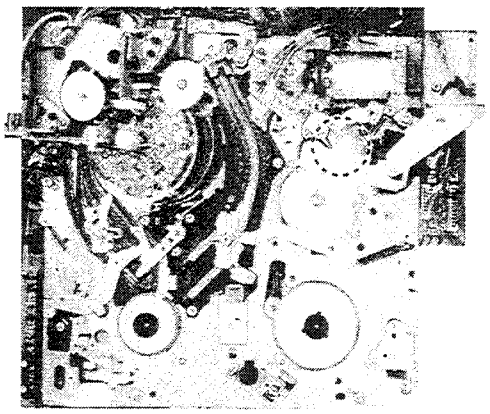

Fig. 2-7-4

Turning driver clockwise: Height increases.
Turning driver counterclockwise: Height decreases.

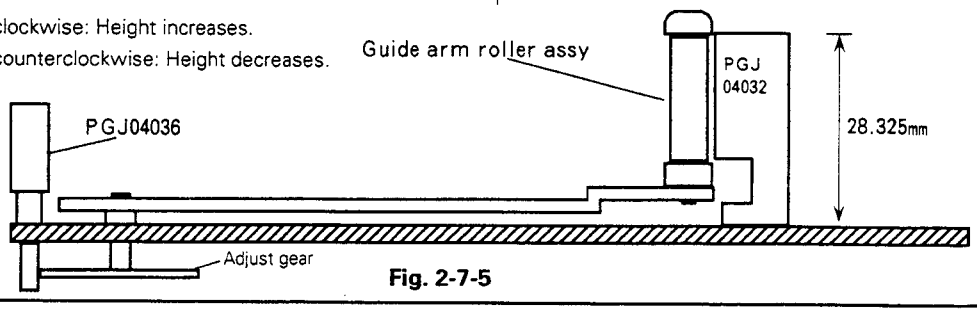

Fig. 2-7-5

No.	Item	Adjustment and Check
5	**Tension pole perpendicularity (vertical centering) check**  **Fig. 2-7-6**	• Required jig: · Parallel check plate (PGJ04035) 1) Turn off the power once and set SW1-1 of the DIP switch on 3 1 M. CTL & R. SERVO board to ON. Then turn on the power switch again. 2) Again turn off the power when the mechanism enters the loading end position. 3) Press the flat surface of the parallel check plate against both of the supply guide shaft and the supply guide roller to check the perpendicularity of the tension pole. 4) If there is a gap between the parallel check plate and either side of the tension pole, adjust the perpendicularity of the tension pole. 5) After the above adjustment, totally check the tape transport system and the reel servo circuit (see 2.5).

SECTION 3
ELECTRICAL ADJUSTMENT

3.1 PRECAUTIONS

- Before proceeding to any electrical adjustment, it is the firstprerequisite to confirm that the objective item is out of order or of breakdown.
  Moreover, for parts and items that need correct mechanical adjustment prior to electrical adjustment, begin by confirming that they are exactly mechanically adjusted.
- Make sure to start electrical adjustment 5 or more minutes after the power is turned on.
- Adjustment procedure of the reel servo circuit is described in the previous section 2.5 "Adjustment of Reel Servo Circuit".

3.1.1. Required tools and test instruments

Besides the special implements shown in Fig. 3-1-1, the following test instruments are necessary for electrical adjustment.

- Frequency counter (10MHz or more and 100mV or less in the sensitivity)
- Video signal generator (TG-7/2, Model 1411, or equivalent)
- Waveform monitor (1485R or equivalent)
- Digital voltmeter (available for $1mV_{DC}$ or under)
- Sweep signal generator (100kHz to 10MHz, or equivalent)
- Oscilloscope (dual-trace type, for more than 50MHz)
- TV monitor
- Vectorscope (521A or equivalent)
- Audio tester

Extension boards		Carrier checker
1. PGJ05043 for R/P Y, R/P C, R/R C-2, TBC-1 boards. 	2. PGJ05044 for OUTPUT, Y COMB, R/P ADJ, AUD-2, AUD-3, U-VCR Y/C OUT AVM/ONSC, TBC-2, TBC-3, FUSE boards. 	PGJ05008-2 Alignment tapes	**7-pin output conversion cable**	**7-pin input conversion cable**
(See page 3-2.) 	PGJ05018  7-pin(male)-BNC×2	PGJ05028  7-pin(female)-BNC×2

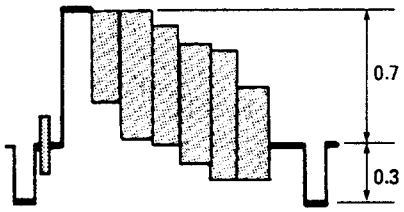
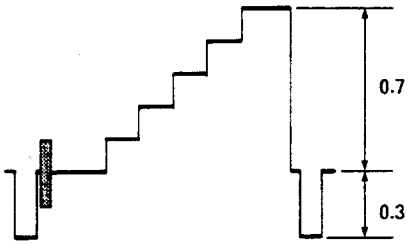
3.1.3 Signals required for video system adjustment

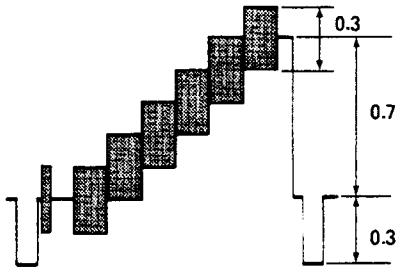
1) EBU 75% color bar



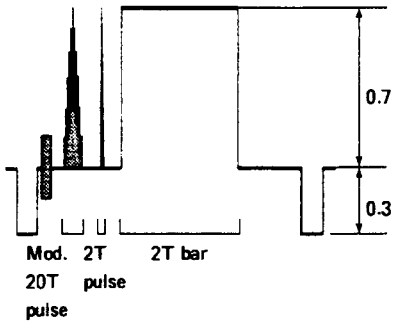
2) Stairstep (5 steps) signal



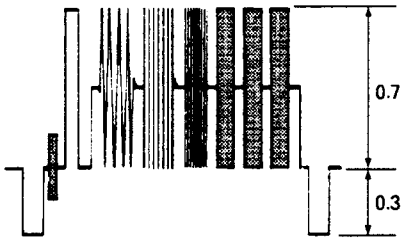
3) Modulation stairstep signal



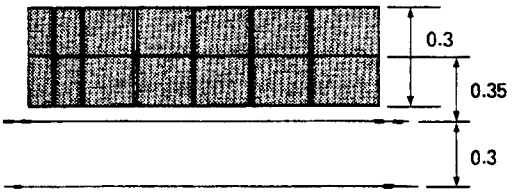
4) Pulse and bar signal



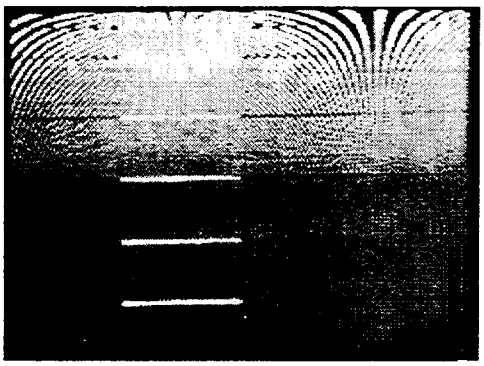
4) Multiburst



6) Video sweep signal (100kHz to 5MHz)

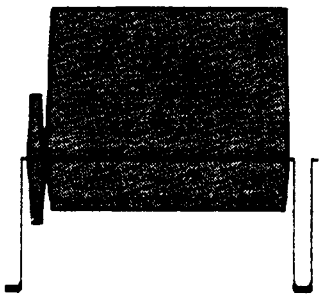


To supply this signal through the LINE IN terminal, make sure to use a sweep signal having a good characteristic in the H correlation in order to avoid erroneous operation of comb filters. For a reference, a signal having a good H correlation shows such a clear pattern as neighboring black and white lines are the same in the width and the interval on the monitor as shown in the figure below.

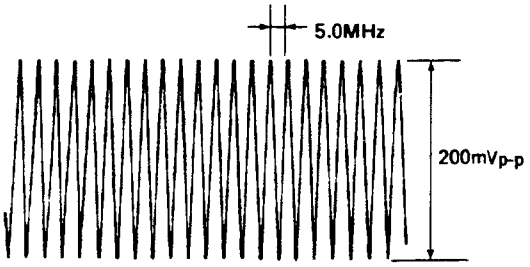


7) Blue or Yellow signal

Another monochromatic signal is substitutable.
Use of any monochromatic signal whose color level is high makes adjustment easy.



8) Sine wave (5.0MHz)



3.1.4 Main boards location

In the following sections, P.C. boards on which check points, adjustment parts and DIP switches are provided are indicated by board numbers respectively. The photo below shows only P.C. boards for which check and adjustment may possibly be required.

Note:

One adjusting, set switches and controls on the front and rear panels to the respective default setting (setting position at shipment) unless otherwise specified.

Before adjustment, set the following switches as indicated below

– MEMORY switch –

No.201(DOLBY NR) : "OFF"

No.313(PB/EE・PB) : "PB/EE"

(For resetting manner of the memory switch, refer to the section 1.)

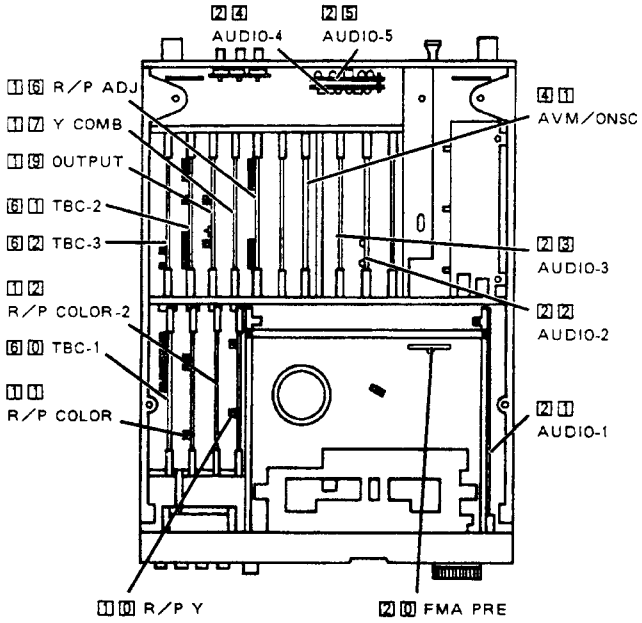


Fig. 3-1-2 Location of main P.C. boards

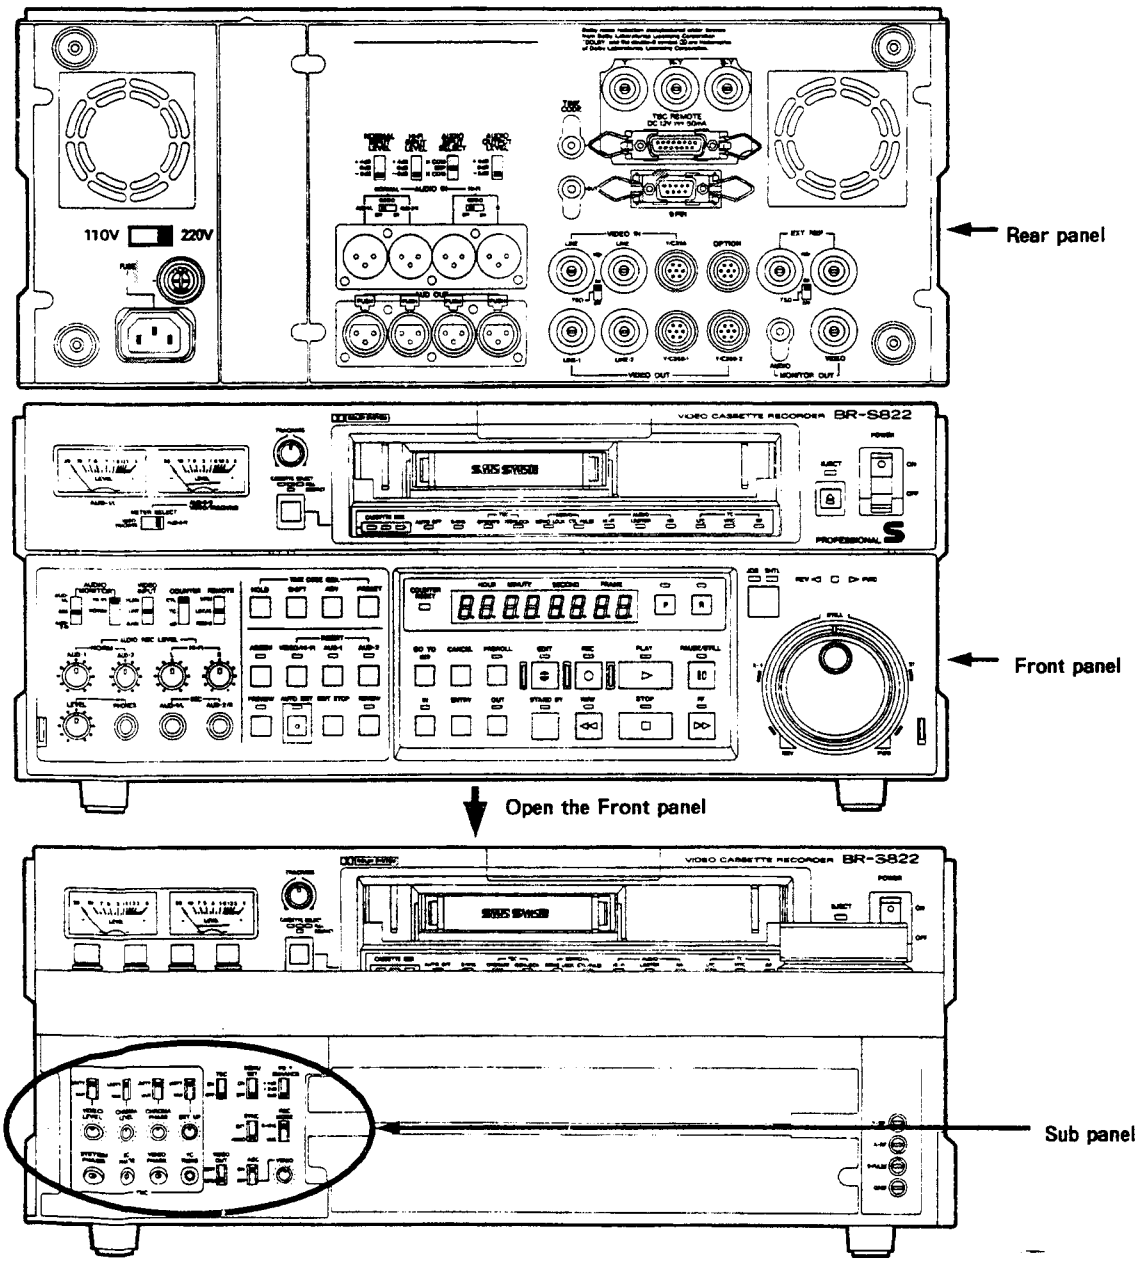

Fig. 3-1-3 Initial setting of front and rear panel switches at shipment

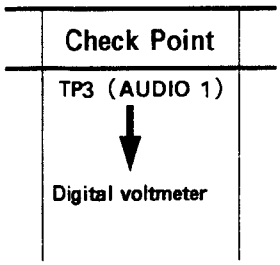
3.1.5. Explanation of main columns in check and adjustment table

1. "Check Point" column

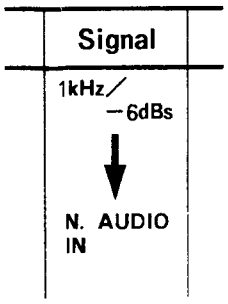


The Check Point column indicates measuring instrument(s) to be used besides test points to be connected with it.
However, oscilloscope is not indicated except for audio adjustment.
In case of the example on the left, connect a digital voltmeter to TP3 on the AUDIO 1 board.

If no measuring instrument is specified for check and adjustment of the audio circuit, use an audio tester.
This column indicates not only test points on P.C. boards but also terminals on the rear panel. In such a case, connect a measuring instrument directly to the specified terminal.

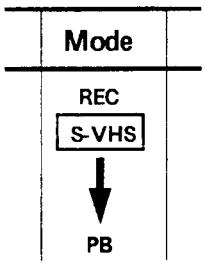
a. HiFi AUDIO OUT = HiFi AUDIO output terminal (XLR connector)
b. N.AUDIO OUT =NORMAL AUDIO output terminal (XLR connector)
c. Y/C 443 OUT,Y OUT, C OUT = Y/C 443 output terminals (7-pin connectors)
Note: Y or C output to be connected with a measuring instrument is indicated in this column.
d. COMPONENT = Component (Y,R-Y,B-Y) output terminals (BNC connectors)
Note: One of Y , R-Y and B-Y connectors is specified in this column for connecting a measuring instrument.
e. VIDEO OUT = LINE output terminal (BNC connector)

2. "Signal" column



The Signal column indicates signals to input as well as terminals to input the signals.
if no input terminal is specified, input signals to the LINE IN terminal.
In case of the example on the left, input 1 kHz/−6 dBs signal to the NORMAL AUDIO input terminal.
In case of adjustment with an alignment tape being played back, its part number and the segment to be played back are indicated in parentheses.

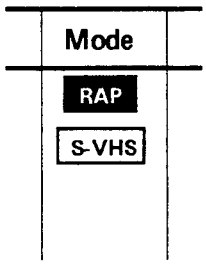
3. "Mode" column



This column indicates operation mode of the set for adjustment.
Since this set has two recording modes of "S-VHS" and "VHS", set the REC MODE switch on the sub panel (inside the front panel) to the specified position if one of them is indicated in this column.

When "VHS" mode is specified, use a VHS cassette tape, while use an S-VHS cassette tape for "S-VHS" mode. if neither mode is specified,the mode does not matter.
Note: Make sure to use double-coated tape for measurement. (If not, measurement value may be incorrect.)

4. About RAP mode



For items having RAP indication in the "Mode" column, set the switch S1 on the R/P ADJUST board to "RAP" position and set the mode to the STANDBY ON (STANDBY and STOP LEDs will come on).
Then, select "06" of the adjustment mode.
If "06" is not selected, it may cause abnormal triggering.
(For setting of the adjustment mode, refer to the section 1.9 "Adjustment mode".)

In the above condition, change over the switch S2 (between RAP1 and RAP2), and real time observation of CH1 (RAP1) and CH2 (RAP2) waveforms that were recorded by the same set becomes possible.
For this observation, set and trigger oscilloscope as mentioned below.

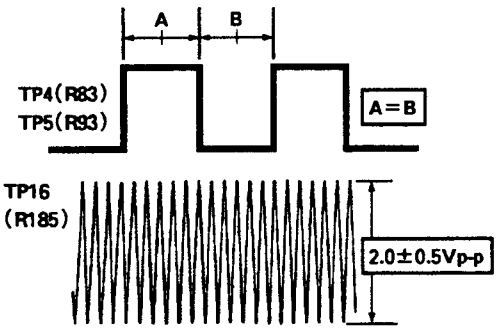
V-rate : with signal from TP11
(R/P ADJUST-3E)
Minus (−) slope
H-rate : with signal from TP10
(R/P ADJUST-3E)
Minus (−) slope

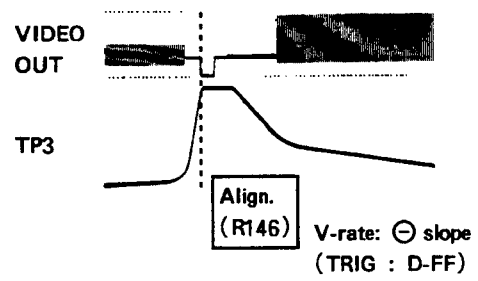
Note: There is a slight difference between two signal levels of one measured in the RAP mode and the other measured in playback of signal recorded and by the same set. Therefore, do not use this RAP mode for items other than those indicated with it.

3. 2 D/C SERVO CIRCUIT

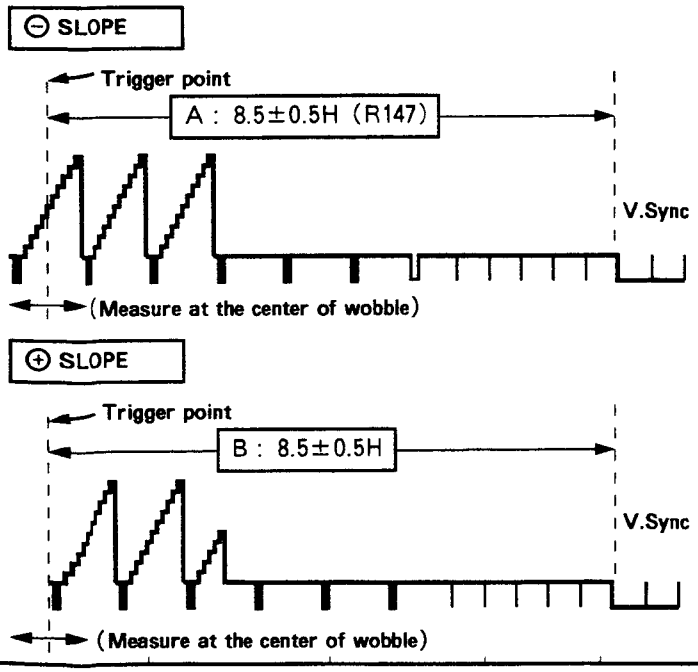
Note • Unless otherwise mentioned, check points and adjustments are on the D/C SERVO bord.

No.	Item	Check point	Adjustment	Signal	Mode	Check and Adjustment
1	**Capstan FG duty factor & level**	TP4 TP5 TP16	R83 R93 R185	Color bar	REC S-VHS	1) Adjust R83 so that the duty ratio of the capstan FG pulse at TP4 becomes fifty-fifty. (A=B in the figure). 2) Adjust R93 so that the duty ratio of the capstan FG pulse at TP5 becomes fifty-fifty. (A=B in the figure) 3) Adjust R185 to obtain 2.0±0.5Vp-p as the signal level at TP16. ***Note When waveform fluctuates, adjust the maximum waveform level to be 2.0Vp-p.*** 4) Confirm that the duty ratio at TP4 is fifty-fifty still.
2	**Tracking preset**	VIDEO OUT TP3 (D/C SERVO)	R146	Color bar	REC S-VHS ▼ PB	1) Confirm that the TBC switch is "OFF". 2) Set the tracking control to the center click position. 3) Record the color bar signal and play it back. 4) With the color bar signal being played back, adjust R146 to coincide the falling point of V sync signal from the VIDEO OUT with the rising point of TP3's pulse. ***Note With the tracking control set to the center click position, confirm that the tracking meter reads the maximum value.***
3	**PB switching point**	VIDEO OUT TP9 : D.FF (D/C SERVO)	R147	MHPE	PB	1) Confirm that the TBC switch is "OFF". 2) Play back the alignment tape MHPE. ***Note Adjust the TRACKING VR to the best tracking position.*** 3) With an oscilloscope which is set for ⊖slope and externally triggered with TP9's signal, adjust R147 so that "A" shown in the figure becomes 8.5H. 4) With the oscilloscope set for ⊖slope, confirm that "B" shown in the figure is 8.5±0.5H.





— VIDEO OUT (TRIG.:D.FF) —



3. 3 AUDIO CIRCUIT

Note • **All adjustment values are balanced values with 600Ω resistance.**
• **Turn off the memory switch No.201 (DOLBY NR) unless otherwise indicated.**

			R12: 10I (R/P Y)	Color bar	REC VHS ↓ PB	1) Adjust R12 to obtain 1.00 Vp-p as Y level at the VIDEO OUT terminal in the VHS mode as well as the S-VHS mode.
18	**PB VCO**	TP5: 13H (R/P C) TP5 : 2.2V_{DC}	C77: 12G (R/P C)	MHVE-2H	PB	1) With the alignment tape MHVE-2H being played back, adjust the TRACKING VR to the best tracking position. 2) Adjust C77 so that DC level at TP5 becomes 2.2 V_{DC}.
19	**PB subcarrier**	TP6: 12F (R/P C) ↓ Frequency counter	R9: 12F (R/P C) TP6 : 4.433619MHz±5Hz	MHVE-2H	PB	1) With the alignment tape MHVE-2H being played back, adjust the TRACKING VR to the best tracking position. 2) Adjust R9 so that frequency at TP6 becomes 4.433619 MHz.
20	**E-E Pilot Burst phase**	TP4: 8I (R/P C) 	R8: 6I (R/P C)	Color bar	E-E	1) Connect the oscilloscope's CH1 input to TP4 on the R/P COLOR board. 2) Supply the scope's CH1 output to a vectorscope while supplying S.C. output of a signal generator to its EXT. REF terminal. 3) Adjust the phase of the burst signal by the PHASE VR so that the signal is normally positioned in the vectorscope screen. 4) Adjust the level of the burst signal by the LEVEL VR so that the burst signal level accords with the circumference of the vectorscope screen. 5) Adjust R8 so that the phase of the pilot burst signal meets the U axis at an angle of 270° (in a downward direction).

No.	Item	Check point	Adjustment	Signal	Mode	Check and Adjustment
21	REC color level	TP3:1C (R/P ADJ)	R12: 4B(CH1) R11: 5B(CH2) (R/P ADJ)	MHVE-2H	PB	***Note For grounding of this adjustment, use any TPGND6 other than TP GND.*** 1) Play back the MHVE-2H alignment tape. ***Note Adjust the TRACKING VR to the best tracking position.*** 2) Adjust the oscilloscope's GAIN control to set the CH1 output level at TP3 for 4.0 scale divisions.
				Color bar	REC S-VHS ↓ PB	3) Record the color bars signal and play it back. 4) Adjust R12 so that the level of waveform at TP3 is 5.0 scale divisions (+2dB as against the alignment tape) on the oscilloscope. If a satisfactory result cannot be obtained: a) Roughly turn R12. R12 ◯ : increases the colour level. b) Repeat the adjustments of the steps 3) and 4) of this item. 5) With the MHVE-2H alignment tape being played back, set the CH2 level for 4.0 scale divisions on the oscilloscope in the same manner as above. ***Note Adjust the TRACKING VR to the best tracking position.*** 6) Adjust R11 so that TP'3 level becomes for 5.0 scale divisions in the same manner as above. If a satisfactory result cannot be obtained : a) Roughly turn R11. R11 ◯ : increases the colour level. b) Repeat the adjustments of steps 5) and 6) of this item.
			R10: 4B(CH1) R9 : 4B(CH2) (R/P ADJ)	MHVE-2	PB	7) In the same manner as for the S-VHS mode, adjust for the VHS mode. 8) With the MHVE-2 alignment tape being played back, set CH1 and CH2 levels for 5.0 scale divisions respectively. ***Note Adjust the TRACKING VR to the best tracking position.***
				Color bar	REC VHS ↓ PB	9) Record the color bar signal and play it back. 10) Adjust R10 and R9 so that TP3's level becomes for 4.5 scale divisions (−1.0dB) as against the level of the alignment tape on the both channels. If a satisfactory result cannot be obtained: a) Roughly turn R10(CH1) and R9(CH2). R10 (R9)◯ : increases the colour level. b) Repeat the adjustments of steps 9) and 10) of this item.

3. 5 SUB PANEL CIRCUIT

Note
- **Subject of the following adjustments is the BR-S822E/BR-S622E equipped with the SA-T22E(TBC-1,2,3 boards).**
- **Before proceeding to the following adjustment, make sure that the TBC-1,2,3 boards are correctly adjusted.**
- **Unless otherwise indicated, all check points and adjustment parts are located on the SUB PANEL board.**
- **For check and adjustment of this circuit, supply color bar signal to the EXT. REF IN terminal of the VIDEO LINE IN connector.**

No.	Item	Check point	Adjustment	Signal	Mode	Check and Adjustment
1	**Video phase**	VIDEO OUT (75Ω terminator)	VIDEO PHASE VR	Color bar	E-E	1) Set the switch SW3 on the TBC-1 board to "NORM". 2) Adjust the oscilloscope's GAIN control so that the portion "A" (see the figure) of the out put waveform from the VIDEO OUT becomes for 4.0 scale divisions on the scope. 3) Set the switch SW3 to "ADJ". 4) Adjust the VIDEO PHASE VR so that the portion "A" (see the figure) of the output waveform from the VIDEO OUT becomes for 4.0 scale divisions on the oscilloscope. 5) Return SW3 to "NORM" position.
2	**Genlock H phase**	VIDEO OUT EXT. REF. OUT (75Ω terminator)	SYSTEM PHASE VR	Color bar	E-E	1) Set the switch SW3 to "ADJ". 2) Obeserve output waveforms at the VIDEO OUT and EXT. REF OUT terminals. 3) Adjust the SYSTEM PHASE VR so that the two waveforms mentioned above become the same in the phase (to be the same waveform). 4) Return SW3 to "NORM" position.
3	**Genlock SC phase**	VIDEO OUT (75Ω terminator) ↓ Vectorscope	SC PHASE VR	Color bar	E-E	1) Set the switch SW3 on the TBC-1 board to "ADJ" position. 2) Connect a vectorscope's A INPUT terminal to the VIDEO OUT terminal and B INPUT terminal to the EXT. REF OUT terminal. 3) Trigger the vectorscope externally (B-INPUT). 4) Set the vectorscope's PHASE and GAIN controls to position the burst signal of the B INPUT terminal correctly. 5) Adjust the SC PHASE VR to position the burst signal of A INPUT correctly. 6) Return SW3 to "NORM" position.

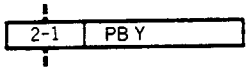
SECTION 4
DIAGRAMS AND CIRCUIT BOARDS

■ FOREWORD

1. Expression of connector

Connector is expressed in two ways.

1) The following illustrates 'CN2 pin 1' for example.



2) The following illustrates 'CN1 pins 1 and 2'.

2. Expression of wiring

As the following circuit diagram is divided to print on some sheets, such an indication as the following is found in the case the wiring extends over two or more divided sections.

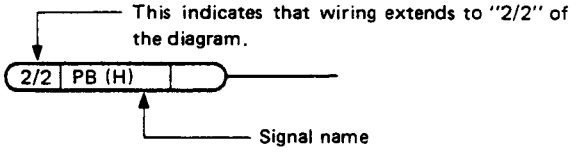
1) Circuit diagram divided into two or more sections:

Board No.	Board Name	Number of divided sections
02	MOTER-2	2 (1/2~2/2)
10	REC/PB Y	2 (1/2~2/2)
12	REC/PB COLOR	2 (1/2~2/2)
19	OUTPUT	2 (1/2~2/2)
21	AUDIO-1	3 (1/3~3/3)
23	AUDIO-3	2 (1/2~2/2)
31	M CTL/REEL SERVO	2 (1/2~2/2)
—	OVERALL	2 (1/2~2/2)

2) Indication of wiring which extends to another section:

(Example)

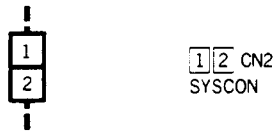
On the "1/2" diagram of REC/PB Y board, such an indication as the following is found on the "PB (H)" signal line.



In the above case, the end of the wiring is connected to the "2/2-PB (H)" on the 2nd section of the diagram.

3. Wiring of connector

(Example)



In the above example, CN1 is connected with CN2 on 1 2 SYSCON board.

4. Signal flow on the diagram

The following arrow marks indicate the specified signal paths respectively.

- ➡ : RECORDING or EE signal path
- ⇨ : PLAYBACK signal path
- ⇨ : REC/PLAY signal path

5. Measurement of voltage and waveform

1) Voltage

Measured by digital voltmeter in REC mode.

Value in ( ) shows voltage in S-VHS PB mode, and it is indicated only in the case PB voltage is different from that in REC.

2) Waveform

Video: Unless otherwise indicated, (a) color bars signal input through LINE IN terminal in REC in S-VHS mode, (b) color bars signal of MHVE-2H alignment tape in PB.

6. Unit of value

Unless otherwise specified:

1) Resistance is in Ω (1/6 W)
2) Capacitance in μF
3) Inductance in μH
4) Screened parts (in ▒▒) are important for safety assurance. When replacing them, use specified parts.
5) Circuit board diagrams are printed as viewed from the back side of respective boards unless otherwise remarked.

4.2 REPLACING SUBMINATURE "CHIP" PARTS

1. General description

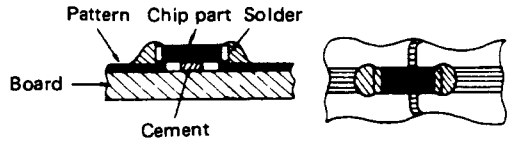
Some of resistors, variable resistors, shorting jumpers (0 Ω resistors), ceramic capacitors, transistors, diodes are chip parts. Those removed once cannot be used again.

2. Replacement of chip parts

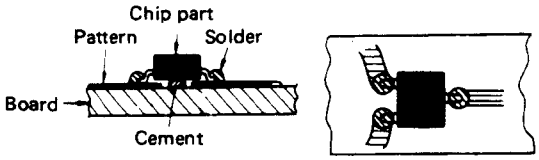
Replacement of chip parts should be performed as follows. Use a soldering iron (17 W for 260–30°C approx.) that has sharp-pointed tip and high performance in insulation.
It is more convenient to use a soldering iron with solder absorber (55 W approx.).

(1) Soldered condition of chip parts

- Resistors, capacitors, etc.



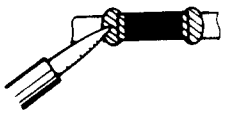
- Transistors, diodes, etc.



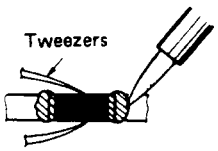
(2) Removing of chip parts

- Resistors, capacitors, etc.

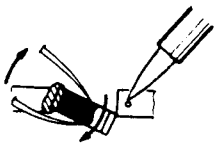
i) Melt solder at a side.



ii) Holding the chip with tweezers, melt solder at the other side.

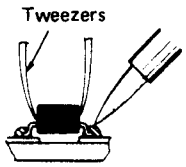


iii) Take off the chip in twisting and sliding motion.

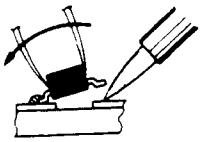


- Transistors, diodes, etc.

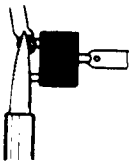
i) Melt solder at the side of single lead.



ii) Lift the unsolderd side upwards.



iii) Simultaneously melt solder at two leads of the other side and pull up the chip.

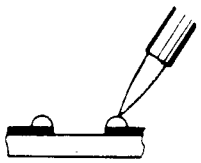


(3) Preheating and soldering of chip parts

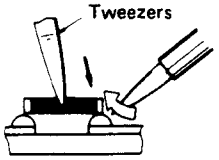
Except transistors, make sure to preheat all chip parts, capacitors in particular, with a hot wind of 150°C approx. (of a hair dryer, etc.) for 2 minutes just before soldering, and immediately solder by a soldering iron of approx. 30 W.

(4) Attaching of chip parts

i) Heap up a proper amount of solder beforehand.



ii) Holding down a new chip by tweezers, solder it to the board by a soldering iron to melt solder from its lower part to the upper part (in the direction shown by a big arrow).



Note:
- Don't heat chip parts over 3 seconds.
- Don't rub electrodes.
- Don't use chip parts which were once removed.
- No cement is required.

3. Shapes of transistors & diodes
